1862. Transatlantic DX

Yahoo group: skywavesmw
Date: 2009-03-22 11:04:38 UTC
From: peter40blue
Topic: 1857 Message: 1862

I have just joined this group and I have been licensed for over thirty years(GM0PKF) I am now going back to my roots listening again to SW/MW broadcast stations where I begun.
My station is a Palstar R30CC and two EWE antennas, east west and north south respectively.
My first encounter when switching on my receiver was BT power line adopters causing interference
across all the broadcast bands, this wasn't noticeable on the HF bands, I have since found out the adopters are notched for these frequencies. However, I am pleased to say OFCOM have now resolved this issue and I am looking for DX on MW.
Its probably not the best time of year for transatlantic MW DX but I would appreciate any advise on where to listen and when. I did hear country music on 1512 KHZ but I believe this to be a
possible pirate Irish station, have you heard it?

Kindest Regards: Peter

Peter,
Welcome to the group, sounds like we have walked a similar time line hi!
There are a few amateurs in the group, look forward to catching you on 80m,
3.760 daily 0900 hrs.
72, Brian, G0NSL-QRP.

Welcome Peter.

(Apologies to Peter for the sudden appearance of all Peter's messages. I forwarded them all together in haste as they had been queued for more than 24 hours. New member's firsts posts are automatically moderated to prevent spam and I had been away for a few days and so was unable to un-moderate him)

Medium wave has always been a favourite of mine - DXing since the late 70s.

Nice to hear you have the BT interference resolved. I am getting a little of this on HF but it is not a major problem. After seeing BT vans in the vicinity this morning I wonder if my MW DXing days are numbered. Fingers crossed nobody has BT installed anywhere near me. Virtually everybody around me uses Virgin Cable so there may be little danger of BT taking over.

I wonder how you fared with the MW season this winter Peter? This winter has seen some remarkable conditions and it looks like the solar minimum is not showing any signs of climbing towards a maximum. Some predictions say we are at a hundred year low and the next solar maxima might be lower than the minimaof recent years. If this is the case we could be in for another excellent season next winter!

My pride and joy here in the Midlands was the reception of 680 KBRW on four separate occasions. This is the first time I have receved this from home. I also had many other Prairie and west coast catches using my Perseus SDR and ewe antenna. I wish I had converted this to the flag sooner. For your information, the ewe antenna can be improved by converting it to a "flag" antenna. All you need to do is disconnect each vertical from ground and join a bottom wire between the two wires. Directivity is improved.

Conditions are not so good now we leave the winter period and so this forum may be on the quiet side until the autumn.

Good DX!

1866. Monitor interferance

Yahoo group: skywavesmw
Date: 2009-03-27 11:55:46 UTC
From: digitalspirit01
Topic: 1866 Message: 1866

Hi all I have my setup near my PC monitor a 17" Compaq, and needless to say I get noise from that affecting my receivers.

If I were to get a 17" flat screen LCD would that be any better?

TIA,

Mike.

Mike;
I have a 21" Samsung computer monitor (not LCD) and if I keep my receivers and ant coax approx. 3' away and to the side, I get no interference from either the monitor or the PC..your results may vary..

If you have a portable receiver, you could carry it around the room looking for the least amount of interference, then set-up there--just a
thought..and NEVER pass up the opportunity to purchase another receiver (Lol)

1873. PC Screening

Yahoo group: skywavesmw
Date: 2009-03-28 18:14:33 UTC
From: Michael Rae
Topic: 1873 Message: 1873

Hi Group. No one seems to hit on the words SCREENING both for the screen itself be it CRT or LCD and the box its in, or the make up of same, some being linned with tin foil, others being made of metal, then we come to the leads how good are they, my very old CHEAP laptop sits above all my gear be it ham or normal receivers, its a toshiba CT 4000 with WINDOWS 2000 onboard I use it for Ham Radio Delux so the leads go right into the transceiver, no EMC at all. At one time I had a kite marked printer it was a cannon I had EMC interfence everywhere, even phoned them, the reply was "oh your listening to Medium Wave and Shortwave, you had me worried there for a moment" why I asked, "Was thinking the EMC was coming out on VHF" end of story, I never got any cannon PC stuff after that. Mike in Suffork.

1874. Skywaves Website Update

Yahoo group: skywavesmw
Date: 2009-03-28 19:20:19 UTC
From: John Faulkner
Topic: 1874 Message: 1874

The hacking of the Skywaves website last year caused more damage to the group than may have been immediately obvious. For one thing, the stats have taken a steep dive. We were receiving almost 7000 unique visitors a month last year, but since we have been back online our hit rate has dropped with only 849 unique hits registered this March (290 in February). The ClustrMaps link on the home page does not show all visitors but shows a good spread of people looking in from across the world.

But it has been encouraging (and a surprise which I discovered today) that almost 30 members have already registered with the site for the purpose of submitting online DX loggings or to have their own blog page/web pages, hosted freely within the site. These are the next phases of construction of the website. Over the next week I will be getting to grips with the 'Extranet' side of the site so members will be able to do these things. You may have noticed that the new 'Online Logbook' has appeared and is 'under test'. A TV DX logbook will be added in the next few days.

This has all taken a lot longer than we would have liked, but we thought it would be better to get the site back online and build it while you all watch, or take much longer until it was complete but not have a site online at all until completion. This means that you will see all the constructional mess as it happens and there will be bits of the site that don't work to begin with.

There was even a point when I was contemplating giving up the site altogether and offering it freely to a good home, such has been the slow progress of development. It hardly seemed fair on the group as a whole to be taking so long. We have experienced many problems along the way, not least having the hosting account accidentally closed down by the hosting company and several moves to different servers so we could take advantage of the appropriate server software.

At least the new Skype chat is working tremendously well and there are more than 20 members already registered. We have never seen this room so busy and we haven't even reached the DX season yet!

Once again, thank you for your patience. We're getting there!

John

Hello Glenn.

This will have been Radio Reloj (Spanish for "Radio Clock") from Santa Clara in Cuba. They have a more ID of "RR" at the top of the minute after the tone.

Cheers

John

Hi Glenn.

I am not sure about the tones being different on a Sunday so I can't really help you there. I'm quite certain you must have had R Reloj though.

The 570 transmitter is one of the more commonly heard of the Cuban transmitters. You could also listen for the same programmes on 790, 820 and 870 to mention but a few. There are also other services from Cuba you may hear such as R Rebelde on 620 and 1180. These can provide quite good signals some mornings.

Is this your first transatlantic medium wave DX? You may have been bitten by the bug now! :-)

Look around local sunrise for stations like:

750 CBGY Bonavista Bay, Newfoundland (CBC radio 1 English programming)
1010 CFRB Toronto, Ontario
1390 WEGP Presque Isle, Maine.
1400 CBG Gander, Newfoundland (CBC radio 1 English programming // 750)
1470 WLAM Lewiston, Maine
1510 WWZN Boston, Massachusettes
1520 WWKB Buffalo, New York
1540 CHIN Toronto, Ontario (often Chinese programming)
1560 WQEW New York City, NY (Radio Disney)

You should be able to hear these without too much difficulty, conditions permitting.

Let us know how you get on.

Good DX!

John

1882. Medium WAVE/BC receiver

Yahoo group: skywavesmw
Date: 2009-04-07 07:42:42 UTC
From: Michael Rae
Topic: 1882 Message: 1882

Hi All. Was there not a dedicatedly made receiver from the US a few years back, it had the right filters ect and was portable I think also PW did a review on it, anyone recall it?

1883. Re: [skywavesmw] Medium WAVE/BC receiver (Perseus)

Yahoo group: skywavesmw
Date: 2009-04-07 10:22:32 UTC
From: John Faulkner
Topic: 1882 Message: 1883

Since the mid 90s the popular MW DX receiver was the AOR AR7030 communications recever. This really set the standards for such receivers and was considered by some to be the best MW DX receiver in the world. Since then SDR technology (the 'software defined radio') has taken over for many with receivers like Winradio and Perseus which now give you the ability to record sections of the broadcast spectrum.

I bought the Perseus SDR last year and it has transformed my MW DXing. I am now able to record the entire long wave and medium wave bands (1600kHz bandwidth, though the actual available bandwidth is around 2MHz) and I can literally play back the band in real time, making use of all the filters, modes, etc. EXACTLY as if I was tuning the receiver in a live situation. Some argue that this is cheating but there is no way I would be able to sit behind the receiver all hours of the night, every night.

Playing back the recordings is not as time consuming as you might think as you select the tops and bottoms of each hour for IDs. You know if a station is present by looking at the signals on the waterfall display. The procedure takes as little or as long as you like, depending on how much time you want to DX of course, but the conditions also dictate this. For me this is usually done in an hour or usually less as I target certain stations depending on the conditions.

Since owning the Perseus I have added 50 new North American catches to my personal all-time MW DX log, taking it up to around 350 stations. This includes many stations in states and provinces like Wisconsin, Michigan, Texas, Nebraska, South Dakota, British Colombia, Alberta, Saskatchewan and Manitoba and even ALASKA! Without the Perseus I would not have heard these stations. The fact is that rare DX like this may have been there all along over the years, but Perseus has simply helped me not to miss them now.

So if you are looking for a good MW DX receiver I would recommend the Perseus.

http://www.microtelecom.it/perseus

Most people argue that the performance of the Perseus is superior to that of the AOR AR7030, although there is debate regarding sensitivity and audio quality because Perseus is a digital receiver and therefore has a more 'digitally processed' kind of sound quality, but they are both very close whichever way you look at it.

No, this is not an advert for Perseus, but it has taken over as THE MW/SW DX receiver. Since you mentioned a dedicated receiver Michael I thought I would bring this to your attention, and to others who may not

be aware of the Perseus. You need a fairly powerful computer to run
Perseus, but most machines these days are actually more than adequate.
This is digital technology working in favour of the DXer!

Check back through the posts on this group to see my DX loggings made
with the Perseus and my ewe and flag antennas.

Good DX!

John

Topic: 1884 Message: 1884

Hi John and all. One could get a transceicer, my Kenwood TS 450s has some nice filters and I have pulled in quite a bit of MW dx on it, BUT BUT I was hoping that someone could recall that dedicated portable receceiver that was made in the USA, it was a black box about large book size, had a audio take off point, and a digital readout, it was JUST BC/MW coverage, as to the PC receiver yes very nice, but quite a lot of cheating going on there, on a points count in a contest a owners of one of these would always be the winner, where is the challange?. Mike.

Topic: 1887 Message: 1887

Ciao,
on my MW blog I posted non only the full log of BOC 16 (DX meeting in Bocca di Magra, La Spezia, Italy) but also an Italian MW Survey (RAI regional programs and other Italian stations), a Spanish Survey plus Portugal and the TA log (mostly US Stations).

I hope you can enjoy at: http://radio-dx.blogspot.com/

Have nice DXing

Hi

Tried 1380 khz for the first time today and found a Spanish speaking Religious station. Could it be WBTK-1380 Richmond Virginia ??

Many thanks

Pat

Hello Patrice.

That's an interesting one. I have checked the latest Topaz list (http://www.topazdesigns.com/ambc) and have only found one station which looks likely - which is in fact WBTK. Well done if it is this station. It does not look like there are any other candidates.

What time did you hear this?

In the USA there are two distinctive formats: Gospel and Religion. You can do a frequency search for either format on Topaz. I would guess that you had WBTK.

Cheers

John

It is surprising what can come through at this time of year.

Here in Ashfield, I have dismantled my flag antenna for the spring and summer because I need the garden space for other antennas while I become more actively involved in TV, FM DX and amateur radio activity, however, it is worth noting that April and May can still produce a few surprises, so possibly best not to write off the MW DX season just yet. Summer can also produce good DX from South America, albeit in a much smaller time window.

Good DX!

John

So far SA has been pretty poor despite a beverage pointing to it. Not sure if I will ever get good signals, since a lot more land is on its path starting right here.
The last few days I had to retract the beverages to make space for farmers to prepare the land for summer. First I could put the 270° back up and recorded from that, prettty poor results. The 320° is now back up also, and results are much better. One reason: many unwanted arriving from its side are well attenuated so that TA signals get better audible, even when their strength is not much changed. This attenuation mode is the major advantage against an EWE

I did some test to figure out which ones are attenuated, it turns out from Holland and the lower half of the UK. Especially strong 1008 HOL is weakend enough to make 1010 well audible, also 1520 is good when 1521 Gold (Duxhurst) is pushed down, yes a UK LP can be a annoying here.

The 270° cannot achieve that, in fact it just targets them. So I have asked myself why setup the 270° at all, so far it was fairly useless.

Looking at previous loggings, late July into August might be a better
time for South America.

How I wished I lived on a farm. Or even right next to one!

I need to find a radio enthusiast who owns a farm and requires a
lodger! :-) :-) :-)

With 1380 programming such as this, never discount the possibilities of WKDM in NYC, an entirely brokered station, where the "dollar gets the holler". Paid religious and cultural programming in a multitude of languages is the norm for 'KDM; certainly plenty of Spanish has aired there in recent years. -- GREG HARDISON

From: John Faulkner
Topic: 1888 Message: 1896

Hey, thanks for the info Greg. This makes a lot more sense.

Come to think if it, I also heard Spanish on 1380 a few weeks ago, but my logging was of WSYB Rutland VT with two clear IDs. The programming consisted of Spanish renditions of popular English songs from the past. I never got an ID from WKDM but I believe I had them on a couple of occasions.

Cheers

John

I listened to the yesterday mornings recording, I hear SS music, and it is most likely WPYR that I had before. There's an announcement but I do not understand it. The offset fits.
There's another EE in the background with news, the offset is 0Hz.
John did you measure the offset

http://dx.3sdesign.de/unid/1380-unidSS-090414-0400.mp3

Every :00 UKR on -3KHz puts out a nasty news jingle splatter and that stops at :05, so I always miss the ID

Just discovered a recording a day earlier it had "Venezuella" in it
http://dx.3sdesign.de/unid/1380-unidSS-090413-0430.mp3

So, perhaps both are from VEN?

I did not hear a preacher.

No, I do not measure offsets on MW as I am not confident I know enough
about how Perseus works with this.

I am not doing any MW DXing at the moment because of requiring space for
other antennas. My flag is down but will be put up again after summer,
probably during August. At this time of year I tend to concentrate on
TV and FM DX, but also I will be getting involved in 6m and 2m DX this year.

I meant measuring it in one of your recordings, if you still have it.
The procedure is really simple when using my setup, but anyways it isn't all
that important
I do it for all new found tx, since it helps a lot when getting it again in the
future. Probably have contibuted >100 values to mwoffset.txt thi sseason

Links to the only recordings I have should still be available via the
SDR Filesharing group.

http://uk.groups.yahoo.com/group/sdr-filesharing/

Incidentally, I have just downloaded the Kongsfjord file. I am looking
forward to actively taking part on a bit of their DXpedition over the
next day or two, time permitting. What a treat! :-)

Cheers

Pretty good signal this morning
When I started at 7:30 local I listened to CFTR-680 for 40 minutes just to get the news, later on a bit CFGO and WWKB. The grey zone was more than 2000km away
Only at 9:00 all was gone

Yesterday at 0600 local XEX made it briefly over CKAC and I heard sports

1908. *** Skywaves - Available To Good Home

Yahoo group: skywavesmw
Date: 2009-04-22 19:02:41 UTC
From: John Faulkner
Topic: 1908 Message: 1908

After some consideration I have decided to stand down as owner/administrator of the Skywaves groups.

This is something I have been considering on and off for the last couple of years. It is not that my heart is not in it anymore, I just don't have the time to deal with things as much as I would like to. It has been an uphill struggle to get the Skywaves website back to some sort of standard since it was hacked last Christmas.

I am deeply grateful to Lynton Towler who has also spent a considerable amount of time over recent years doing a lot of the coding and the clever stuff behind the site. Also I wish to thank the moderators who have helped maintain the three Yahoo groups we run.

My thinking is that somebody with more time and more site development skills should take over to get things progressing sto teh benefit of the ever-growing membership (which will probably exceed 800 this year). I am no longer doing this justice.

If anybody would like to come forward, the group is there for the taking. But there are a few considerations which I hope any new owner/s would consider. I would like to see that Skywaves continues in all its entities and be further developed. I would also hope to see a continuation of things like the various logbooks (including the Skywaves All Time Log), useful articles, bandscans, the chatroom and to have the Yahoo groups maintained as these represent the heart of Skywaves.

Our biggest success by far has been the Skywaves FM & TV DX group on Yahoo which currently has around 515 members. This has always been very well supported, particularly in summer. All these things come together in the 'package'. So I hope somebody will come forward and offer their services.

I just want to see Skywaves going to a good home, in much the same way you would wish to see a well-loved pet going to a good home.

Thanks.

John

1909. Speaker Cable

1910. PLT QRM and our useless bloody government!

Yahoo group: skywavesmw
Date: 2009-04-23 12:11:28 UTC
From: John Faulkner
Topic: 1910 Message: 1910

I just saw an article headlined on the QRZ group and was hoping for some good news. Since our evil government is involved in this I should have known better.

QRZ post: http://forums.qrz.com/showthread.php?t=201085

Government Response to PLT e-petition: www.number10.gov.uk/Page19025 <http://www.number10.gov.uk/Page19025>

The article:

This is the governments response from www.number10.gov.uk/Page19025 <http://www.number10.gov.uk/Page19025> with regards to the e-petition about powerline adapters.

Thank you for the E-petition demanding a ban on powerline adaptors like the ones currently supplied by BT.

As with all electrical and electronic products sold in the UK, Power Line Technology (PLT) equipment is required to meet the relevant regulations before it can be placed on the market. In particular, it must comply with the Electromagnetic Compatibility Regulations 2006 (the EMC Regulations) which are based on a European Directive, and any person who places such products on the market (usually the manufacturer or the importer) must ensure that the products comply and apply the 'CE' mark.

The Department for Business Enterprise and Regulatory Reform (BERR) is responsible for the EMC Regulations. Enforcement powers are delegated to local Trading Standards offices, and to Ofcom where there is a radio spectrum protection or management issue. Ofcom estimates there are around 500,000 pieces of PLT equipment in use in the UK. Ofcom have received around 84 individual complaints of interference attributed to PLT equipment. All of these complaints are in the process of being investigated or have been successfully resolved. Each complaint is investigated on its own merits. We do not believe an outright ban of all powerline adaptors is justified.

It is often the case that electrical equipment that is used in the home has to comply with the EMC regulations. Some of this equipment has the capacity to cause interference to other radio communications equipment in certain circumstances; this can be due to the manner in which it is installed or operated.

Ofcom can provide advice and assistance to those who complain of interference with radio communications equipment. Any individuals who wish to report specific cases of interference that may be caused by PLT apparatus, or any other source, should contact Ofcom's Advisory Team on

0300 123 3333 for further assistance.

. The UKQRM e-petition was signed by 3,554 people

1912. New Skywaves Owner

Yahoo group: skywavesmw
Date: 2009-04-23 22:29:00 UTC
From: John Faulkner
Topic: 1912 Message: 1912

After my post yesterday concerning giving up ownership of the Skywaves groups I was surprised to receive only one offer.

Anyway, I am pleased to welcome Will Rittman as the new owner of Skywaves. I hope you will join me in offering him a very warm welcome.

All the group's interests will now be owned and operated by Will. You can contact him directly at:

will.rittman@...

or:

Will@...

Here's wishing Will all the best and I have every confidence that he will ensure things run very smoothly for all.

Cheers

John

Yahoo group: skywavesmw
Date: 2009-04-24 04:04:44 UTC
From: Will Rittman
Topic: 1914 Message: 1914

Hi All

This is my 1st post in my new chair as admin so I'd like to welcome you all to the new look Skywaves side at http://www.skywaves.info theres a few new things you with see 2 of which are in the cornor of everypage and they are multilingual support and template changer so you can choose which look of the site you like best.

Ive also added forums and I'm adding a few more things still which i will post. Anyway unfortunatly the old user list could not be converted onto the new site so im afaid you will have to signup again if you were on the old site however this is a 20sec job and entitles you to add article (Audio, Video and Text) and post in the forums. So heres a how to which i will add to the site.

So anyone can signup and add anything releated to to the site. If you goto "submit a article" you can see a huge editor where you can anything from anywhere (pretty much).

There are some buttons at the bottom of where you write 2 of which you can use to add things. The 1st one (AVR Media) is a Audio/video support where you can add videos from any hosting service (IE Youtube). The 2nd (Coder Jumi) is a code adder for your page so you can add HTML JS or anything to your page.

In order to add a image click on the image button on the 4th row of the editor. I use Imageshack for hosting the image and then copy the direct url to the url section in the menu.

Enjoy and Thanks

1917. MW with Mexico

From: Giampiero58
Topic: 1917 Message: 1917

Few tips made on MW from Bocca di Magra (La Spezia) I had 20 burning minutes with a great opening 0405-0425, with many signals but only few ids.

On 1370 I found 5 stations together with similar signal but all on a frequency a little different, the spectrum looked like a small DRM curve... Of course no one was readable

On the air also several Mexican radios. Also on 1400 XEVI, with local comercials from San Juan del Rio Queretaro with 1 KW.

Ciao

Hi Pat
from websearch I came across this

http://members7.boardhost.com/PirateRadio/msg/1219873539.html

An Irish pirate called TCR have just activated a transmitter on 1512 khz. Seems to be getting out quite well and has been heard in Sweden. Its on air 24 hours per day.

Hi,
Can anyone tell me how to subscribe to the Skywaves monthly magazine ???
I downloaded a sample issue No 100, July, 2005 from the website,
but cannot seem to figure out how to receive the recent ones.
Thanks,
72, Brian, G0NSL-QRP.

Hi Brian
sadly it is no longer published
as far as I am aware-
as always too few contributors, printing, postage and paper costs high
Talk of e-zine but that is not happening at the moment
All relevant info is on the list as and when it happens and any articles
can be loaded to file section or Skywaves site member area

1928. Euskadi also on 1476 kHz

Yahoo group: skywavesmw
Date: 2009-07-02 12:24:43 UTC
From: geirstokkeland
Topic: 1928 Message: 1928

Euskadi Irratia recently appeared on 1386 kHz, and last night I also noted them on 1476 kHz, in parallel to 1386. The 1476 outlet appears to be San Sebastian, according to my fellow DXer Bjarne Mjelde. So two open frequencies again "blocked"... I wonder who tipped them off, and how the licensing in Spain worked in this case. 1386 is a move from 1071, while 1476 may be a brand new frq with no ex-....?

Just posted a sound file with reception of Nigeria on 1440 KHz last night in Portugal

http://f1.grp.yahoofs.com/v1/cK6HSnZ85hHtSeoJHCFxg0o6p_fnmw0B-g7tDiWMXGPt7KosqkEbxwYp5CKCz_V8zcg_0jEd18_61Wn89r-mkM4JG38b6h4/Nigeria%201440KHz%201800utc%2015%20Aug%2009.mp3

The audio from Yola 1440 is often undermodulated and has a hum,the music was better than the audio from the announcer's microphone

Voa Botswana 909 KHz co channel with Nigeria and Radio Free Africa Tanzania 1377KHz were quite strong as well.

This morning not much listening done.

Did id WWKB 1520 and ?? CBS News on 870 KHz at 0600 utc

That's very common with Spanish stations David.Distribution is probably by satellite for some hence the delay.

It can be really frustrating/depressing here in Portugal more or less nulling one strong one out and there's another underneath with an echo

Why do the Spanish need so many mediumwave stations and who listens to them in Spain? The FM band is jammed up with the same stations.

Seville (RNE 1 I think)on 684 KHz supposedly puts out 300 KW,I wonder how many "KW per listener"? It's a massive signal about 180KM away in Portugal.

Very good!

Try for Angola 1088 KHz,the carrier if nothing else should be seen on the Perseus as nothing else is on the same frequency.

With or without echo, the problem is the same.
Here I cannot null UK networks like 1053 or 1089. And "local away" of my
SplatAway fails also

> Why do the Spanish need so many mediumwave stations and who listens to them in
> Spain? The FM band is jammed up with the same stations.

Remember the 70's? Spain had little tx and they were off during the night, same
with many other countries. No need for Perseus or other hi-tec rx, a simple
radio pulled them in.

BTW:
Hessicher Rundfunk will close down its two 594 Khz tx by the end of 2008, due
to high financial costs.
Money is the best tx killer :-)

Hi Jurgen and Hugh
Spain does dominate here in UK
The echo which did seem like satellite delay rather than propagation
delay had a consistent delay time pattern.
When the Spanish signals weakened Faro came clear with continuous music.
I also have some strong locals to contend with that defy nulling-even
with phasing.
Ok on simpler receivers in the past-ahh memories!
My listening goes back to mid/late 50s
Oh to have had these receivers then.
I have now added the Quick Silver QS1R receiver to my Winradio 313 and
305, and learning to drive it.hihi
Still have the Lowe HF225 and Fairhaven RD500 all being used one way or
another.
Just need to improve the aerial situation now that I feel more able to
do that.
ps Jurgen : I assume end of 2009?

by the end of 2008, due
to high financial costs.

cheers

> delay had a consistent delay time pattern.

With Perseus you can see & measure the delay between different frequencies in its waterfall when using 1600 kHz width.
AFN was a nice example, 873 / 1107 / 1143 all showed different delays, nice to watch during time pips or speech

> ps Jurgen : I assume end of 2009?

Yes of course 2009

Thanks David

I will give it a go. I used to have an ewe and always thought the 10foot verticals and 25 foot across was critical so I could not point in the right direction as the garden too narrow. But the shorter flag means I can get in right direction !

I will also try in the attic as would be higher up. The gable end would be in the way though, will that matter do you think. The balaun and resistor are in the middle of the 2 verticals I see

Topic: 1953 Message: 1959

my flag is beaming directly to the side of roof but it doesnt affect it . if you are putting it in the attic put it roughly up then check for noise i am lucky as my place is VERY rf quiet and only nose i have is from tv down stairs but that gets switched off at night. also put ferrite on coax at feed point then as many as u can along the coax run as every bit helps. in the day time my noise level on a clear freq on mw is 0-1 and in evening/dawn is s1-2 but thats after alot of tweaking and ferrite but well worth it in the end. as for feed yes mine is fed in middle of vertical leg and resistor is in middle of opposite but you can do it in the bottom corner if its easier. its easy for me to adjust etc as my shack is in the attic and the flag is only about 8 feet behind me ... hope this helps .. david h

1964. R Nacional Angola 1088 KHz

Yahoo group: skywavesmw
Date: 2009-08-23 19:37:06 UTC
From: hughtvdx
Topic: 1964 Message: 1964

Hi
Just posted a short sound file of reception from Radio Nacional Angola
1088KHz received at 19.00 utc tonight.

Id is at around 0:38 preceeded by some music.

Main problem is not Algeria 1KHz up but RNE 1 Spain 1098 KHz from Aljaraque near Huelva
splattering out of channel (very common with Spanish MW transmitters).

Aerial is a K9AY dual loop and an AOR 7030 using Collins IF filters.

Hugh

1966. Palstar MW-550

Yahoo group: skywavesmw
Date: 2009-08-25 20:02:54 UTC
From: jillxbrian
Topic: 1966 Message: 1966

Hello all, i wonder if anyone here is using, or have an opinion on, the Palstar MW-550 medium wave tuner.

I have been toying with the idea of buying one for years now, but have always found an alternative way to empty my wallet Hi!. I can't help thinking it's a lot of money for something restricted to such a small part of the radio spectrum. Recently it jumped from £200 to £270, though MLS (UK) are apparently doing a summer deal of £239.95. Still a lot of money i think.

Any thoughts guys?.

Best 73

hi the palstar aa30 does the exact same job and much cheaper. i have owned one for a couple of years now and for "live" dxing i wouldnt be without it. the preselector is brilliant and it even cleans up splatter on cheap receivers and the variable gain is very usefull too.
hope this helps cheers david h

Hi Dave and David, thanks for your replies.

Ok on the Lowe reciever Dave, sure it does the biz but i'm sticking to what i have at the moment due to nursing an anorexic wallet Hi!. David, i was only entertaining the Palstar MW 550 idea because i'm trying to pursuade myself to take the plunge seriously into the apparent jumble of sigs and noise down the medium wave section. I guess i'm looking for the most efficient way of seperating all those sigs on top of each other enough to makesome sense of it all. I already have the AA30 you speak of, but thought th MW 550 would be more selective. Of course, if two stations are immediately on top of each other ie AFN and a usual Spanish station on .875, then one is basically 'stitched' Hi!.

Having had a peep at other posts here, and related 'You Tube'. I can see that to take things really seriously i'm going to have to give up my beauty sleep and try the early hours of the morning. I'm talking 'The States' here, so what with the time difference an' all it looks like a change of sleeping arrangements is called for. Just aswell i'm an old bloke living alone. No 'Her indoors' to upset Hi!.

I'll dig out the AA30 and give it another go this tonight. Last evening i had this awfull hum wiping out most of the medium wave for about half an hour. I tried everything to find the source wthout success. It stopped as suddenly as it appeared, so came to the conclusion it was the guy next door using some electrical item in his shed *sigh*. What with the CB'er over the road who is obviously 'wearing big boots' to use his vernacular, who pops up throughout the spectrum from the 15 metre band through to the marine band, i have a pretty hard time keeping my enthusiasm going sometimes, i can tell you.

Anyway, i'm off the baby sit a puppy so bye for now, and thanks again.

>Hi Ton, Can you tell me what a difference, if any, that it's made to your listening pleasure on the medium wave please?.

Also proves a point, assuming you are in the states, that we have to pay nearly as much in pounds as you do in dollars due to largely being taxed so much over here. Nothing has changed much since the Sheriff of Nottingham sent Guy of Gisbourne and his heavies to rip us village serfes off in the middle ages Hi!.

Yahoo group: skywavesmw
Date: 2009-09-06 06:32:33 UTC
From: patrice.privat
Topic: 1982 Message: 1982

Hi All,

September being here, I tried MW this morning at sunrise from 0440 gmt (0640 local time) and found the dial full of Transatlantic stations (TA's). What a promising season's start !

There was action on the following channels (all in khz) :

660 ; 680 ; 690 ; 700 ; 740 ; 750 ; 790 ; 820 ; 830 ; 880 ; 890 ; 940 ; 1010 ; 1030 ; 1050 ; 1100 ; 1130
1140 ; 1390 ; 1510 ; 1520 ; 1660 and 1700 so that's 23 channels.

I concentrated on 3 channels :

*740 khz (never got anything there the past season) : mentions of "Lake Ontario", "740 Toronto AM" and a programme of 1950's oldies : can only mean CFZM-Toronto, a new catch for me.

*1050 khz all-news and adverts , mention of "Canadian Community", most likely CHUM-Toronto in its new format.

*660 khz : all sports, most likely WFAN in New York as last season.

During the 2008-09 "Fall to Spring" season, I logged 51 stations from the Americas including 3 Cubans and 1 Mexican (XERF-1570 "La Poderosa") .

Still not quite into the swing of the season yet. 0500 is the last usable hour for TA. Also, signals seem to be down on this time last year, though that could be because I am using a slightly smaller flag aerial. The height of the verticals are still the same but the distance between them is only around 20 feet.

Good DX!

9 september 2009
again some really strong signals on mw this morning but again mostly from the usual ones YAAAWWWN but a couple of good ones crept through so hopefully the propagation improves more west. the below log is just an idea to what was coming in all times in utc

830 wcrn worchester ma v strong 05.00
850 weei boston ma v strong 04.00
870 wwl new orleans fair 05.00
880 wcbs new york v strong 04.00 & 05.00
1050 wepn new york good 05.40
1310 wlob portland me strong 04.00
1320 cjmr ontario v strong 05.00
1510 kckk littleton co fair 05.06
1540 chin toronto v strong 04.30
1570 cfav laval qc strong 05.00
1580 ckdo ontario strong 05.15
1610 the carribean beacon v strong 05.20

more to come if i get around to listening to more of my recordings cheers david h ...

Add ...

1290 CFRW Winnipeg MB. Andy Kim song as per playlist. Thanks to
John Williams for the tip W 0458 09/09 JF

This was reported by John Williams of the MWC. After checking my
recording on 1290 at the time John heard CFRW I can confirm that I heard
exactly the same song at exactly the same time and probably for the same
25 second duration, all as per the CFRW playlist on their website.

By the way, it seems my logging of CJVB on 1470 is the first west coast
DX of the season. Although I did not hear an actual vocal ID, those
three time pips are very distinctive and seem to be unique to CJVB on
1470. After hearing CJVB several times last year, 'with' and 'without'
vocal IDs, I have no doubt that what I heard this morning was indeed
CJVB. Not only does the actual timing of the pips vary (they can appear
more than a minute after the top of the hour), but the timing between
the pips is not quite uniform.

Good DX!

John

1999. Conditions: 10-09-09

From: John Faulkner
Topic: 1999 Message: 1999

Not such a good morning.

The only two stations of interest were not identified. 1480 had an interesting ID I had not heard before "The South Coast?s home for news and information ? 14-80 ...? ID in difficult copy, call letters obscured. This at 0400. Also, CBS News was heard at 0500 on 1380.

1230 has had something weak for the last few mornings between 0300 - 0500. Perseus highlights the carrier nicely but the audio is never too strong. The format seems to be country music but the splatter from adjacent Absolute Radio renders the signal unlistenable most of the time.

Good DX!

Hi

Still pre-season conditions here :

*590 khz Country Music, probably VOCM Saint John's NL as last season.

*850 khz All-sports station , no ID but WEEI Massachussetts seems a sure bet.

*1520 khz Behind WWKB Buffalo, there's a Rumba/Salsa programme ; could it be La Voz in San Juan PR ?
no talk heard.

Cheers de Pat

Best U.S. bet is WAMC, Albany, NY. Another possibility is a CBC relay, via CBG Gander.

Thanks you both, John ang Greg,

You were right.

Despite heavy splatters from a 'France Info' local program on 1404, a few seconds before the TOH one can hear a weak 'CBG'. Then BBC News.

Regards,
Pat, south-east France

870 WWL New Orleans LA. This is 8-70 WWL New Orleans Ten Five Three WWL FM and wwl.com? W 0500 14/09 JF

1280 UNID. Westwood One programming W 0400 14/09 JF

Still struggling here, but it's clear that some work is needed on my makeshift flag. Hopefully I will find the time soon to construct a better one. The one I bodged together a week ago is smaller (10ft x 20ft x 10ft) than the one I used last year and the null towards Europe is noticeably less deep.

Good DX!

From: leo1949uk
Topic: 2015 Message: 2015

Bagged ESPN Radio with baseball news around 04.30am - 873kcs ... good strength with minimal fading from Chicago - didn`t think signals were that strong as I`ve never scanned AM in earnest in the AM!!! usually asleep at that time ;D

Loads of German stations, rather disproportionate really IMHO !!

Using Eton G8/PL300WT bareback!!! tried using 3ft diameter loop with no appreciable benefit so went bareback, both my 2ft and 3ft homebrew loops work extremely well during the daytime but seem to give overload when there are high signal strengths around - although, I didn`t notice any appreciable imaging on the G8 !!

Great radio for FM too with good sensitivity/ selectivity ..

Lee.

From: Chis Ridley
Topic: 2019 Message: 2019

Hi Everyone.

14th September 2009

I've been many years DXing, using a 19 inch loop antenna, I recently built a 40 inch loop, but due to its size and the fact that I do most of my DXing in the early hours in bed, with headphones on, so as not to wake my little lady, I've never actually used the 40 inch loop in earnest until after I'd got up for work this morning, when to my utter joy I pulled in a very strong, clear signal from KMOX on 1120khz from St Louis, the first "K" station I've every received.

Chris Ridley - Sligo, Ireland.

2020. Tuesday Session

From: patrice.privat
Topic: 2020 Message: 2020

Hi

1010 khz Fighting CFRB was a CBS News station, let's assume WINS New York, first timer here.

1690 khz Greek music mix CHTO Toronto for sure

1660 khz Korean language WWRU Jersey City

1620 khz BBC News // 648 khz WDHP American Virgin Isl

870 khz unid sports station

830 khz at last a clear ID from WCRN Worcester.

770 khz traces of Spanish , could be Colombia as 980 / 800 khz were dimly alive toob but almost inaudible, may be later in the season...

660 sports, most likely WFAN-NY but no ID, the game was between San Diego and Oakland I think.

Cheers from France

Pat

2023. The possibility of it being Cali

Yahoo group: skywavesmw
Date: 2009-09-16 06:01:18 UTC
From: patrice.privat
Topic: 2023 Message: 2023

Hi

Amazingly good signal this morning at 0515 gmt on 700 khz with a Spanish language news programme (no commercials while the DX window lasted, about 10 mns).
The news were read at a fast pace alternatively by a man and a woman.
WLW Cincinatti was completely wiped out at times.
I tried 850 khz (same network but weaker) but I'm not positive the voice beyond the US dominant was indeed in Spanish.

I tried 770, 800 and 980 khz but nothing sounded like Columbia.
Still I don't want to discard the possibility of it (700 khz) being Cali with 150 Kw power.

Anyone heard that too ?

Thans and have a good day

I've heard that sound here many times. When you hear a wobbler like
that, think Cuba. AM Dxers down in Florida have researched these warbles
and have determined that the origin is Cuba. The hard part is
determining exactly which station.

Hi

Strong signal in Spanish this morning, occasionally fading but coming back until 0550 gmt. No adverts, mention of Cadena Un (dim) and a talk show about the relations between Colombia and Venezuela (5.30-5.45), Colombia and Brazil, Colombia and Ecuador ; frequent mentions of "Colombia", also "narcotrafico"...so to me, this is it RCN Cali.
I'll write it down as my new distance record in MW Westward.

Cheers de Pat

1280 WNAM Neenah-Menasha WI. Ids and oldies in // web stream F 0200 20/09 JF

1510 WLAC Nashville TN. Just made out ?15-10 WLAC? in WWZN brief silence
before ID W 0500 20/09 JF

1630 KCJJ Iowa City IA. ?Broadcasting from Coralville?s (?) ... this is
Coralville 16-30 KCJJ? ID W 0500 20/09 JF

Plenty of TA signals around this morning. I had a partial ID on 1230 in
Spanish but not quite enough to go on. A nice ID was heard from WOOD
1300 at 05:00. KMOX presumed at 02:30 with talk. Fair peaks on this but
no IDs. The X band was quite lively too.

720 WGN Chicago IL. ID in BBC gap. ?WGN Radio 7-20? clearly heard F 0500 21/09 JF

1280 VSB2 Hamilton, Bermuda. ?This is BBN? ID with choir in background F 0600 21/09 JF

Conditions did not sound particularly great to begin with but stations like 720 WGN and 1160 WYLL were pushing through quite well. 1150 has a "Newstalk" ID at 04:00 (the peak reception hour for me) but it was obscured by splatter. Probably WHBY.

I also had two stations which appeared to reveal IDs. Go to:

www.skywaves.info/mw

for my recording directory. 670 sounded like WOOK (I have looped the recording) and 1470 had a Spanish ID on the hour. Times stated in the filename. Any help would be appreciated.

Good DX!

2037. Sunrise log Monday

Yahoo group: skywavesmw
Date: 2009-09-21 16:35:39 UTC
From: patrice.privat
Topic: 2037 Message: 2037

Hi

In spite of poor conditions this sunrise, 1140 khz was comfortable enough in Spanish, not much splatter from Europe.
Not sure about the station, but the very frequent use of the phrase "once cuaranta" and the mention of "puerto rico" would point to Radio Once Q in San Juan.
There were commercial adverts, so I' d be tempted to rule out Cuba.

1330 khz (first time I monitor this frequency) with French Creole.
WRCA has a show at that time called Radio Flambeau. Website says it's music and it's in Spanish.
But the name of the programme is French !
There's also (later) a French programme about Bible studies and when you click for details, they say it's in Spanish. Not a trustworthy website , and I'm almost sure that's the station I heard.
Or it could have been Radio Haiti Inter ??

Anyone familiar with that channel ??

Thanks de Pat

2040. Colombia identified (at last)

Yahoo group: skywavesmw
Date: 2009-09-22 07:49:52 UTC
From: patrice.privat
Topic: 2040 Message: 2040

Hi all,

Despite grim conditions this morning, a real strong peak on 610 khz round 0545 gmt (0745 local time here) with Spanish boleros and the frequent ID "La Carinosa".
This leaves me in no doubt that I heard RCN Bogota (station HJKL).
So Colombia is really in the bag now.

Please note there was a Rumba mix station on 690 khz but no ID.
980 khz (probably Colombia troo) still there but too dim to listen to.

Cheers de Pat

Hi all,

well, sorted out my outdoor loop yesterday its about 15 x 30 feet fed to an RPA1 amp and on to my Perseus. Logged a few stations overnight including a few new ones for me. Conditions not terribly good so even more surprising what came through.

Highlights:

0000 utc

1060 WLNO New Orleans LA, id in mix fair
1300 WOOD Grand Rapids MI, id on toth f/g
1510 WLAC Nashville TN, id in mix, fair
650 KNR Greenland, om in talk after classics - good

0100 utc

850 WFTL West Palm Beach FL, toth id

0200 utc
560 CM-- Radio Rebelde, Moa, yl in talk // 670 think this is a personal first for me.

0300 UTC

*** 1350 KCAR Clarksville TX (410 watts day 65 watts night)" The voice of Red river (then indecipherable word) - AM 1350 K C A R Clarksville" toth id weak / fair. Personal First***

see http://www.youtube.com/watch?v=h7nIFA8pBI0 for recording

0600 UTC

630 CFCO Chatham ON "Country 92.9 - 630 am C F C O" country mx and toth id fair. Personal first

820 WBAP Fort Worth TX, news, good

0630 UTC

1420 WOC DAvenport IA, " W O C talk radio 1420 - Davenport" then into news fair / good

tons of others heard at dawn like WLS WHBY KMOX WYLL etc.

good personal start to the season,

regards

Paul Logan,
Lisnaskea, N. Ireland

From: geirstokkeland
Topic: 2051 Message: 2051

My local station NRK Vigra was off 630 kHz this morning. Instead WUNO San Juan PR "NotiUno" was on top of the mix just after 0500 UTC with newstalk, ads, IDs. Vigra noted back on the air at 0800 UTC. We had storm force winds during the morning hours on the west coast of Norway, but it is unclear if this is a reason for Vigra being briefly off.

Hi

I' ve started taping my morning sessions to be able to re-play dim identifications when the signal is weakish.

On the X-band got myself 4 average quality ID's in 2 days :

*WFSM Talk Sports Radio (Georgia) 1670 khz

*WCNZ Marco Island (Florida) 1660 khz joined ID with WMYR Fort Myers (1410 khz)

*KVNS Brownsville (Texas), always with classic rocks 1700 khz

*WEUP Huntsville (Alabama) Gospel 1700 khz, competing with the above.

Cheers de Pat

2064. Surprising log from this morning / new ones from last days

Yahoo group: skywavesmw
Date: 2009-10-02 20:11:23 UTC
From: Paul Logan
Topic: 2064 Message: 2064

Hi all,

a few new ones for me overnight / this morning

560 WIND Chicago, ILL, toth id over WGAN " Intelligent talk am 560 WIND Chicago" Personal First W/F 06:00 02/10/2009
830 WEEU Reading, PA, " ABC news next here on "The Voice" - 830 AM WEEU Reading" - during pre news WCRN silence. Personal First. F 04:00 02/10/2009
990 CBW Winnipeg, MB, CBC overnight, Radio Netherlands, dominant over CBY with Radio Prague. Personal First. F/G 06:30 02/10/2009

The last one of CBW was a shock - only prarie station around except for a faint CFAM on 950 mixing with others playing operatic music. CBW was dominant for quite a bit with a Radio Netherlands address being given @ if I remember rightly 06:30:45

One other new one from yesterday:

1330 WHBL Sheboygan, WI,"Heres your news radio 1330 WHBL forecast, your station for severe weather coverage" Personal First F 06:30 01/10/2009

RX Perseus SDR / RPA1 amp ? conti loop approx 15 x 30

regards and good dx

570 CKGL Kitchener ON. "CKGL, we are located at ... online and around the world by visiting 570news.com" Difficult with some QRN but fair. Personal First! Had last year but never properly ID?d F 0600 03/10 JF

920 CFRY Portage-La-Prairie MB. "CFRY, ??? (Service?) Radio, your local information station" Country music 0553 03/10 JF

1110 WBT Charlotte NC. "Newstalk 11-10 WBT" ID on the hour but mixing with another English talker F 0600 03/10 JF

1160 KSL Salt Lake City UT. Snow and ice forecast, then ID "... for Cougar fans around the world ... KSL Newsradio 102.7 FM and 11-60 ... Utah?s exclusive home of the ... Cougars(?)" Personal First! W 0600 03/10 JF

1350 WOYK York PA. Presumed with Sporting News Flash jingle under nearby R Nightingale W 0600 03/10 JF

1510 KCKK Littleton CO. "Mile High Sports 15-10 KCKK" heard over WWZN! W/F 0600 03/10 JF

1620 WTAW College Station TX. Just heard "16-20 WTAW College Station" in the noise" W 0400 03/10 JF

Some good conditions at last but I have very little time to listen.

I managed to increase the size of the flag aerial so it covers the entire width of the garden. The nulls are greatly improved as a result, but the aerial has become less forgiving with a narrower null beamwidth.

KSL makes it into my logbook at last thanks to the good conditions around 06:00, yet 05:00 was quite poor.

Some recordings:

From: John Faulkner
Topic: 2069 Message: 2069

A very frustrating morning with several interesting, unidentified stations, all of which faded conveniently at the top of the hour or were overtaken by more regular stations at just the wrong moment.

I have two unusual IDs which I will link to below:

http://www.skywaves.info/mw/790-unid-0608-04-10-09.mp3
Country music "We give you the music that keeps you coming back. Stay with the ABB"?

http://www.skywaves.info/mw/800-unid-0600-04-10-09.mp3
"This is AM 800 KFR ... radio ... it's 2 o clock" The 2 o clock points to east coast so the K call has to be incorrect but maybe somebody knows more.

Good DX!

From: John Faulkner
Topic: 2077 Message: 2077

1060 CKMX Calgary AB. Roy Orbison "Crying" then "50 years of Classic Country, AM Ten Sixty" W/F 0238 05/10 JF

1070 YVMA R Mundial Zulia, Maracaibo. ID after lively Latin music. Not heard this since the mid 80s. Hearing it now thanks to fine tuning of the flag aerial. F 0200 05/10 JF

1070 LR1 R El Mundo, Capital Federal. 2 OMs talking as web stream W 0208 05/10 JF

1070 HCJG R Santa Fe, Bogota. Lively rhythms in parallel with their web stream W 0230 05/10 JF

1280 WNAM Neenah-Menasha WI. Oldies as web stream F 0153 05/10 JF

1290 WIRL Peoria IL. WIRL ID heard clearly. Personal First! W 0037 04/10 JF

1290 CFRW Winnipeg MB. Oldies in // with internet stream! Settling in nice and early at 01:10 !!! F 0110 05/10 JF

1580 CKDO Oshawa ON. "Hey, we got Diana Ross coming up now on 15-80 CKDO" F 0220 05/10 JF

All the action seemed to be around 01:00 - 02:30+ when I happened to be listening live, but conditions deteriorated after 03:00.

I was monitoring 1070 with particular interest after tweaking the new flag aerial. I can now access 1070 with great ease thanks to nulling local Clipstone 1071. I presume the C&W station I was hearing was CHOK. Of course I was hoping for KNX but it never happened. What I did notice however was occasional DRM hash but thankfully it was never above very weak. Who could this be?

Good DX!

Is DRM hash anything like IBOC hash? If so, WTIC 1080 throws a ton of it
on to 1070 all day and all night.
I would not doubt that this garbage could be thrown right across the
Atlantic.

That's amazing if it is WTIC hash. I wonder.

I have done some searching on the internet but cannot find anything conclusive about a European transmitter radiating DRM. I imagine the digital hash might be the same, or very similar, between DRM and IBOC but this needs confirmation.

Thanks Mike.

Yes, that's close, if not identical.

The only other possibility would be some local interference. My MW band is not as quiet these days as there are several instances of neighbour's switched mode power supplies obliterating various parts of the MW band. Frequencies affected vary as the interference travels a short distance up and down the band in waves.

WTIC is being received at equal levels with the Europeans at the moment so I cannot rule out WTIC IBOC hash. I will try and get a recording for tomorrow.

Thanks.

2086. 1070 Hash. IBOC?

Yahoo group: skywavesmw
Date: 2009-10-06 21:59:10 UTC
From: John Faulkner
Topic: 2086 Message: 2086

Here is a recording of the hash I have been receiving on 1070 recently.

http://www.skywaves.info/mw/hash-on-1070.mp3

After listening to various peaks of the hash I can confirm that WTIC seems to be peaking at the same time.

Odd thing though, The hash seems to peak at approximately 1066.5 kHz. It extends down to 1063 where it disappears under the spread from 1063. It does not appear above 1070. You will hear I have recorded USB on the second half of the recording. Is this correct for IBOC? i.e. does it become less severe when you get to centre frequency? I can't detect hash on the + side of 1080 due to strong local Talk Sport transmitters though.

Is this the first reception of IBOC hash in the UK ???

John

From: patrice.privat
Topic: 2088 Message: 2088

Hi

Still a lot of noise on the band and extremely tough conditions.

570 khz Radio Reloj CUB with telltale beeps and ID with news. A station with country music (probably from Canada) appeared briefly underneath Santa Clara.

670 khz Radio Rebelde CUB Arroyo Arenas clear with good synchro on 5025 khz SW.

1030 khz Talk station , probably WBZ Boston as last season.

1650 khz at 0600 gmt English news about Israel, frquent mentions of Jerusalem and Tel Aviv, most likely Radio Shalom CJRS Montreal.

Cheers de Pat (Beauvais, fr)

2089. Ashfield Log: 07-10-09

590 WEZE Boston MA. Just caught ID underneath VOCM. W 0600 07/10 JF

930 WPAT Paterson NJ. "WPAT is 9-30 AM, WPAT Paterson New Jersey"
Personal First! W 0600 07/10 JF

960 KMA Shenandoah IA. Mention of "Regional Radio" then weak references
to KMA. ABC news. Difficult copy. Personal First! W 0600 07/10 JF

960 UNID. "Fox News Radio". Id?d as Fox News Radio on the hour and
continued to do so for the next five minutes. No local Ids. Fair peak F
0600 07/10 JF

1150 WHBY Kimberly WI. "This is the voice of the Fox Cities, Newstalk
11-50 WHBY, Kimberly, Appleton, Fox Cities" then CBS News F 0600 07/10 JF

A brief check at the top of the hour at 06:00.

Long time no hear 590 WEZE! Tricky copy under VOCM but I will place a
recording below. I have looped the ID.

WPAT was a nice surprise on 930.

960, 970 and 980 produced some interesting stations. IDs were heard on
970 and 980 but they were too vague to be considered. 960 KMA was
difficult as you will hear from the recording. "Regional Radio" is
mentioned at the beginning of the recording, followed by two very weak
references to KMA. ABC News finally nailed this for me as I believe the
only UK-heard station on 960 which carries ABC News is KMA. These three
elements are convincing enough for me, but this was not an easy copy.

*** Who carries Fox News Radio on 960? This came up really well as can
be heard from the recording.

Finally, my recording of WHBY demonstrates the best I have heard from
this station. This is a beautiful clear ID which I have added to my
collection.

CKWX is a all news station, check for 'km' and degrees in Celsius

If it is at TOH then it might be KWKH, I saw its carrier weaker as KFAN
dominated at 0500ut this morning

WBBR has been putting in some great signals lately. Often KWKH Shrevport LA is heard mixing with its oldies format. Note their ID "Home Of The Legends".

This morning I heard a talk station coming in underneath WBBR which I suspect may be KFAN. I doubt it was CKWX as conditions weren't quite 'west coast'.

The only thing I logged this morning was this:

570 WSYR Syracuse NY. WSYR ID pulled out of the noise, CBS news jingle heard too. W 0500 09/10 JF

650 WSM Nashville TN. Another well-splattered channel. Could just make out "love from the ??? ??? of Music City ... " then sing WSM ID. F 0600 14/10 JF

670 WSCR Chicago IL. Could make out "WSCR" and ESPN Chicago" in the splatter. F 0600 14/10 JF

1020 KDKA Pittsburgh PA. "The Voice of Pittsburgh is worldwide, kdkaradio.com Newsradio Ten Twenty KDKA" G 0600 14/10 JF

1040 WHO Des Moines IA. V weak "Newsradio Ten Forty WHO" ID on the hour. I have been struggling to dig out this one. 1040 is very difficult here because of BBC Radio Sheffield on 1035 W 0300 14/10 JF

1250 WSSP Milwaukee WI. "The only station ..... on Sportsradio 12-50 WSSP Milwaukee .... " W 0400 14/10 JF

1310 *WCCW Traverse City MI*. ESPN ID then "13-10 ESPN Radio, WCCW AM Traverse City" *Personal First!* W 0600 14/10 JF

1390 *WLCM Holt MI*. "Good morning(?) ... right here on WLCM, Holt Landing(? - second city?)" *Personal First!* W 0500 14/01 JF

1590 WAKR Akron OH. "15-90 WAKR Akron, THE news authority" W/F 0600 14/10 JF

A couple of personal firsts and some less common stations made it a pleasant listen this morning.

Good DX!

830 WCCO Minneapolis MN. ?CCO, Newsradio 8-30 WCCO? heard in severe splatter. Mixing equal levels with WCRN F 0500 15/10 JF

1290 KKAR Omaha NE. ?Only on Newstalk 12-90 K-Kar, KKAR Omaha? W 0600 15/10 JF

1510 KGA Spokane WA. Very weak ?Newsradio 15-10 KGA? heard under WWZN W 0500 15/10 JF

Conditions lifted a little this morning due to a slightly higher K value. Apparently conditions further north were quite auroral.

Also noted but not logged as I had it yesterday was 1040 WHO coming in with a nice clear ID at 06:30.

Good DX!

From: John Faulkner
Topic: 2120 Message: 2120

Well, I don't believe it. I managed to hear 1590 KVGB this morning. Thanks to Ken Baird in Scotland who suggested I listen for an ID at 05:34, I checked this and caught the station slogan. The letters are a little less clear though in my recording:

http://www.skywaves.info/mw/1590-KVGB-Great-Bend-KS-0534-15-10-09.mp3

Kansas is a new state for me! So, two additions to the log:

1590 WARV Warwick RI. V weak in small pile-up. WARV letters very clear but not much else. Vw 0503 15/10 JF

1590 *KVGB Great Bend KS*. Messy ID in the noise something like "144, The Talk Of The Town ... radio ... KVGB". Thanks to Ken Baird for the tip and translation, this should be "Right here on the Dave Ramsay Show, weekday afternoons from 1 until 4 on The Talk Of The Town, 15-90 AM, KVGB". *Personal First!* Vw 0534 15/10 JF

Here is a recording of WHO I had earlier. This is particularly good as 1040 is such a difficult channel thanks to local BBC R Sheffield on 1035.

570 *WNAX Yankton SD*. Coast To Coast then lengthy ID but only caught the important part "WNAX Yankton". CBS News jingle. *Personal First!* W 0600 20/10 JF

950 CFAM Altona MB. Classical piano piece // 1250 CHSM F 0530 20/10 JF

1010 CBR Calgary AB. CBC news jingle heard under WINS/CFRB W 0600 20/10 JF

1250 CHSM Steinbach MB. Classical piano piece // 950 CFAM. "Classics till dawn" heard at 06:01:37, thanks to Paul Crankshaw for help with this one. F 0530 20/10 JF

1570 CKMW Morden-Winkler MB. CKMW call letters heard between C&W at 05:23:53. Mostly dominant over CFAV. Fair peaks F 0523 20/10 JF

Also heard this morning (but not logged since I had them all recently):

830 WCCO Minneapolis MN at 06:00
970 WDAY Fargo ND at 06:00
1060 CKMX Calgary AB at 06:00
1140 CHRB High River AB at 06:00 (tentative)
1160 KSL
1290 CFRW
1470 CJVB 07:00

For those who want to check, I heard something very interesting on 1400 at 06:00 this morning. It was a crooning programme and was briefly dominant over CBG at 06:00. I presume this was not WOND since they carry the Newstalk format. An OM gave out what I assume was a full ID but it was too difficult to hear in the noise/splatter, but 'Milwaukee' was noted.

Maybe somebody else will have more luck.

Good DX!

OK, I'm impressed.

I checked the FCC records and they are 10KW day/500W night. Radiation pattern is directed to the south and west of the Los Angeles basin (out over the Pacific Ocean) which makes sense as there are high mountains to the north and east.

I hear them no problem as I live one city over (Redondo Beach, Los Angeles County, CA, USA).

73,

From: patrice.privat
Topic: 2130 Message: 2130

Hi

It is very odd to pick up personal firsts under these very poor conditions but it happens.
No complaints.

950 khz Again classical music on a period extending well over an hour this sunrise, with short peaks of 1-2 minutes then silences lasting up to ten minutes then a peak again.
I believe it is CFAM Altona (MB) though, again , the TOH ID eluded me.
I know my distinguished colleagues identified it this week.
Besides I have proof that Manitoba is audible this week (see below)

920 khz Country and Western station with slightly longer peaks than the above.
Finally rewarded with a TOH ID "CFRY", so Portage La Prairie, Manitoba is in the log (I taped the ID, it's weakish but well distinct with headphones on).

850 khz unid Sports station above the DRM QRM (Italy ?), no ID heard.
At one point I hear ABC.

Cheers de Pat

Topic: 2133 Message: 2133

A disturbance earlier in the morning spoiled reception here, though there were still some strong east coast signals around. Also 820 WBAP was quite good at 05:00. The regular Cubans were about the strongest I have heard them.

The only thing really worth mentioning is the unusually late fadeout, with more commonly heard stations like 1130 WBBR and 1140 CBI coming through beyond 09:05 GMT with fair signals.

Good DX!

Date: 2009-10-25 14:43:21 UTC
From: fast_logger
Topic: 2135 Message: 2135

Hi

Another bleak sunrise session.
3 noteworthy Spanish channels sticking out on 610, 770 and 980 khz.
All I know is they were not Rebelde (checked 670 and 5025 to be sure).
I strongly suspect Colombia again.
770 khz in Spanish is a first timer here (but can't guarantee it was HJJX Bogota).

Cheers and good DX

Pat

From: kiddisjr
Topic: 2148 Message: 2148

Around (southern) california I notice unfamiliar medium wave transmitter sites.

As I drive past these sites I need to keep both hands on the steering wheel and not on my radio tuning knob searching for "that overly strong signal".

Is there a MAP in a book or website that shows accurate and current map listings and/or locations of medium wave sites?

Im not interested in script or text listings. Need a MAP showing pinpoint locations.

Thanks in advance, Rick

Hi Rick

As Gunter has suggested, Google maps will be a good choice, a number of sites that I have checked out also give a street view too. Inputting the call sign can usually bring up the transmitter site; you may also find this of interest: http://www.voacap.com/europe.html

Paul

From: John Faulkner
Topic: 2151 Message: 2151

800 CKLW Windsor ON. Take us home(?), take us (to work?), take us wherever you go. This is AM 8 Hundred CKLW" ID. Fair signal but well-splattered Fair 0700 05/10 JF

820 CHAM Hamilton ON. "Newstalk when you want it. Hamilton?s only talk station, Talk 8-20, talk820.com" then Canadian press news Fair 0600 05/10 JF

1310 WCCW Traverse City MI. "13-10 ESPN Radio, WCCW Traverse City" ID on the hour Fair 0700 05/11 JF

Conditions not so good for the last week or more but things gradually recovering.

One thing I have noticed is the now nightly reception of WCCW on 1310 with its ESPN sports. Hard to believe this used to be a rarity not so long ago.

Good DX

Hello Mike.

My old MW loop used to be 40 inches square. There were seven turns with the inductive turn being placed over the middle turn. So I think your dimensions/turns are wrong, assuming you are using the correct tuning capacitor. Try adding or subtracting turns, one at a time as this will vary the coverage.

Cheers

John

From: patrice.privat
Topic: 2155 Message: 2155

Hi

Sunrise Thursday yielded the following :

*1040 khz ID from WHO Des Moines, Iowa.

*1010 khz "ten ten WINS" with New York City midtown weather, "W I N S Radio" (NY)

*790 khz ESPN Radio (probably WAXY Miami but not guaranteed)

*890 khz "W L S " (Chicago) , long suspected & finally nailed.

*850 khz Always that sports station over the DRM nonsense. (WEEI ?)

Cheers de Pat (Beauvais, fr)

2156. MW loop turns now sorted

Yahoo group: skywavesmw

From: Michael in Suffolk
Topic: 2156 Message: 2156

Hi John and all. Well it turned out to be the tuning cap in the end, my 24 x 24 inch loop a spiril is now missing one LOL this always tuned will beyond 1.620 and 531 khz it now on the 48 x 48 inch loop with 10 turns there is about a 1/4 inch open and closed vane wise each end.

I have 2 tuning caps two are non slow motion ONE is 2 x 16 vanes that would be great if I had a slow mo attachment, seeing as I do not it is up for grabs if anyone wants it, OPEN TO OFFERS. Mike in Bungay Suffolk.

2157. Its a sprial type.

From: Mike
Topic: 2147 Message: 2157

Hi Jurgen Thank You for the link, I have made X loops in the past from a Radio Nederland Page, but when SW Magazine showed "The Living Room Loop" many years ago I made one of those as well it was a round bit a very large tubing, a few years later I saw a Sprial loop that was 600 x 600 mm {24 x 24 inches} and liked it right away, someone also made me a DMA with variable gain which was fixed in line with it this loop was great not to small not too big, but I was thinking what if I could get more gain without the DMA and so I was thinking twice as size. The 24 x 24 had I think a gain of 9-11 dB with the DMA on. THe 48 x 48 inch loop made like a 2 x H crossed in the middle {as per the 24 x 24} has I think and gain of about 18-20 dB with no DMA required. I have 7 variable tuning caps here even some flat brown vintage types, but only one of the metal vane types truned the whole MW band, I made all type of combonations- more turns - less turns but only one gave full coverage, On a site I found it said 48 x 48 put on 9 turns but I think this must have been for a X loop, it turned out that 10 turns were required for a 8 sideded sprial loop, all in all I am happy with it, it now turns to 1.610 my anologe portable cannot get to the Dutch pirates so will wait for my Degen DE 1103 to be returned its have a filter mode for thew VHF band. I seem to have a bit of a gap on the tuning cap each end so I presum that the tuning should be about 470-1.750 or more we shall see. Mike 1xdxer.

Mike,
Thanks for an interesting posting on the loop antenna.
I have often pondered on the comparison between the traditional square loop
and the spiral or ' lozenge ' as the French call it.
The spiral is much easier to construct but of course you don't have two edges parallel
like the box.
Try entering ' Vintage Loop Antennas ' in Google, you get some real pieces of furniture,
perhaps all that french polish smoothes the signal path hi!
I picked up some ex MOD tuning capacitors , 3 stages x 500pf with remote (Bowden cable)
slow motion tuning i.e. 50 turns to travel the 180 degrees.
Regards,
72, Brian, G0NSL-QRP.

Rick, if you have Google Earth you can download a kmz file that will overlay TV, FM and AM transmitter locations on Google earth maps. These come from Cavell, Mertz and Associates. Do a search for Cavell, Mertz and hunt around and you should be able to find them. I have them for all three. You should be able to download AM, FM or TV by itself, if you don't want all three types.

570 CKGL Kitchener ON. "CKGL, we're located at ...?... and at 570news.com" Weak 0700 06/11 JF

680 CJOB Winnipeg MB. "... The Superstation, CJOB" slightly behind CFTR Fair 0700 06/11 JF

740 *CBX Edmonton AB*. Since CBC R1 have changed their news jingle it can be heard quite clearly, even when it is weak or buried in a pile-up. News jingle clearly heard at 05:00, 07:00 & very clearly at 09:00. *Personal First!* Fair 0500 06/11 JF

770 *CHQR Calgary AB*. "For breaking news, we're at 770CHQR.com". Fair levels and over WABC! *Personal First!* Fair 0500 06/11 JF

920 KDHL Faribault MN. "This is Radio America" ID Weak 0700 06/11 JF

920 CFRY Portage La Prairie MB. "CFRY is Community Service Aided, your local information station" and fanfare then news Good 0500 06/11 JF

940 CINW Montreal QC. "AM 9-40, Montreal's Greatest Hits" nicely above the local Gold 945 splatter for a change Good 0700 06/11 JF

980 *WCUB Two Rivers WI*. "WCUB" ID sounded clear enough at 0558 but KB confirmed the music I was hearing was indeed that of WCUB. Fair on peaks. *Personal first!* Fair 0658 06/11 JF

1000 WMVP Chicago IL. "WMVP AM, ESPN Radio" ID heard just past the toh. Fair 0700 06/11 JF

1010 CBR Calgary AB. Again, able to make out the new 'higher pitched' CBC toh jingle. Weak 0700 06/11 JF

1060 CKMX Calgary AB. Several "Classic Country AM 10-60" Ids, plus "Every weekday from noon to 1 Classic Country AM 10-60 presents the All Request Lunch ..." Fair 0655 06/11 JF

1130 KFAN Minneapolis MN. Almost equal levels WBBR with sports news and clear KFAN call Fair 0700 06/11 JF

1250 WEAE Pittsburgh PA. Very weak. Quite a struggle to hear but "WEAE Pittsburgh" noted in the mix Weak 0500 06/11 JF

1290 CFRW Winnipeg MB. "You're listening to CFRW, a CHUM radio station" and oldies Fair 0700 06/11 JF

1390 WRIG Schofield WI. "This is WRIG Schofield Wausau, a service of Midwest Communications" in the clear Fair 0700 06/11 JF

1470 CJVB Vancouver BC. Time pips at 25 seconds after the hour and usual English ID Weak 0700 06/11 JF

1510 KCKK Littleton CO. Difficult at 07:00 with Sporting News Flash jingle, mentioning Littleton Weak 0700 06/11 JF

1630 KRND Fox Farm WY. "La Grande 16-30" Ids and ranchero music Weak 0600 06/11 JF

1660 KQWB West fargo-Moorhead ND. "... weekdays until 5pm right here on KQWB AM West Fargo, Fargo, Moorhead 16-60 ESPN" Fair 0600 06/11 JF

1700 XETE Tacate, Baja California. "... and on the net on 'your town'? San Diego 17 Hundred" Weak 0600 06/11 JF

Good DX!

From: fast_logger
Topic: 2163 Message: 2163

Dear Friends

If you care for low quality pitiable recordings, here's my catch of Brazil last night on 740 khz.
The thing is 747 splattered a lot with loud nonstop music and if you face Bahia, you ve got Holland on your back (I use the Icom original filters)

http://www.box.net/shared/uuicdpm8pn

Bom Dia

2164. Getting to 1.710 khz

Yahoo group: skywavesmw
Date: 2009-11-07 09:11:30 UTC
From: Mike
Topic: 2164 Message: 2164

Hi Brian - John - All.
I still seem to have a problem getting to 1.710 khz MW {BC}.
Brian I had a look at Vintage MW loops very nice pics but of little use, mind you the sprials were like bits of furniture in the 1920s.
I found out that 40pF will tune around 1.600khz as I had a 150pF variable that I used once for a hula hoop with SLINKY turns around same re Ham Band loop as per guy in PW I used that last night,interesting if nuffthing else it tuned as I said around 1.602-1.647 khz.
365pF will get to the 540khz end of the band and so 0-365 will cover the whole band, depending on loop size eg 24 x 24 inchs no problem, and a loop I altready have and may have to go back to as this 48 x 48 loop is givening me hell.
In the loft I am sure I have a few flat bakerlite brown tuning caps that are marked 0.500 so I am going to try one of those, I am sure its not the windings or the spacing as that should be ok, the spacing is quoted as 0.875 and the turns for a 48 x 48 inch loop being 9 I should think no matter as to shape re 9 turns, I will report my findings later, any help-comments very welcome. Mike.

950 CFAM Altona MB. Classical music // 1250 Weak 0700
07/11 JF

960 *CFAC Calgary AB*. ESPN Radio Calgary. Call letters obscured
by splatter but ESPN Radio Calgary heard. Peaked to fair levels after
this. *Personal First!* Fair 0800 07/11 JF

1250 CHSM Steinbach MB. Classical music // 950 Fair 0700
07/11 JF

1230 UNID CBC Radio One news jingle on the hour. Presume CFGN but
others on channel. Weak 0500 07/11 JF

Also heard: 740 CBX, 1010 CBR, 1060 CKMX, 1290 CFRW, 1470 CJVB, 1510
KCKK, 1630 KRND

Conditions not as good as yesterday.

I wondered if anybody else is plagued as much as I am by that awful
splattery RNE news jingle. The recording below demonstrates just how
severe this can be. The recording is of CBN on 640.

http://www.skywaves.info/mw/that-damn-spanish-news-jingle.mp3

It is quite amazing to see this in Perseus where large chunks of the MW
band show a sudden surge in signal strength. If I could easily video
this happening you would see what I mean.

Good DX!

Nice job on the photos! I have never done a spiral loop, only box loops. And now that I have the flags outside I won't need them. The loops pick up too much noise from ATT Uverse to be useful anymore, and the flags are very quiet.

Oh well, BBC-WS isn't any better, it totally obliterates CBN with its TOH noise
Then there's BBC-Stoke on 1503 with its wide bw reaching til 1509 and ruining
1510, that used to be much clearer. I wished Ofcom would issue stiff fines as
the German authorities do, BW is supposed to be 9kHz not 12kHz

Hi Mike B. Many thanks for the comments thats from "She Who Must Be obayed" and myself, after I put up the variable tuning capacitors I had a look around ebay, wow the asking price was OTT {over the top} someone wanted £45 and the lowest was £18.00 my prices will be much lower to club members as I just need to make up the funds to get one 500pF slow reaction drive type. As you can see the 24 x 24 inch loop looks very small up against the 48 x 48. Mike B Evans.

hi Jurgen
info from Ofcom site

http://www.ofcom.org.uk/radio/ifi/rbl/engineering/eng_code/

3.2 Spectral Occupancy

Sidebands must not exceed a level with respect to the steady state
carrier, of:

* 20dB for sideband components more than ? 7.5 kHz from nominal
carrier frequency.
* 40dB for sideband components more than ? 9 kHz from nominal
carrier frequency.

These limitations are to be achieved by the use of audio low-pass filters.

Are the German Authorities any different?

2175. HJCA logged !

Yahoo group: skywavesmw
Date: 2009-11-08 08:37:50 UTC
From: patrice.privat
Topic: 2175 Message: 2175

Hi

*740 khz Brazil was real strong, again with "Futebol" at 2200z last night (will post new soundclip tonight, Have to go shortly).

*1250 khz Latin station identified 3 times as Capital Radio so HJCA Bogota, excellent level for 10 minutes
(recording of the ID will be posted tonight)

*1400 khz really powerful station in Spanish 0705z, taped the ID but can't make nothing out of it (will post it tonight).
I hear "Son las dos y cinco minutos", the station has various ID's, one sounding like Radio Lacay.
I played the tape 20 times but no mention of Emisora Mariana (I saw that John heard it several times on 1400).
It is not Mexican cause they mention a "Provincia" not an "Estado".

I'm really lost on this one. Will put it on box.net later today.

Cheers de Pat

2176. Re: Spectral Occupancy

Yahoo group: skywavesmw

From: Julian Hardstone
Topic: 2176 Message: 2176

Thanks for the details Dave. If you think about it there would be no logical sense in limiting MW
audio bandwidth to 4.5kHz, even if it would be nice for TA Dx ;-)
Domestic receivers do not have brick-wall 9kHz filters. Successful spectrum management requires that
the adjacent channels have weaker signals than the local signal, whatever the audio bandwidth

2177. Logs on new 48 x 48" loop

Yahoo group: skywavesmw
Date: 2009-11-08 09:35:59 UTC
From: Mike
Topic: 2177 Message: 2177

Hi All. Well was up till 02.45 last nighht here is what I received, radio was trhe Realistic DX 392 not the best to use.
BST FREQ STN DETAILS
01.00 1.368 Manx Radio Coming in very well.
01.07 1.440 ARS Strong
01.09 1.520 ARS not as above Strong
01.25 1.700 unknown, but heard record "Treat Your Children Well" WEAK.
latter adverts.
01.47 1.010 unknown-Advert re Shopping Maul-moderate.
02.13 1.310 unknown Heard US accent-very weak.
02.17 1.390 unknown US accent - very weak.
02.25 1.500 SPORTS channel- very weak and closed in grung noise.
02.30 1.510 Phone in. - very weak
02.32 1.656 Dutch Pirate - Moderate - Player "Runaway" Eng/Dutch.
02.36 1.665 Numbers Station in SSB call to 425 411 Area Broken English.
02.39 1.680 SSB lang sounded Lap Land! Loop pointing towards Denmark!
02.44 1.740 SSB- lang French.... Off To Bed.

Well the 48 x 48 loop seems to be tuning well, sorry no positive ids
but I am sure someone knows these channels and can do a id.
The Rx was in narrow band during this test and as I said not the best rx lots of splatter, the 1.700 had been in a bit before 01.25 but hearing that record and even weaker US accent made me stay up for more, Iam sure I can do better. Mike in Suffolk UK.

Hi Dave,

> Are the German Authorities any different?

I have not searched for the details, but for FM I once asked a NDR engineer why Germany does not use wider spectrum as UK, Holland etc.
He replied that Germany follows the Geneva convention agreed values and will issue hefty fines if they are exceeded. Other countries apparently don't see it as strict. He could not tell me the standard itself.
I assume something similar exists for MW, so it would be interesting what the Geneva papers actually say, since they are an international agreement.

It would be great if we can get pressure put on the UK authorities to
force a narrower bandwidth on stations. What would be the chances? :-)

2180. Ashfield Log: 08-11-09

Yahoo group: skywavesmw
Date: 2009-11-08 14:26:59 UTC
From: John Faulkner
Topic: 2180 Message: 2180

540 Unidentified news station. Could only make out "All News" in the ID then Fox news jingle. Weak 0600 08/11 JF

540 *XEWA W Radio, San Luis Potosi*. Nice ID by YL heard in the mix. *Personal First!* Weak 0600 08/11 JF

750 WSB Atlanta GA. Toh ID mentioning "Atlanta news and weather. And Georgia Bulldog's station". Call letters obscured but clearly WSB Fair 0600 08/11 JF

900 XEW W Radio, Mexico City. Italy gone thanks to the flag, Spain faded thanks to daylight -- alone on channel! "W Radio, 900 AM, Mexico" Personal first! Weak 0900 08/11 JF

980 WCUB Two Rivers WI. "... and now more of the new and old, your kind of country, with ??? on AM 9-80 WCUB" ID. Weak 0901 08/11 JF

_*Notes:
*_
The WCUB 980 logging replaces my previous one as I now have a full ID recorded.

The two Mexicans were a nice surprise, particularly 540 XEWA.

Interesting to hear KKCK on 1510 with such regularity. It has been present every morning recently and has usually been dominant over WWZN.

North American DX was audible beyond 10:00 this morning which is a promising sign. Many Europeans have long since faded, which is allowing better access to lots of frequencies such as 1270 and 980. 980 had a jumble of stations at 07:00 but nothing dominated, until WCUB took over a minute later. WCUB recording here:

http://www.skywaves.info/mw/980-WCUB-Two-Rivers-WI-0900-08-11-09.mp3

Good DX!

Hi

I played my 1400 khz UNID soundclip until my ears got sore and I finally discovered it was indeed Emisora Mariana Bogota.
The guy says it fast and weakly at second 49'.
I think he also gives the callsign HJKM at some point.
Check it out at :

http://www.box.net/shared/7ymq61flsj

I have also uploaded Radio Capital Bogota's ID on 1250 khz :

http://www.box.net/shared/o19f1u0t6d

And yesterday's (far better than friday's) catch of Brazil on 740.

http://www.box.net/shared/vphk96g6pm

I hope that these 3 links work fine for you guys.

Cheers

540 is most likely WFLF, near Orlando, Florida; although they ID as "WFLA", apeing the successful, co-owned 970 outlet down the road in Tampa-St.Petersburg.

2188. Re: [skywavesmw] Ashfield Log: 07-11-09

Yahoo group: skywavesmw
Date: 2009-11-09 06:41:05 UTC
From: Andrew Tett
Topic: 2166 Message: 2188

Hallo everyone...

I'm afraid that I will express an unpopular viewpoint here:

Britain sits somewhere between the extremes of broadcast bandwidth that exist in Europe. Germany, France and (it seems) the Northern European countries seems to stick to the theoretical 4.5kHz audio bandwidth limit, Britain has moved from 5.5kHz in the Seventies to nearer 7 nowdays and countries like Spain (and probably most of the rest of the World) seem to be oblivious.

I have always envied the US, personally, where AM broadcasting is allowed to employ nice wide bandwidths, and AM stations can sound almost as good as FM ones! I have never understood the argument that we should limit AM bandwidths in Europe, and as there are plenty of European stations that evidently do not bother, and no-one has ever complained about interference to normal broadcast stations I still feel that it is an unnecessary restriction to sound quality in the AM bands.

In my opnion, most of the interference that I have found obliterating DX stations is from the high levels of audio processing, which peak up and increase the audio levels at around 5kHz to make the limited bandwidth sound "nicer". It causes splatter, which I really object to.

Our hobby that operates on the extremes of performance of the broadcast medium but we seem to sometimes forget who and what the medium is actually for - people comfortabley listening to local stations at reasonable strength.

That should put the cat among the pidgeons...

2189. Thank You Paul Re: Logs on new 48 x 48" loop

Yahoo group: skywavesmw
Date: 2009-11-09 07:25:01 UTC
From: Mike
Topic: 2177 Message: 2189

Thank You Paul. I think I have seen your YOU TUBE loop demo is that you with the X frame and red tuning knob plus radio in the corner of loop! My loop as you may have read is a 48 x 48 sprial I have just found out that on a double tuning gang one section will tune down to 2.200 khz and both together will tune the 522 khz end useing my 24 x 24 inch loop so must make up a switch, not sure how to do that but I will try, also a arangment for the 48 x 48 I think now! I now think the 48 x 48 should have 6/7 turns not 9 but I will see.
I marked off all my tuning caps yesterday retesting them on the 24 x 24 inch loop and colour coded them so will be putting up a list re vien plate number count and tuning range, not very good at working out pF, which might be usefull to someone.
Once again many thanks for the info regarding my logs, how about that SSB stuff any ideas as to what all that is about, and a numbers station down that end!
BTW is there a US-Canada list.
One other thing was going to join MW Circle but seeing there on line mag feel its not for me, maybe the DSWCI might be better, or will take your advice. Mike in Bungay Suffolk

Hi Mike,

There was a station in Italy using AM stereo a few years back.
As for AM Stereo radio's, I've seen them on Ebay & a small low power transmitter for sale on a regular basis from a seller in Greece!

2198. 1390.22

Yahoo group: skywavesmw
Date: 2009-11-10 03:05:12 UTC
From: John Faulkner
Topic: 2198 Message: 2198

Currently receiving a low het when listening to WEGP 1390 in USB.

Perseus shows the offending carrier to be at 1390.220, but there is a weaker carrier present too at 1390.124.

Offsets are approximate. Maybe somebody knows who these are. 1390.22 is just at audio levels. Perhaps something worth trying for.

Good DX!

John

2199. Re: [skywavesmw] AM MW BC stereo

Yahoo group: skywavesmw

From: Andrew Tett
Topic: 2166 Message: 2199

Thanks for your input, Mike...

I do not believe that AM stereo takes up a significantly greater amount of bandwidth than normal AM due to the way that it works. I have got an AM stereo receiver, which relatives shipped across for me a few years back and have used it to resolve the France Bleu transmissions on 864kHz which are reasonably listenable where I live on the South Coast. However, as you say (and it is the ONLY experience that I have of AM stereo) it is not that easy to get it exactly on tune, and with the limited bandwidth that Radio France are using, it is only interesting for its "amusement value."

I am quite happy with a nicely set-up, wide-ish bandwidth mono AM sound. If I want stereo I have FM or DAB (or even my iPod).

The thing that I do object to on AM, apart from the dreadful audio processing that is often used these days, is the preponderence of spanish stations - there are SO many on almost every channel, and Spain can not be THAT populous. Why can't they use the same channel over and over again like we do here (i.e. 693kHz / 909kHz)?

Andrew

We used to call them " Frame Aerials "

If anyone is cosidering building such a device then there are a few points to bear in mind.

1 For a given "size", a square is better than a triangle, an octagon is better than a square and a circle is the best you can do.

2 A short " Helix " is better than a flat " Spiral " because all the turns encompass the whole area.

3 The maximum length of wire used must not excede 0.1 of the wavelength at the maximum frequency that you want to use. Something like 0.09 or 0.085 is better. This means that for a f/max of 1.3 MHz, around 5 turns on a 1 Mtr frame.

4 Turns should be slightly spaced apart to keep the distributed capacitance low.

I hope I am not telling something that everyone knows already !!

Lately I have been Dxing Navtex staions on 518 KHz and I'm currently
working on a design for a tuned ferrite rod antenna.

Hope this helps

Bob

Conditions have been uninspiring for the last few days though I know those north of that mysterious DX border have been receiving west coast regularly.

Just the one surprise here this morning: 1140 had religion after 10:00 and was audible with fair levels up to 10:40. Audio continued until 11:04 when my recording stopped. Programming was religious so I presume this was CHRB in Alberta. Certainly no CBC jingles were heard on the hour at 10:00 and 11:00, but neither were any other IDs, sadly.

Good DX!

From: John Faulkner
Topic: 2206 Message: 2209

Hello Jurgen.

For many years, it has been taken as read that UK DXers living 'north of the border' (the geographical border between England and Scotland) have better higher latitude DX.

It is perhaps ridiculous to assume that this geographical border will have an effect on DX but that is how things have always been. This has been highlighted again and again over the years when you look at the DX loggings of well-known English DXer Barry Davis, who lives only six miles from the sea and virtually right on that border, and the three DXers in the SW of Scotland (just a few miles from Barry) David Hamilton, Ken Baird and Paul Crankshaw. They consistently hear exptic west coast DX at good levels when Barry doesn't.

When the conditions improve such that west coast is being heard south of the border, David, Ken and Paul continue to hear other exotic DX which doesn't penetrate the border.

I know the theory should state that they all receive the same DX, more or less, but the practice never backs that up.

You are lucky living on the north coast of Germany Jurgen. The DX equivalent in the UK would be the north coast of Scotland, Wales or Northern Ireland, only you are a little further south of course and on a par with my own latitude, though I am in the middle of the landmass and therefore not best placed.

I know I have received some superb DX catches recently, but they are run-of-the-mill when compared with the exotic DXpedition quality loggings made in SW Scotland at the same time.

Yes that would make sense for the last few days, very unusual, and now getting 780 and 820 better from Alaska than the usual 680

> Perseus, I assume?

No Winradio. Its SAM delivers much cleaner audio than Perseus. In this case USB/LSB was bad due to the strong splatter, and since the adjacent carries were further away I could use SAM. Perseus SAM sounds very noisy, and the carrier unlocks way to often
I also use ISB quite a bit lately, because the "stereo" effect simplifies differentiation of the audio of the many stations on one channel.

For live DX I went back to Winradio because I can *simultanously* see the carrier spectrum in high resolution so that identification is a *lot* easier. That is the most missed option with Perseus recordings but chances to ever get that function are very small

For the ones who could not get it:
This is CKWX yesterday at 1000ut, 3 min long because it sounded nice

No Mark, no locals here. Once daylight all splatter goes away. Only the UK
remains on other frequencies, as well as Holland and Norway.
In the 70-80's we had AFN Bremerhaven on 1143 with 5kW

From: patrice.privat
Topic: 2216 Message: 2216

Hi

1470 khz Chinese or Vietnamese talk at 0710 gmt. As WAZN (3.4 kw MA) does not seem to have been logged by the group these last few years, I'd be tempted to assume it is CJVB Vancouver (50 kw).
Their website says Chinese programme at 11pm local time ..

1250 khz brief spell of classical music (piano) at 0805 gmt ; according to the group's recent logs, that would point to CHSM Steinbach, Manitoba.

Hoping that some of you heard that too

There is an English ID at the top of the hour but also they carry three very distinctive time pips. The time pips and the ID are not always right at the top of the hour though. I have heard the time pips as much as 90 seconds past the hour. Those pips really penetrate the noise and, if you listen carefully, the gap between pips two and three is slightly shorter than it is between pips one and two.

CJVB was coming in well at 08:00 this morning. I'm just about to check my overnight Perseus recording now so fingers crossed!

Well done!

Stunning!

From the noisy, crackly, well-splattered wastelands of the English Midlands, this is what CJVB sounded like here:

http://www.skywaves.info/mw/cjvb-0700.mp3

But it was much better at 08:00:

http://www.skywaves.info/mw/cjvb-0800.mp3

Don't be fooled by the splatter and noise - the signal was up to fair levels.

John

From: John Faulkner
Topic: 2221 Message: 2221

Hardly exotic DX, but this is one of the strongest signals I have heard from North America this season. It's WWKB in Buffalo NY, made at 07:00 this morning. I used 12kHz AM in Perseus. I also used the Perseus notch filter to remove the annoying 1kHz heterodyne generated against 1521.

http://www.skywaves.info/mw/1520-WWKB-Buffalo-NY-0700-14-11-09.mp3

Good DX!

2224. CJVB-1470

Yahoo group: skywavesmw
Date: 2009-11-14 15:36:46 UTC
From: patrice.privat
Topic: 2224 Message: 2224

Hiya

Just got the coordinates of CJVB from the FCC website (N49/11/36 W123/01/17) and it is 7,864 km from me to the West and 9 time zones away.
Of course it does not beat my record QRB (Colombia to the West, Taiwan to the East) but still, being on the Pacific coast is like a landmark, gives me a feeling of longitudinal achievement.
And the season is not fully ripe yet !!
I was fortunate to visit Vancouver in '92. Now the city is even dearer to me with this reception.

Cheers and many thanks to Juergen and John for their continuous support.
I'm now on the look out for Korean on 1650 and Mariachis on 1700.

Cheers de Pat

Subject: [skywavesmw] Have I hit the West Coast at last ?

Hi

1470 khz Chinese or Vietnamese talk at 0710 gmt. As WAZN (3.4 kw MA) does not seem to have been logged by the group these last few years, I'd be tempted to assume it is CJVB Vancouver (50 kw).
Their website says Chinese programme at 11pm local time ..

1250 khz brief spell of classical music (piano) at 0805 gmt ; according to the group's recent logs, that would point to CHSM Steinbach, Manitoba.

Hoping that some of you heard that too

Pat (Beauvais)

2233. How good are we as MW DXers ?

Yahoo group: skywavesmw
Date: 2009-11-15 21:00:19 UTC
From: patrice.privat
Topic: 2233 Message: 2233

Hi

Partly to motivate myself and also to assign me new goals in this hobby, I have drawn for myself an assessment chart to see where I stand as a TA DXer.
I selected several criteria with the aim of placing myself in a realistic position, slightly below average.
Of course the gear employed is not a criterium, only what has been logged or QSL'd as long as it's bona fide MW reception via a radio receiver. Everone uses the receiver and antenna they can grab their hands on.
With this chart, I stand at 18/40 (40 being the top notch).
My goal being to reach 26 before the end of the current season.
Here's how it goes (you can play with it, alter it or...ignore it).
If some of you organize combined listening events (DX camp, weekend sessions.) this could be a tool too.

For those who do not like QSL'ing you can replace the last 4 items with " off-season" reception such as "received Eastern Time Zone in June/July =2" etc..

Cheers de Pat

Canadian Maritime Provinces and Newfoundland
2

Eastern Time Zone CAN/USA

Interesting thread. What IS good dx. What IS an achievement. Pat your idea of setting personal targets is something I do myself.

In a way it seems that Dxing has a got a little easier with the advent of more directional antennas. Remember when indoor bi-directional loops were the norm and outdoor aerials were usually a bit of wire thrown up as high as possible. The EWEs, flags and pennants have really changed everything (and arent they marvellous!)

I might be a bit of a masochist but I actually get a big thrill out of ultralighting and its proving to be one of the most difficult targets I've set myself in this hobby. My goal is to log 500 stations on an ultralight with only internal ferrite rod antenna. I am at 461 and slowly heading toward 500.

On the morning of November 7th I logged Alberta on 1060 and 1140 on an antenna the size of my thumb, and to be honest, if I think about it, thats probably some of the best stuff Im ever likely to receive on medium wave.

So hats off to those who dont have huge antenna arrays.

As David and Pats great logs show, sometimes you just dont need them.

As an aside, the new tecsun radios the PL310 and PL380 have selectable bandwidths of 6 4 3 2 and 1 khz and while they arent perfect, for under £30 you can have a hell of a lot of fun with them.Not quite Perseus and antenna farm but the thrill is the same.

regards

Paul

From: Julian Hardstone
Topic: 1761 Message: 2237

Some members enjoy chatting about radio in general, and chatting about off-topic subjects with
fellow enthusiasts. Others would prefer that the Skywaves groups are kept strictly on-topic, and
would like the majority of posts to be about reception reports and technical news

To accommodtae both views, Michael and I have set up Skywaves Chat Group and I would encourage all
members to take a look and maybe join in the chat. Please continue to post all your hard-core dx
news here, but if you want to join in with chatty and OT posts, you might like to visit the new
group:
http://uk.groups.yahoo.com/group/skywaveschat/

You can just look in there to see what's going on, or you can subscribe to receive all posts by
email. Recent discussions have included tuning capacitors and MW loop antennas, dxers' neighbours,
FM deviation levels, attenuators and i-Trips. Posting is unmoderated except for 'first posts' to
keep out the spam

Hope to see you there
- Julian

From: Paul Logan
Topic: 2240 Message: 2240

Hi all,

one surprise this afternoon, Have seen this logged by Christoph Mayer but very difficult here because of France.

1205.975 Yianbian RGD, Yanji, Jilin, China, om in Korean talk brief peak over France. Good 16:00 16/11/2009

Throwing caution to the wind I pointed my outdoor loop, now 10 x 20 feet, right at the neighbours house / RFI (and the far east) and the effort was worthwhile.

NHK2 was also very weak with their music box sign off at 1602 on 828 and 1593.

Im also trying to nail the Korean KBS station on 1467, I can hear their time pips regularly but recovering audio is a different thing. TWR Kyrgyzstan, Iran and Monaco are usually mixing here in the afternoons.

Hi Paul and Brian.

Thanks for your messages

1/ As to ESPN on 790 khz, I have always postponed writing WAXY in my logbook because the real ID eludes me, apart from the frequent ESPN mention.
But truely Topazdesigns does not show any other likely ESPN culprit on that channel so I've decided to make it my TA station #81 at last (still a beginner here).
Funny I did not get any other Floridans this morning though.

2 / Well talking about hard drives versus ultralight DX gear, I have no soundcard anymore and my system is highly unstable and well beyond repair so as I'm presently too broke to buy even the cheapest computer
(pass on the plate please) I have given up parts of the hobby I relished (such as Navtex, DGPS)...

I tape my sunrise sessions with a vintage taperecorder that probably looked already old fashioned when Mott the Hoople was in the British charts...Sometimes it makes it easier to ID a station to play again and again those 2 or 3 un-nerving seconds when you wish you had a real good filter, or Spain was tectonically exiled between Tasmania and the Pole.

Cheers ;-)

WAXY's ID is tough to hear because it sounds weaker than the following ESPN intro. Pay attention to "Miami" that is the first to understand word in the splatter.
This clip was made on one of the better days

Topic: 2247 Message: 2247

Hi

local time here 9.00 am yielded :

*1540 khz KXEL Waterloo IA "newstalk 13-90".

Many stations were audible as late as 0850 gmt but weakly .

Splatter is reduced at this late hour but pulling out the signal from the noisefloor is tricky.

*Radio Reloj (570 khz) and Emisora Mariana (1400 khz) had short powerful peaks.

I heard a Salsa station at 0830 utc on 1200 khz.

*Zoomer Toronto (740 khz) played Blue Berry Hill by Fats Domino 0840 utc.

Cheers

2248. Steerable loop antenna !!!!!

Yahoo group: skywavesmw

From: brian russell
Topic: 2248 Message: 2248

Hi,
This seems an idea worth a try, open the door and let the signals in hi!
72, Brian.

Use your closet door as "super loop"

In accordance with instructions imperfectly recalled from an ancient electronics magazine I once wound a sort of "super loop" antenna around the periphery of a closet door. I don't know how many turns of what kind of wire were supposed to be used, but I did think it was cool that you could swing the door so as to orient the loop properly.
This, plus a variable capacitor, should make a pretty good broadcast-band antenna. Does anyone know the proper specifications, assuming a non-ferrite closet door?
I worked through the math last July, and it turns out that if you use a square form and a standard 0-365 pF tuning capacitor, using about 80 feet (25 meters) of wire will do the trick (irrespective of the size of the square you choose).
A closet door is of course not square, so the wire length will be different (probably longer, but it's been a while since I worked out the math and I can't exactly remember).
You could always drill holes in the door in a square pattern, insert wooden pegs, and use those to wind the loop.
Take care to separate the turns of wire (1 cm or more between adjacent turns is best) to minimize self-capacitance inside the loop. If you don't, the extra unwanted capacitance will prevent the antenna from resonating at the upper ends of its intended range.
There are also companies that sell pre-built loop antennas. However, this is one area where you can save a LOT of money by building your own. I've seen tuned loops that sell for $100 or more, and I spent around $5 on mine.
BTW, the closet door idea is very clever! I may re-build my loop in that way; currently the most awkward thing about it is rotating and orienting it properly without it falling over

.

2259. 1287 khz

Yahoo group: skywavesmw
Date: 2009-11-20 17:43:53 UTC
From: patrice.privat
Topic: 2259 Message: 2259

Hi

Just to let you know that thursday afternoon, I heard a UNID programme between 1530 and 1645 utc on 1287 khz behind Spain.No ID
As it was not synchro with 6973 khz I ruled out Galei Tsahal.
The man was reading a long list in which the same words came over and over, among them "kilohertz AM" and "érikomo".
When the signal eventually peaked and wiped Spain away, I came back to the Hebrew hypothesis coz some words sounded like numbers in Hebrew.
The language was definitely not of the Turkic family nor from the Farsi/Pachto/Kurdi family.
I'm more or less left with the certainty that Galei Tsahal has 2 programmes at that time, one on 1287 and one on 6973 .
Can someone shed some light on this ?
If needed, I can post a clip on box.net sometimes over the weekend.

Cheers de Pat

Hello Mike.

If you want North America, you need to be beaming a flag aerial approximately 270 - 300 degrees for the east coast DX. Slightly higher at 330 degrees to catch west coast DX. It varies with conditions and stations are often a little off-beam.

The best time for UK DXers to listen to North America is around local sunrise, but the DX can often be heard from late evening.

Conditions have been disappointing for the last few days, however there have been one or two exotic stations getting through from further west while the east coast regulars have been subdued. Note my reception of CBR and KSL yesterday. DXers north of the border are hearing much more. Being located at a higher latitude brings its rewards.

Good DX!

John

2263. Matlock Forest DX Trip: 19-11-09

Yahoo group: skywavesmw
Date: 2009-11-21 15:48:18 UTC
From: John Faulkner
Topic: 2263 Message: 2263

This was our most successful Matlock Forest DX trip so far!

This time we were able to eliminate the interference from the Megane car electronics which resulted in a lovely quiet band. I wondered if this might have been due to a slightly different beverage arrangement. Instead of using a terminating resistor (it failed on the day) we simply terminated the far end of the beverage straight to earth. The beverage was laid on the ground as usual.

One thing which aided station identification was the time signals which are aired by each country. While I realise this will not provide positive station identification for some DXers, it proves that the stations themselves were getting through. Time signals are like morse code in the way that they are able to penetrate the noise, even when very weak, and the time signals of China, Korea and Japan are very distinctive. Tim explains:

"The Japanese (NHK) & Korean time pips (they only have one pip each) were measured at 875Hz. They are virtually identical and longer than other countries pips. A distinctive characteristic of these is that they gradually fade out. Also note that Japanese & Korean time pips are always on time. Chinese six pips are sometimes late and were heard as much as 16 seconds after the top of the hour. Useful characteristics of the Chinese pips are that the first five pips were measured at 800Hz and the sixth pip at 1600Hz - one octave higher! The Taiwanese stations we heard did not have time pips. Also worthy of note is that some of the Russian time pips are also late, particularly the Siberian stations. i.e. Surgut on 225kHz was 2 seconds late when heard by Tim on the 18th Nov."

We were amazed to note that sometimes two and as many as three different Chinese transmitters were heard on some frequencies. 540 was a good example where three sets of pips were heard, all a few seconds apart from each other. We have listed these in the log as "multi tx".

Here is the log:

216 Gollos Rossi, Krasnoyarsk, chimes under RMC 222 1700 18/11 TB/JF

225 Gollos Rossi, Surgut, chimes, nx under POL 333 1700 18/11 TB/JF

Did you actually *listen* to the content, or just time pips / chimes? :-)

It is not Golos Rossii, but R.Rossii something *very* different !!
You should know that :-)
Listen to 171 / 261 to find out

Thank You JOHN. I do have the details of the FLAG antenna, I think its 25 feet top by 2 x 10 feet drop down each end with a 850 ohm resistor hope thats right or like a inverted U, getting that resistor or mix of same maybe a problem for me here in the back woods of beyond. My Problem - about a week ago brain dead under me came up and he thinks I have some form of into the floor death ray up here, I called the police and last tuesday he got a finale council warning, thing is I am - plus my wife and others in this block of 4 flats are now quite worried to go outside so we are all ducking and diving with our movements, yes what a way to live, the bottom line is I can only do things while he and his partener are out getting stoned, such a wire down the garden may upset him, could such a FLAG antenna be put in a loft, BTW I have a T2FD here hope you and others know what that is, that was down the garden for a while, but we got re tiled and I never put it up again. Thanks for the bearings, at the moments its all up to the loop. I have been noteing your logs, well I did get to Taiwan, hearing Family Radio must have been right time, right conditions, freq was 1.557 at 15.15 BST REL prog was on air, that is some going for a loop. Many Thanks. Mike.

That's right Jurgen. Thanks for the correction. Tim emailed me this evening to explain that he had got a couple of the stations/sites confused.

If the logging is stated with just "time pips" then that is all that was heard. It's a shame there was not more audio on some of the signals, but clearly these were the stations which got through, albeit very weakly. As explained in the article, the time pips are quite unique and we thought it was better to include them in the log to show the DX possibilities. There is nothing else they could have been.

Hello Brian.

That's right, threading the wires through the trees would be more time-consuming, but we might just do that for an Alaskan trip. Directivity has always been improved when the wire is a metre or more above the ground. The BOG works pretty well anyway.

Then there's the curious members of the public. We were watched by somebody the other day while they parked their car next to the beverage feed point and scrutinised the connections. It puts me off a bit.

Cheers

John

From: Mike
Topic: 2273 Message: 2273

Hi. Well set the clock for 07.30 BST sunrise time so the web said, for my try out at MW dxing, not new to it but had left it some years ago, what have they done to the band the qrm is very heavy could be local to me but not all. Here is my report such as it is.
RX Kenwood TS 460 bandwidth 2.4 khz.
07.42 on 0.660khz WFAN NY advert, voice level just above a whisper.
08.10 on 1.130khz WBBR NY man-women talk, voice level a bit better.
08.15 on 1.520khz WWKB NY poss - very weak.
Well NY was coming in but far from well! My QRM seems not only to be mains bound but air bound as well so must do a walkabout or not use the mains rx, reception MUST get better, not at least I heard something, I think my Degen DE 1130 might do a better job! Thanks John F for the bearings a great help. Mike Bungay Suffolk.

Hi,
Today on a wet afternoon I erected a Flag antenna, 30ft top x 15ft verticals,
the orientation is 340 degrees (by compass) being a product of the house / mast siting.
I would appreciate what I should be looking for from US stations, if any !!!!
One my Great Circle map it would seem to favour a line Greenland - White Horse ?????
Expert opinions most welcome.

Date: 2009-11-22 20:10:47 UTC
From: patrice.privat
Topic: 2278 Message: 2278

Hiya,

It all comes down to the question of personal standards AND personal ideas of fun.
Let us be broad-minded in that respect.
After all, the easier the criteria, the more you enter in your logbook, the faster you reach the hard limit.
If you take in all that's on the air in a short time, you're left with the task of finding new horizons sooner.
For that matter, I never tried to do any TV DX with the sole carrier traces on Spectran as a proof because first it was technically boring and then what's the use of logging Cameroon if you never end up with a picture ? But why not let other aficionados get their kicks out of it ?
Same with MW stations, I prefer to starve for weeks rather than officialising the piles of "tentatives".
I'd be over 100 stations if I did.
But you have to admit that everyone sees Noon in their own private garden as we say in French.
Think of NDBs (beacons) some people play by (Spectran) screen and wait for the dots and lines to be neat on the monitor, others by ear, some with filters, some without.
As long as you re accurate on how you came to your conclusions, there's no harm to my mind.
I've set my own assessment chart for TA DX that puts me now (with Mexico City's Formula) at 22/40 but it will be a sad day when I reach 40. Coz it seems very unlikely to me to catch Vanuatu or the funky Samoans on MW from this here shack.
Cheers de Pat

i have nothing against anyone logging "pips" but for me personally no spoken id or id by picture on tvdx i simply dont log it. its like cjvb on 1470 we all know the pips are theirs but would you be content with just that.

its the same with kbrw i untill recently never had an id from them but i knew it was them but it didnt go into the log untill i got a spoken id ... each dxer to their own but for me it has to be a spoken id BUT !! that is dxing trying to id the far east stuff its hard enough to id english ones lol cheers david h

John,
Well you do always seem to attract an ' audience ',
maybe you should consider charging hi!
Keep up the good work, especially on 80m when you can.
72, Brian, G0NSL-QRP.

Yes, I think I may have misunderstood this. I have just been chatting to Tim on the phone and he said that the Korean pip also fades out like the Japanese. Apologies.

Further to the log, Tim has discovered something else interesting on the Matlock Forest recordings. There are time pips which appear at 15:30 on 999kHz. It is unusual to hear pips on the half hour and Tim managed to find parallels with 153, 891 and 1287kHz. So it looks like we had R Yunost from Birobidzhan. This transmitter is listed as using 7kw and is from eastern Siberia!

We also discussed the possibilities of trying an Alaskan beverage to the west of the Pennines. All to come in the weeks ahead all being well. If anybody would like to join us please get in touch.

From: fast_logger
Topic: 2295 Message: 2295

Hi

Propagation is still minimal or absent on MW and has been so the past 12 days.
Surprisingly the 2 stations that are audible are on opposite sides of the Texas/Mexican border.
These are KVNS Brownsville on 1700 and XERF Ciudad Acuna on 1570 khz.

The latter offered a splendid ID at 0800 UTC this morning with callsign "equis erré é éffé", frequency (mil quinientos setenta), power (potencia) in watts and slogan "La Poderosa".
Before that there was a Ranchera ballad "Yo soy un Vaquero" which made my day (break).

Check both clips at :

http://www.box.net/shared/ja3pxlpmpx

http://www.box.net/shared/igvn75vtbs

SaveShortwave2 - epetition response

We received a petition asking:

?We the undersigned petition the Prime Minister to require the relevant regulatory authority namely Ofcom to take active and speedy measures to test samples of all makes and types of PLT device and to remove from the UK market all those devices where the sample is found to be non compliant with the requirements of the Electromagnetic Compatibility Regulations 2006. And to take all practicable and necessary steps to prevent anyone placing non compliant PLT devices on the UK market now and in the future. The Department for Business Enterprise and Regulatory Reform and Ofcom are familiar with these devices they being widely distributed by a national communications supplier, various high street stores and on the Internet. These devices are used to transfer electronic data via domestic electrical household wiring and the techniques involved in typical use result in harmful interference to short wave radio reception.?

Details of Petition:

?The Government has confirmed in their response to the ?Saveshortwave? petition that ?Power Line Technology (PLT) equipment is required to meet the relevant regulations.? The relevant regulations are the Electromagnetic Compatibility Regulations 2006 (the Regulations) for which BERR is responsible. Independent testing to date has shown that PLT devices do not and cannot meet the requirements of the Regulations. Furthermore, continuing numbers of complaints of harmful radio interference from PLT devices amply illustrate that in practical applications they do not meet the ?Essential Requirements? of the Regulations and prevent other equipment from functioning as intended. Irrespective of and notwithstanding the number of recorded complaints of interference, we call on BERR to comply with the law, namely the provisions of the Regulations which are based on a European Directive, and to expeditiously remove this menace from the market by the means as set out above.?

? Read the petition <http://petitions.pm.gov.uk/SaveShortwave2>
? Petitions homepage <http://petitions.number10.gov.uk/>

Read the Government?s response

Thank you for the E-petition about testing Power Line Technology (PLT) equipment.

The Department for Business Innovation and Skills is responsible for the Electromagnetic Compatibility (EMC) Regulations 2006. Enforcement powers are delegated to local Trading Standards offices and to the Regulator, the Office of Communications (Ofcom), where there is a radio spectrum protection or management issue. Ofcom is the body responsible for the management of the civil radio spectrum in the UK.

In the last twelve months Ofcom have received 143 individual PLT interference complaints about inability to receive radio transmissions in the High Frequency (HF) band (3 to 30MHz). Of these, 121 have been investigated and referred to the apparatus supplier who has resolved 104. The solutions employed include replacing the apparatus, hard wiring and conventional wireless alternatives.

As a result of the Regulator?s investigations which found no breach of the EMC requirements, Ofcom decided against taking further enforcement action at this time. Ofcom is therefore working to reduce any negative effects in individual cases with BT, the largest supplier, and with Comtrend UK Ltd, which supplies the apparatus as part of the BT Vision package. Further information about PLT and Ofcom may be found on their website:

http://www.ofcom.org.uk/radiocomms/ifi/enforcement/plt/

On the available evidence, we do not believe an outright ban of all powerline equipment is justified.

Ofcom can provide advice and assistance to those who complain of interference with radio communications equipment. Any individuals who wish to report specific cases of interference that may be caused by PLT apparatus, or any other source, should contact Ofcom?s Advisory Team on 0300 123 3333 0300 123 3333 for further assistance.

2300. [Fwd: News of the power line adaptor situation from UKQRM]

Yahoo group: skywavesmw
Date: 2009-12-10 13:18:04 UTC
From: John Faulkner
Topic: 2300 Message: 2300

From the UKQRM Site:

Finally after a long delay the UK government has responded to the UKQRM e-petition regarding Power Line Transmissions and Power Line Adaptors or Home Plugs.

What this shows is that the government has utter contempt for the public and its wishes. (remember this at the elections)
We have proved that these devices fail by a great deal, the regulations in place!
Yet, Ofcom still says they pass.
This is a ridiculous situation.

I'd like to thank all of you who voted in the petition, your vote was not wasted as it forms the basis for us to go forward.

The RSGB has stated its intention to look at a legal challenge to Ofcom due to its total failure to apply the UK laws and regulations as they stand.

PLT, is the biggest single threat to our hobbies of short wave radio listening ever, really it is.

If we don't make a stand now then a time is not far away when every home in the UK and across much of the EU will have PLT pumping out noise and interference over the range 2-40Mhz.
Currently here in the UK the BT supplied Comtrend units have shown they are capable of causing harmful interference at ranges of 500 meters and worse still its been proved that this interference is re broadcast by street lighting and telephone poles, thus the range is further increased.

The noise background is set to rise even for those of you lucky enough to live in an isolated location.

Shortwave will become a thing of the past for most of us if we can't turn back the tide.

I really hope that more of you will want to join us on UKQRM and it would be nice to see other groups like us formed in our EU countries.

For more information, videos and data please have a look at our web site.

And finally, don't be fooled by the claims that PLT is 'notched' for the amateur bands, while some do have notches they are not good enough and by favouring the amateur bands like this they are inviting all manner of determined broadcasters to switch to those protected bands to get their message out! Thus the amateur bands will become full of illicit

broadcasters.
Plus, by the very fact that they are notching out some bands it proves they accept these devices cause harmful interference!

The RSGB is the only organisation with the skills and resources to fight the UK government on the
PLT issue. The RSGB has now made this announcement:

(The RSGB) has established a Spectrum Defence Fund to challenge Ofcom over its interpretation of the
various Acts and Directives that cover PLA/PLT and the threat they pose. This may take the form of a
Judicial Review, but we will be advised by our lawyers on the direction to take. The cost of a
Judicial Review is likely to be in excess of ?75,000 and we are not guaranteed success. But now is
the time to stand up and be counted and make it known that we, as a community of radio amateurs and
short wave listeners alike are not prepared to accept any level of interference from non-compliant
devices. We are looking to our administration, Ofcom, to protect our interests, which is their
statutory duty. This is a long term project and all monies donated will be ring-fenced for those
actions alone.

http://www.rsgb.org/defencefund/

You can make donations online. The donations page uses the RSGB online order system and shows an
order value of 1 GBP but the true value will be the amount you select. I hope all UK members will
give something for this important challenge. Even a small donation will demonstrate your commitment
to the cause

- Julian

The last 7 days have been amazing. There was so much to be found on my morning recordings that I just could not catch up listening to all, it takes ages to go thru each channel.
Now I do a vertical scan using StationList's playback-selector, For each channel I go thru the 0700-0900 toh files of several days and check if something unusal appears, that alerted me of KYCY that I otherwise would have overlooked since only CBE can be heard usually

And I got big surprises:

Some highlights:
1550 KYCY my first from San Francisco
1300 KKOL at 13:45 in the afternoon,
Murphy was on vacation, the ID came just during a peak !

1230 CFFB-CBC North, Iqaluit, NT,
1520 KMSR Mayville, daytimer signing off at 2300

regulars not listed like KNX, CHQR, CKWX, CJVB etc.

Currently at 1320 utc (!!) I am hearing CJVB-1470 with good levels
and also 1410 CFTE, Alaska shows carriers, too

On 1499.998 I heard briefly very weak audio, this might be KUMU

Seems that is indeed KUMU, they are playing light music // FM,
Mauno confirmed that
It was audible a few more periods the last hour.

Has anyone found a web steam for KUMU-FM?

Also a strong carrier 1500.005 that briefly made it to audio too, but can't
tell who that is

570 CKGL Kitchener ON. Splatter City! A string of numbers being read out, possibly an FM frequency or a phone number, but "CKGL" letters clearly heard F 0700 15/12 JF

750 WSB Atlanta GA. "Live team coverage, breaking news, WSB Atlanta" well above CBGY G 0800 15/12 JF

1290 WJNO West Palm Beach FL. "This is 12-90 WJNO, radio for ...?..., right now it?s 11 o? clock in South Florida" F 0400 15/12 JF

Also rans: 550 WSAU, 1010 CBR (v weak 08:00 with CBC new jingle)

An unusual one this morning. Florida seemed to be enhanced. Tentative WIOD 610 and WMYR 1410. WSB was quite a hefty signal too so some southern enhancement. The Great Lakes were also coming in very well with Chicago area well received and Detroit booming in on 760. Possible CJOB on 680 around 05:00 & 06:00. There was a Spanish station on 1110 coming in very well at 09:00 but the ID was splattered out by local Derby - anybody else hear this?

Radio Disney made a surprise return to 1650 throughout this morning but I also heard Indian music on the channel around 03:00. CINA? This was NOT R Shalom and was heard mixing with it.

All in all there were some good signals on the band but equally some of the regulars were quite subdued.

This morning also saw what is probably my latest ever fade-out of TA DX with lots of TA audio audio coming through at 10:00. Most of it was quite weak but of the stations I identified at this time, they were all the usual east coasters. The carrier from WWKB on 1520 was still present at midday.

Good DX!

610 WIOD Miami FL. "Newsradio 6-10 WIOD Miami" ID under CHNC.
Initially fair but faded quickly F 0800 16/12 JF

980 *CJME Regina SK*. "Regina's number one news and information
station, 9-80 CJME ... A Rocco (?) radio station" Canadian Press
newsroom *Personal First!* Vw 0900 16/12 JF

Also 740 CBX, w/f 08:00.

The band was immensely difficult this morning with an increased amount
of splatter across the band. 09:00 was much, much better, but with TA
signals fading rapidly I was lucky to catch anything. CJME on 980 was a
nice surprise.

Good DX!

2319. Optical transmission reduces QRN

Yahoo group: skywavesmw
Date: 2009-12-17 09:40:38 UTC
From: Julian Hardstone
Topic: 2319 Message: 2319

Stefan Sch?fer DK7FC has recently posted on an amateur radio forum that he is using an optical fibre
link for MF reception, to avoid conduction of QRN along the co-ax from the house back to the E-field
(mini-whip) antenna

"Then I have done many tests with many many ferrite cores e.g. 20x FT50-77 plus 20x FT50-43 plus 20x
FT50-61 and e few others. I placed them all in series, partly in the near of the preamp and/or in
the near of the RX. Sure, there was a significant reduction of noise but lastly the noise remains."

"What I have done then (since 4 days) is using a coupling link by an optic transmission of the
137kHz signal between the preamp and my RX using a SFH750V as the TX Diode and a SFH350 as the RX
and abt 20m of a fiber optic cable (yes, there are surely more suited components but these were
available in the moment). These are also used as optic links into high end audio systems and
therefore easy to get... The overall noise level decreased to its absolute minimum during all the
tests."

"One small disadvantage of this method is the need for a battery supply. My TX diode needs abt 20mA
and is now working since 3 days with a 7AH Lead Acid battery. In the future I plan to use a stereo
optic cable. Then, one could switch the preamp on and off by the seconds line doing it the opposite
way."

Stefan could previously only hear the German high power commercial stations on LW, but can now hear
amateurs on 137kHz
He also suggests that the fibre could be replaced by a laser (IR?) for an antenna outside your own
premises, up to a few hundred metres
He has not yet given details of the optical driver + receiver circuits, but I shall watch out for
these

I am not sure how he did it, just slipped them over the coax? He could not have wind the coax on these small things.
That is pretty uneffective, it is just one winding resulting in a low inductivity. No wonder he did not get much attenuation.

Further: was the antenna grounded? Probably not. so impedance to ground was high, and thus reducing the attenuation effect of the choke even more.
Seems he does not know ohm's law and voltage divider principle (for RF)

No wonder that he resorted to that odd solution. Placing opto-coupler in series will deteriote weak signal one way or the other.

WWKB still audible here at 10:45 local, I am hearing it while I work, because
in the background KOKC lingers and I hoped it would dominate once

So it seems a bit more south from here do not profit much

Hi all,

have just been watching "The art of Russia" on BBC4 which had an interesting piece on the Shukov radio tower in Moscow which pretty much blew me away, an astounding piece of architecture.

The show is here http://www.bbc.co.uk/programmes/b00phtcz and the piece is 12 minutes in.

Looks nice at night too http://www.flickr.com/photos/mclipsco/2406272584/

regards

Paul Logan,

Great stuff Mark!

I haven't been listening too much due to an unexpected Christmas
timetable which has resulted in fewer and more brief listening sessions.

Good DX!

2336. Antenna advice

Yahoo group: skywavesmw
Date: 2009-12-29 13:27:42 UTC
From: Daviesruby@aol.com
Topic: 2336 Message: 2336

Hi Everyone

Im having problems with nulling my Conti loop antenna (Same as flag) I can null Holland on 1008 down to S1 in the afternoon,but its S10+ on the vertical. (Have not tried chancing the resistance at night)But as soon as darkness comes its back up again to nearly the same as the vertical, it is mixing with Spain. Would my vertical (32 foot tall) which is aboy 10 foot away play a part in this ?

Thanks for any advice

Mark

The loop measures 10x20ft, with a variable resistor in one corner and a 16:1 balun there other

Maybe the vertical plays some part in the overall situation, but I too have a vertical amateur radio aerial about six feet from my flag and this does not seem to bother it.

Skywaves signals will increase at night anyway, but one of the best things about the flag is that is has a good skyward null and, from personal experience, Holland does not really come up much at night. Definitely give your terminating resistor a n adjustment at night as this will probably remove Holland completely. I can barely hear Holland at night here and Spain takes over the channel.

From: John Faulkner
Topic: 2338 Message: 2338

570 WSYR Syracuse NY. "Radio 5-70 WSYR Syracuse" heard underneath Cuba
Weak 0800 29/12 JF

1290 CFRW Winnipeg MB. As per web stream. Fair peaks! Fair 0300 29/12 JF

1290 WJNO West Palm Beach FL. "It?s 3 o? clock in South Florida ...
WJNO" in severe pile-up. Fair 0800 29/12 JF

An unusual morning with an odd fadeout. TA carriers were noted at 10:00 with little audio but there were lots more carriers at 11:00, including audio from WWKB 1520. By 12:00 there was only one carrier to found - on 1250! Earlier in the morning 1290 CFRW was in at fair levels at 03:00.

The TA peak seemed to occur at 08:00 for me. At this time I believe I heard the CBS News jingle on 640. I wonder if KFI carry CBS news. 1340 had good audio at 08:00 with some nondescript music consisting of long notes. This peaked right on the hour but there was no ID. I had an English station on 1570 at 08:00 and a "News Station" ID on 1380 at 07:00. I think the words which preceded this were "Rapid City's" but it was not clear. Maybe somebody else can pick these out in their recordings.

Anything prior to 07:00 has not been checked - I have run out of time to check

Good DX!

2341. Articles on terminated loops

Yahoo group: skywavesmw
Date: 2010-01-05 15:23:26 UTC
From: Paul Logan
Topic: 2341 Message: 2341

Hi all,

the following two mails to the ultralight list may be of interest to some - articles covering remote termination of loops and small indoor terminated loops - enjoy.

Paul

Hi all:

Living in a small townhouse with all of its restrictions on antennas, a good EWE, Super Loop or other highly directional terminated antenna was always just a dream, until I discovered that such antennas can be placed indoors with good results. Just posted to DXer.ca and the Yahoo UltralightDX group is an article which describes the construction and use of a Super Loop that fits in my DX shack but has significantly increased what I can hear, especially TA/TP reception. I closely compared Slinky versus wire construction, the advantages and disadvantages of different size loops, the effect of PVC construction, and how small terminated loops stack up against commercially available active antennas. I also give a very positive review of the new Wellbrook FLG-100, designed for terminated loop use.

As more and more DXers find themselves in restricted quarters with little room to work with, smaller antennas like these, whether used indoors or outdoors, may be the best option available. In combination with the remote termination unit that I posted a little bit ago, my DXing has taken a definite step up, whether coupling the output to an Ultralight or feeding it to a desktop communications receiver.

Here's the DXer.ca link:
http://www.dxer. ca/file-area/ cat_view/ 87-ultra- light-radio- files-area/ 97-ulr-antennas
It is also in Section 5 of the Yahoo UltralightDX group Files section.

Regards - Kevin S
Bainbridge Island, WA

Hi all:

For those of you using or looking at a EWE, Super Loop, Pennant or other terminated loop antenna, just posted to DXer.ca and the Yahoo UltralightDX group is an article about a controller which precisely varies the resistance over a selected range. In experimenting with a Conti Super Loop, I have found that a single resistance value will not provide

acceptable nulls for the entire band (the optimum value can vary by several hundred ohms depending on the target), and that the ability to fine-tune the resistance can make a big difference, since being off by 50-75 ohms might miss the null altogether. This remote termination design allows you to stay in front of the radio while you tweak the resistance for the best null. Thanks to Steve Ratzlaff for the bulk of the design and construction!

Here's the DXer.ca link:
http://www.dxer. ca/file-area/ cat_view/ 87-ultra- light-radio- files-area/ 97-ulr-antennas
It is also in Section 5 of the Yahoo UltralightDX group files section.

From: geirstokkeland
Topic: 2347 Message: 2347

Hi all,

With the Spanish transmitter off overnight Jan 08-09 (back by morning) there was a rare opportunity to log something else. I heard the signal in the uploaded file at 0234 GMT, there is a "... Radio" jingle between the songs.

I would initially guess this is an LPAM, but Merseyland Alt R was also supposed to be on this weekend, writes my friend Svenn.

I would like to ask assistance from the group in tracking down this mystery, I think the jingle might be recognizable by one or more of you?

Any help much appreciated!

Geir, Vestnes, Norway

Geir - Nice catch. I'm hearing "Radio W A" but there is nothing like this in the Ofcom station lists
From http://www.ofcom.org.uk/static/radiolicensing/rsls/longterm_rsls.htm we find 1386 has:
Anker Radio, George Eliot Hospital
Blast 1386, Reading College
Carillon Radio, Loughborough Hospital
Carillon Radio, Coalville Hospital
HCR, Halesowen College Radio
Radio City Swansea, Singleton Hospital
Traffic Radio, The NEC Birmingham
VI Radio, West of England School
and from http://www.ofcom.org.uk/radio/ifi/rbl/engineering/tech_parameters/#content we also have
JCOM, Leeds CR AM
Good luck - Julian

Thanks to you, Paul and Andrew who have responded to this one.

I logged Carillon a couple of times before the Spaniard appeared on 1386, and Blast was a "local" when I worked in Newbury, W Berks. 2004/05. JCom is what I believe is the latest addition on 1386, Leeds would be a candidate based on distance - but Carillon appears to be the most regularly logged 1386 LPAM over here.

Traffic Radio would ID as "Traffic Radio WMA" (West Midlands?), I read somewhere else (www.emwg.info, I think), perhaps that is the closest to "W A".

On 1170 at 10 GMT Swansea Sound was good, along with Magic 1170 and a Gold stn (Stoke?).

Hi Mike, Have they reduced the power in the last few weeks or has it been 10Kw since they came back?

When big L came back with sponsorship from KBC, playing Wolfe Man Jack the signal was fairly good here in Birmingham on a dipole cut for the 48 metre band & my ancient Trio R600. Not had a chance to listen for a few weeks. I think the modulation could do with a tweak as it WMJ didn't sound as good as he did when KBC was on 6055 Khz.

Hi Nigel. Yes the mod is lacking but then again I have loss 20% of my top notes in both ears so like treble settings on my radios, even so mod is still a bit flat, no ring to it.
Ads are still from KBC.
The progs are on auto I think with one tune from the Everly Bros and the next something from come dancing!!

News is from Sky with female.

I recall they had a visit from some guy who said they could do better is was in a TV prog last year, he was right, but I think that statement has had little effect.
I was thinking I could now take more baths lol as a radio in there made bath time a pleasant time, but not with there present format I would rather stay unclean, LUX was good at bath time and I was hoping Big L was going to be a replacement and seeing as I do not listen to British stations on MW only the Dutch presentation I think Big Smell is not going to do it for me, still nice that there there and that's it.
Must go on line to see there schedule details, and see what PEP there running.
How long will they last this time, seem to have a few ads other than KBC which will be handy for the CB group and radio buyers, but getting known will be the main challenge won't it.

2363. CINF 690 and CINW 940 Montreal Shut down at 0000 1-30-10

Yahoo group: skywavesmw
Date: 2010-01-29 23:36:06 UTC
From: Mike B.
Topic: 2362 Message: 2363

Both stations are shutting down permanently at 7pm local time (0000UTC) tonight, citing poor economic conditions.
Currently 940 is running a loop thanking their advertisers and listeners. Regular programming ended at 10am local time this morning. I imagine 690 is doing the same in French.

So Europe loses two North American DX stations and DXers on the East Coast of North America gain two new DX channels.

Thanks Mike,
I just saw your msg early enough, heard the announcement a few times and then
it went away.
This waterfall shows it:
http://dx.3sdesign.de/temp/Spectr-100130-0104-CINW-950-closedown.jpg

CJGX remains as a weak carrier

940 is tough here due to my local R. Bremen-936
CINF was even rarer, also due to BBC-R5 on 693

Seeing a very weak carrier of 0Hz, tent CBU ?

2365. Oldies on 800 Mystery

Yahoo group: skywavesmw
Date: 2010-01-30 13:03:30 UTC
From: John Faulkner
Topic: 2365 Message: 2365

Intrigued by an oldies station on 800 this morning.

06:59 Billy Ocean - Caribbean Queen
07:00 Bread - Baby I'm A Want You
07:09 Sounds like Bryan Adams Please Forgive Me (but isn't)
07:11 Neil Diamond - Sweet Caroline
07:13 Female singer
07:18 Female singer similar to Shania Twain or LeAnn Rimes
07:26 Lionel Richie - Stuck On You
07:29 Tina Turner - What's Love Got To Do With It
07:34 "It's Not Unusual" but not by Tom Jones
07:35 Crooner
07:45:14 - Jingle - unclear/buried!
07:45 Folk song immediately after jingle.
07:47 OM talk followed by more folk. Clearly VOWR took over at this point.

Lots of back-to-back songs. No actual speech heard though. Probably not VOWR as this took over suddenly at 07:45. There did seem to be two oldies/music stations at times though, particularly around 07:30. One presumably VOWR, but who is the other?

Did anybody else hear this?

Good signals from Chicago area and the Great Lakes at the same time. Notably WCUB was also being heard on 980.

John

Congrats on WNKR Mark. That's quite a rarity. WNKR do indeed carry ESPN.
The usual sports station there is WEEI in Boston, but I am fairly sure
they are just on the Boston Red Sox Network.

2369. Google Earth KMZ Files for US/Canadian AM BCB stations

Yahoo group: skywavesmw
Date: 2010-02-05 17:22:59 UTC
From: kugellagers
Topic: 2369 Message: 2369

I have uploaded several Google Earth KMZ files I created using various data sources (mostly FCC). These can be opened in Google Earth on your computer and plot the AM BCB stations in the US and Canada. A third file plots the LW beacons from William Hepburns LW Beacon web page.

These files can be found in the 'files' section of this group under 'Kugellager's Google Earth Files'

I also have created KMZ files for US FM and US Low-Power FM stations as well as Global LW DGPS stations if anyone is interested. These have not been uploaded.

Cheers,

John

The WRTH editorial team is pleased to announce that a file containing updates to the Winter/B09 schedules is now available to download from the WRTH website: http://www.wrth.com and click on the "Latest PDF Updates" link

You will need the free Adobe Acrobat reader (available from http://www.adobe

Com) in order to view this file.

The file is 234kb in size and contains schedule updates for international and Clandestine/Target broadcasters plus details of 3 new stations.

We hope you find this a useful accompaniment to the printed WRTH.

Regards,

Sean Gilbert - WRTH International Editor

2372. antenna advice

Yahoo group: skywavesmw
Date: 2010-02-18 13:33:23 UTC
From: Daviesruby@aol.com
Topic: 2372 Message: 2372

Hi Everyone

I recently posted a mail to the group regarding the problems I was having with my flag antenna and received some great advice for which I am very grateful.

Following that I decided to put up a delta flag antenna as I thought that the vertical elements of the flag may be coupling with vertical antennae nearby. the reasoning being that the diagonal element would be less likely to be affected by the verticals.

This again was not nulling as I would hope. The delta flag was fed in one corner and had the resistor in the other. The base was 20 ft long. I then decided to lengthen the bottom wire so the middle could be pinned down centrally and earthed - its like a diamond or arrow head shape. The feed and resistor points stayed in the same position. I thought this would in essence be like a K9AY. The nulls were marginal. Out of curiosity I disconnected the earth retaining the shape. Resistor value approx 300ohm. I can now get nulls up to S7 points, S3-4 common acrosss the band. This is in daytime. The pickup to the west (Ireland) is as good as my vertical for 40m which I use as a reference.

As soon as there is a hint of darkness however, the nulls get less and less ie Holland on 1008 30+ on the vertical and S8 on delta, whereas I can almost null it in the day. Is this right ? It is obviously nulling at low angle but as soon as the higher skywaves come in its not doing anything. I have not tried varying the resistor in darkness or using it with the earth in place at night.

Am I expecting too much ?

Any advice very much appreciated

Thanks again

hi for a flag etc you dont need a ground also you dont say if you are using a variable or fixed resistor. best way is use a variable resistor and get the null on the dutch the best you can and then forget about it i can get rid of the dutch completely but some nights it will be there and some not.

also are you using a balun at the feed point on my flag without a balun i dont get any null at all hope this helps cheers david h http://band1tvdx.blogspot.com/

2374. Help ID 1160 KHz KAN

Yahoo group: skywavesmw
Date: 2010-02-21 10:01:42 UTC
From: Andy Pritchard
Topic: 2372 Message: 2374

Hi All

I was tuning around in the early hours this morning and found a radio station which I think is from across the Atlantic. The station was playing continuous music with the occasional spoken station ident KAN. I have searched on the net but have been unable to identify it

Anybody know of this station?

Andy, M0CYP - Telford

Topic: 2372 Message: 2375

The most regular station reported on 1160 is WYLL in Chicago and has
been heard nightly - whenever I have listened.

The closest-sounding call would be KSL in Salt Lake City, Utah but they
carry a news/talk format. KSL have been heard a few times this season
but are traditionally very rare.

The only other guess might be VSB3 from Bermuda - also very rare. I was
wondering if they might have increased power or changed antenna pattern
and you heard the 'BBN' - Bible Broadcast Network (sounds like 'KAN').
VSB3 also carry BBC World Service and possibly other networks.

Either way, none of them sound quite like 'KAN'. It's unusual to hear a
non-stop music format on 1160. Sorry, clutching at straws with this one.

Seems to show mirror frequencies: it looks lik it hears Big L on 1405 kHz, Euskadi on 1414 kHz and France on 1423 kHz ... ?

Also surprisingly high CPU load, what kind of computer is in use?

2384. Re: [skywavesmw] PMSDR

Yahoo group: skywavesmw
Date: 2010-02-23 15:02:27 UTC
From: John Marsyla
Topic: 2371 Message: 2384

Hello Mauno,

There are no mirror frequencies on the original Winrad 1.33 recording.
I just noticed that too on David's Youtube demo.
I see that David has used WinradHD to play the recording and
there is something wrong with the frequency display.

I will ask David to make another Youtube demo with Winrad 1.33
showing the correct frequency display.
Anyhow thanks for your comment.

Correct the CPU is a bit high on my old 1600 Mhz - 512 mb RAM computer
but I had also Windows Messenger running at the same time.
A new computer is in back order.

regards,
John

2387. Persius???

Yahoo group: skywavesmw
Date: 2010-02-28 10:20:28 UTC
From: Lee
Topic: 2387 Message: 2387

Hi All...

I am seriously considering a Persius SDR - I already have a Winradio 305 SDR but would prefer the agile frequency control of the Persius and the ability to record up to 1.2megs bandwidth for perusal ...
I may let go of the Winradio but it is usefull up to 1800megs! and it works quite well ... on the other hand, it may help fund a new Persius.

Anyone tired of their Persius or got a spare they need shut of ??? ;o)

Your thoughts?

Lee ... G6ZSG.

Topic: 2387 Message: 2388

It has 2MHz recording bandwidth Lee.

I'm not tired of mine. Sorry, not parting with this one ;0) There are one or two rivals out there now which might be worth trying. I haven't seen any comparisons so far but no doubt there will be some out there. Wish I could remember more details of these alternatives. I think there is a new Winradio and I know there are others, some more ham related. Anybody?

John

> It has 2MHz recording bandwidth Lee.

That's a bit misleading.

It records with 2MS/s that gives you a 1600kHz wide recording.
Tuning beyond +/- 800kHz from center is now inhibited. It used to be possible with earlier versions

Lee I would keep WR305 and get Perseus. Both compliment each other nicely. I would not give away either one.
Now with SpectrumLab you can use Perseus as an excellent FM tuner also with superb filter properties. You need a downconverter of course

Thanks for the comments.

I Just dragged a quote off Persius` site John ...

"The PERSEUS software supports wideband spectrum record/playback up to 2 MSPS with alias images rejection larger than 110 dB in a 1600 kHz bandwidth!".

If MSPS means MHz, fine, but 1600kHz is still a darn sight more than the 30kHz I get using some third party s/ware with the Winradio 305!

Really, I am just looking around at the moment and the Winradio Excalibur looks very interesting also, except that winradio are very hard to get in touch with once they have your hard cash in their hands.

My Winradio works well up to 1.8Gig so I can`t complain really.

Regards.

I have the 305i Jurgen; which drops into an IDE slot in the PC-nicely
out of sight! I also had the sense to purchase the "Professional"
demodulator software at the same time plus the DRM software too.

I have the filtered Kenwood 6040 + Conrad, so not too worried about
the FM UKW band DX, but the 305i makes a good band one monitor which
I learned from your website ... Thanks!

I am considering the Excalibur from Winradio also Jurgen, I wonder
what you think of it?

Regards.

Lee ...G6ZSG.

I got the prof. demodulator, for DRM I use Dream.

That probably gave you quite a new DX feeling, right? :-)

> I am considering the Excalibur from Winradio also Jurgen, I wonder

I have not looked into, but it is weird they come up with that, *after* Perseus appeared.
Recording 1600kHz wide does make sense for the lower bands like MW, but not really for 88-108 when only 16 channels can be covered there, when on MW you get the entire LW and MW covered.
And I never had the need to record 88-108 range

> Excalibur looks very interesting also, except that winradio are very hard
> to get in touch with once they have your hard cash in their hands.

That should wake you up. I experienced the same. Wr305 s/w is static, nothing is improved or expanded. Perseus s/w is more lively, from time to time you get added functions, and the author listens a bit to the users

I have recently purchased a WR 303e (the USB external version)

I chose this simply because it has been around for quite a few
years and (hopefully !) has all the bugs sorted out.

I, too, had some difficulty in dealing with the suppliers because it
seemed that the whole company was involved in an exhibition in,
I think, Paris. It took slightly over 2 weeks to get what I had actually
ordered and payed for !

I have the " professional " decoder, and don't quite understand why
they bother to offer the " Standard " version.

I find that the DRMradio decoder is somewhat easier to use than Dream
but the results are equal.

Unfortunately DRM seems to be disappearing with very few real new
stations and shorter periods of DRM transmissions.

My favourite receiver that I have had for nearly 50 years is a totally
analogue Galaxy R 530 and for DRM and my recent Navtex DXing
this still outperforms any DSR that I've tried !!

Best Wishes

Bob Groom, from the Isle of Wight, UK

Ciao,
with Dario Monferini (PlayDX editor) I was some days in Bocca di Magra, at the sea side. We observed good propagation conditions to Africa on MW. I also received Angola on 1088 kHz. Then on 846 kHz RAI Rome DRM is off and it was possible get with a real nice signal KBC Kenya also with portable and pocket receivers Sangean 909, Degen 1103, Sony SW-100, Tecsun 310, Tecsun 380. Sony performed as the best.

Here some tips:

846 3/3 1810-2015 KBC, Kenya, news in Kiswahili, ids, also Chinese lessons. Good

917 28/2 0520 Radio Gotel, Yola, Nigeria, nice music and talks, fair

1088 3/3 2055-2115 Radio Nacional Angola, Mulenvos, music, id, news in Portuguese, songs. Fair

1431 1/3 1740 Radio Sawa, Djibouti, in Arabic, songs, ids, good long fading

1539 1/3 1804 RTV Djibouti, songs, in // with 4780 but much better on MW ! Very good

1566 3/3 2030 TWR, Parakou, Benin religious talks, music, fair to good at different times

Not sure on WNKR, I've heard they have been active on 1476 & posibly 1593 but not heard anything for a while. If you find the Radio Dr Tim web site I think there should be a link to subscribe to the pirate loggings. As you can see, there is activity most nights after dark, but mainly from Dutch & Greek stations. Saturday night around closing time is the best time for pirate DX. Dont forget to check out 3900 - 3960 too for SW stations too.

Good DX
Nigel

Hi Nigal. Thanks for that, I forgot Dr Tim, I just printed your list out, I am very friendly with Pandora and have been so for many years, don't want to get too open here, but BBMS - Ozone was the game and the name, may try to off-load a few xtals soon on ebay. Mike. gs.

If you find the Radio Dr Tim web site I think there should be a link to subscribe to the pirate loggings. As you can see, there is activity most nights after dark, but mainly from Dutch & Greek stations. Saturday night around closing time is the best time for pirate DX. Dont forget to check out 3900 - 3960 too for SW stations too.

2398. TA signals still audible

Yahoo group: skywavesmw
Date: 2010-03-22 08:39:12 UTC
From: Jurgen Bartels
Topic: 2398 Message: 2398

It is 0935 local, the gray zone is over central Greenland, and I still hear
some east coast channels, like 1180, 1470, 1520, 1560

Yesterday at 0800 local Vancouver 1410, 1470 made it again
The noise level has been very low the last few days, so the weak TA signals
that late are well audible because the Europeans are totally gone at that time.

Yesterday at 0800 local another personal 1st:
1290 USA WRNI Rovidence RI, NPR

Jurgen Bartels Suellwarden, N. Germany
Winradio G305 & Perseus
300m beverage & dual-feed 30x4m EWE pointing 320°
FM 15-ele, SpecLab FM demod using Perseus h/w

Congratulations Jurgen.

I noticed the numbers were quite low yesterday and wondered about recording. I wish I had now.

No Perseus recordings have been made here for the last few weeks because of declining conditions. If they continue to decline, which they probably will now we are beginning to see the rise to the next solar maximum, I may be out of MW DXing for some time. On the other hand, the conditions ahead may allow better conditions to South America. Time will tell.
Good DX all!

John

Hi John,

> I noticed the numbers were quite low yesterday and wondered about
> recording. I wish I had now.

When during the last days reading http://www.solen.info/solar/ *after* the last tx faded away, I should have not rcv'ed anything according to the prediction . That prediction seems to be more valid for regions north of me.

Since early Feb I also stopped MX-DXing since it ate all my time.
But last week I gave it a try and was surprised that signals sounded quite good during my mid-morning, and several unfamilar carriers appeared, so I started recording again. And it is interesting that 0800-0830 local gives the best results, TA-tx are quite weak then but almost free of any interference, so using the beverage is an advantage compared to my EWE
Usually at 0900 all is gone. The noise seems to be lesser than during a quiet winter morning.

> probably will now we are beginning to see the rise to the next solar
> maximum, I may be out of MW DXing for some time. On the other hand, the

Nov & Dec was definetly *the* highlight. Good that I was there, you never know when that will occur again, and if there will be still analog tx around.
Fortunately I still have the recordings to re-create that feeling.

Providing the numbers don't increase before this evening I will record tonight. Thanks for the info Jurgen.

Yes, the back end of last year was exceptional for MW DX. So many amazing catches I never thought I would have here at home. We have been spoilt. ;0)

I am looking forward to the Es on 6m now and hopefully working some new countries. I worked 35 countries last year and hope to increase this to 50+ this season. Only 7 countries worked on 2m so far so plenty of scope to improve things there too.

Cheers

John

2403. Not as good as I had hoped!

Yahoo group: skywavesmw
Date: 2010-03-23 12:07:56 UTC
From: John Faulkner
Topic: 2403 Message: 2403

08:00 is too late here for TA DX Jurgen. My late fade-out has always been well before other DXers in the UK. I never understood why but have always assumed it is because I am in the middle of England and away from any coasts. 06:00 currently gives me my last decent window of DX opportunity. 07:00 is not so good.

So, this morning was uneventful here. The more noteworthy things were:

* I noted Spanish on 1420 at 06:00 but it was splattered to pieces.
* I had Latin music on 1490 at 06:00. There was a noise-penetrating jingle on the hour but any speech was below the mush.

Did anybody else do better?

John
Sutton-in-Ashfield, Notts.

Here fade out was 0800 ut
but I wasn't as good as yesterday, a bit higher noise and weaker strength.
I start recording at 0500 but often these times do not deliver much, sometimes
signal peak only after 0700. Seems the coast leave signals a little longer
around

Yesterday I heard SS on 890 at 0730
http://dx.3sdesign.de/unid/890-unidSS-100322-0730.mp3

Mauricio then had a listen and wrote:
"I hear at sec. 12 "Nueva Mega 8-90, 1400" (ocho-noventa, mil
cuatrocientos). So this point to WAMG/WLLH La Mega 890 AM/1400 AM. From
wikipedia: "WAMG returned to air on December 3, 2009, broadcasting in
Spanish under the moniker "La Nuevo Mega"; simulcast partner WLLH had
returned to the air in late October. Initially operating the station
under" a local marketing agreement, Gois purchased WAMG outright in
January 2010."

I wasn't aware of the format change

> * I noted Spanish on 1420 at 06:00 but it was splattered to pieces.

1490 is still a channel without any logs here, it is just too difficult, too
many carriers

Since Bremen-936 went off air XEQ-940 became regurlary audible, albeit weak
Before it wasn't audible

Hi Mike,

I know WNKR have done some tests on 1503.
Merseyland Alternative Radio are using 1386 most weekends.

Its about time MW was used again for free radio stuff. FM has gone a bit gangster in the last 10 years. AM is much more civalised & Ofcom (whoever they are) don't seem so hot on MW/SW activity.

Enigma is on 846 at the moment, started at 1000 UTC, believed to be from Kent.

They say that they should be on tomorrow as well.

Weak here in North Herts with an Eton E5/loop.

Hi Nigel. Yes MW needs a revival if not for our generation alone we still have a monopoly hanging over us, think at voting time who was to blame and when he/she calls state why there not getting your vote, we shall remember them.
BBMS - Voice Of Freedom - Radio United Kingdom, Pandora what silly station names we had then, run my me, and all on 10 watts.
Even as a VHF dxer the thrill has gone, in fact can't think of the last time I took a radio into the bathroom LOL, Big L and seagull both are a bit of a saver but Pirate Radio {BBC} Essex is a joke Its a BBC Station, well had my say, keep the faith and the fight. Mike MBR.
Gary Stevans, it's what old pirates do wish for the past to return.

Wonder if any members have info re azores and madeira mw stations. Have spent many nights listening but no luck. FM scan lists both islands as having mw stations.
Wonder if list out of date or they are off air, or perhaps its my location here in the south of Gran Canaria that prevented reception. (Mountains between me and these 2 islands)
Transferring to Los Cancajos, Isla de La Palma next week so better QTH with sea paths to these 2 islands.

Also if John is reading this, what format do files have to be uploaded. I have both rtf and .doc on this computer but not sure which to use. Thanks

Hello Ed.

I don't recall seeing any UK loggings of Madeira on MW. Maybe somebody else knows more. Madeira would use the 9kHz European channel which would result in more co-channel QRM, thus making any loggings more difficult perhaps. Personally, I only ever DX the Americas from home and have never tried for Madeira.

Regarding files - what are you wishing to share? You can upload smaller files in whichever format you wish. Plain text takes up less room of course. There is only so much space for files on the Yahoo server. We used to have a website for the storage of member's files, audio, etc. but this has been abandoned.

There are more useful file storage sites on the internet. I would recommend using the free service at www.box.net which allows audio streaming. Mediafire is also useful for the transfer and storage of larger files. I have accounts with both.

Very interesting discussion. Here are a few words about other volcanic islands.

I have had the pleasure of tuning MW on the east coast of Leyte Island in the Philippines a few times in recent years. This is an island mainly stretched north-south, and it is constructed from past volcanic activity (a lot of geothermal stuff there, including power plants). To my amazement from day one on my first trip, I could barely (if at all) hear AM stations on the other side of the island (opposite coast line), taking into consideration inefficient aerial setups. Also semi-local signals that would cross the island´s mountain range at some point were (almost) blocked from reception on my "wrong side" of the island.

The phenomenon is identical to my observations on a very different volcanic island, Jan Mayen, as long ago as the 1981-82 DX season. Same thing there, stations from the west (North America) had much better overall signal levels on the west coast than opposite - and that island is just a few kilometers across.

My conclusion is that if an island is made up of volcanic material, it is of extra importance which side of the island you listen from. Other islands with a different stone/soil would be much easier to "handle". Madeira is volcanic, isn´t it - as are all the Portuguese islands in the Atlantic?

In the Philippines had no Trans-Pacific DX at my location. On the east side of the island however, I am sure luck would be better.

Subject: Re: [skywavesmw] madeira/acores help

I was at Maderia Island last month, for a week Vacation.

And I can confirm the problems with Mountains.

In Funchal/South Coast only 1332 kHz. (RDP Madeira) and 1530 kHz. (PEF AM) was Audible.
North Coast only 1017 kHz. (PEF AM) was Audible.

Both High power Frequencies is off air: 531 is closed (Mast collapsed 2 years ago) and 603 is off Air for a long Time (Mast is collapsed in February 2010)

Here's a News item from http://mediumwave.info/news.html

MADEIRA

Back in Jan'09, the folded monopole used for 531 kHz 10 kW at Pico das Eiras, Porto Santo island, was destroyed in a storm. Being a tower of this type, it meant it could be used as a mast for the VHF-FM antennae too, and it was indeed the case. &nb

I can fully agree.
Several years I was on the northern coast of Tenerife, Canary Islands.
No problem with MW stations from Europe and Morocco (and Madeira) , but nothing from Africa.
I suppose Mount Teide was keeping away these signals,
Max
The Netherlands

Very interesting discussion. Here are a few words about other volcanic islands.

I have had the pleasure of tuning MW on the east coast of Leyte Island in the Philippines a few times in recent years. This is an island mainly stretched north-south, and it is constructed from past volcanic activity (a lot of geothermal stuff there, including power plants). To my amazement from day one on my first trip, I could barely (if at all) hear AM stations on the other side of the island (opposite coast line), taking into consideration inefficient aerial setups. Also semi-local signals that would cross the island´s mountain range at some point were (almost) blocked from reception on my "wrong side" of the island.

The phenomenon is identical to my observations on a very different volcanic island, Jan Mayen, as long ago as the 1981-82 DX season. Same thing there, stations from the west (North America) had much better overall signal levels on the west coast than opposite - and that island is just a few kilometers across.

My conclusion is that if an island is made up of volcanic material, it is of extra importance which side of the island you listen from. Other islands with a different stone/soil would be much easier to "handle". Madeira is volcanic, isn´t it - as are all the Portuguese islands in the Atlantic?

In the Philippines had no Trans-Pacific DX at my location. On the east side of the island however, I am sure luck would be better.

Hello all!

I was asked by Mauno Ritola whether RDP - Antena 1 Madeira on 1125 kHz (Ponta do Pargo - 1 kW) has been closed or inactive. As far as I know, the transmitter is supposed to be active; unfortunaly, I can't check it right now, but I will try to check 1125 kHz at night, (I'll have to use a simple receiver with its ferrite antenna) although I'm afraid QRM and electric noise in my QTH won't help, but anyway I shall try it on my car radio.

As Carlos Gonçalves said (via mediumwave.info), 531 kHz Porto Santo is off forever. 603 kHz Pico do Areeiro also lost the tower, but it appears that RDP didn't take a decision yet, so I hope they are thinking about the situation. Well, I hope they finally decide to reactivate the outlet, but, unfortunately it wouldn't surprise me if RDP chooses to definitively close down the transmitter ...

Best regards,
Luís Carvalho
Portugal

Hi

I imagine FM is the scourge of medium wave DXers with stations moving to FM to save money. There was an article I read, I think in the 'How to listen to the world' book about a medium wave station in Hawaii that had its transmitting mast on a mountain, the terrain was so rocky that it was impossible to bury the earth radials. The resulting lack of coverage meant that it was often possible to see the mast and not hear the station.

This thread reminded me of a QSL I have for Emisora Regional Acores CSA 67 4865 kHz heard between 0715 - 0757 UTC on 26 April 1976. It was the first time that the station had been heard in New Zealand during our evening period, they were on an extended schedule to cover the Portuguese elections.

Paul

many thanks to all who offered advice. Will keep this in mind at La Palma and see what comes up. Have only a SONY ICF SW1 portable so not much use on MW DX with only tiny ferrite ant but you can attach a long wire to the antenna whip which helps a lot and surpisingly when using the mains unit the signal is considerable boosted. Have used its active atenna unit but not much help. On FM DX the set is super with no complaints.

re John F..just to upload bandscans from La Palma they will be small as not many FMers on the island..HI.

re Niels.. Yes have found mountains a problem here in Canarias, although some stations seem to be well below expected levels. Europa FM, which is only a few miles away always comes in weak. Only when you are in Playa can you decently hear it. Yet lower powered Radio Faycan booms in some days..

re Paul. Yes, dawn is the ideal time, its only getting up is the problem...!!!

Once again thanks all for the help

Oh yes - Radio Faycan 104.2 and a station on 107.8, was the easiest catch at Madeira - I have even heard Radio Faycan with RDS at the Algarve Coast 2 years ago - 1200 km. tropo heard with a Sangean ATS-909 with built in telescoic antenna....

Well a little off topic here on the MW group. I will try to send some further logs to the FM-dx group later.

Best 73's

Paul,

this sounds similar when the gas burner in our central heating system ignites.
It lasts 10 sec or so. I never bothered to fix it, since the outdoor antennas
pick up very little. Indoors it is a pain.

At least your noise is mains (50Hz) related and should be fixable by whoever

Hi Paul,

I think that you can test use "phase mixer" (I dont know good term in
english).

You need two antennas: for instance longwire for receiving signal and
MiniWhip for "disturbance"!

http://krysatec.benghi.org/phprs/images/200812271542_fazclanek.jpg

I can send you more information about it.

From: Dermott Young
Topic: 2432 Message: 2435

I wish you the best of luck as well Paul. Dont want to bring you down but when I reported interference on MW to OFCOM last year, I received a call from a rather patronising engineer who told me that they no longer investigate reports of interference on MW. His attitude was somewhat Like "who in their right minds listens to MW?"

Having said that, if you push them, I think that you will get some joy.

I can also see the Conservative abolishing OFCOM. Having said that, they will probably replace it with a body more to their liking, which will regulate even more lightly than OFCOM does, but at least something will be in place, however toothless it may be.

2436. Quick response from Ofcom to my own problem

Yahoo group: skywavesmw
Date: 2010-04-15 14:05:24 UTC
From: John Faulkner
Topic: 2436 Message: 2436

Not wishing to steal the limelight from Paul's problems, but I thought I ought to keep you all informed regarding the progress to my own complaint to Ofcom, submitted yesterday afternoon.

Less than 24 hours after reporting my problem, via Ofcom's online complaints form, I received a phone call from them.

My problem concerns breakthrough from a paging transmitter, less than half a mile away, which can be heard across the entire VHF spectrum. I have had this for many years but the problems it causes to the broadcast FM band are minimal. When driving past the transmitter, the FM broadcast band is completely wiped out if the pager is transmitting. My problems are that, since I have had a colinear installed on the roof, I am receiving S9 breakthrough across the entire 2m band.

The engineer from Ofcom explained that a test could be carried out on the offending transmitter, on the grounds of spectrum abuse, to see if it has become faulty and is emitting signals well away from its operating frequency. The engineer explained that he wanted me to try another amateur radio transceiver to rule out the problems not being caused in the receiver. After explaining that all the amateurs in this area are suffering from the same problems he still argued that it could be due to the poorer quality designs in modern amateur radio transceivers! (??)

He then advised that the case would be closed unless he heard from me again next week to verify that the problems existed on two transceivers! I reminded him about all the other amateurs in this area having the same problems and also the FM broadcast band suffering. He questioned the quality of my receiving equipment.

Anyway, I will do as he says but I am sure that my FT817 will have exactly the same problems as the IC7000.

The future's bleak. We're all living on a time bomb regarding interference.

John

Hi John,

sounds like you have a good chance of getting that problem sorted. Well done.

As for my own - everything has gone quiet for roughly 24 hours - I'm praying that the problem was something to do with the electric company rather than a faulty appliance somewhere. It would be exceptionally lucky if it was - fingers crossed.

- Paul

Hi Dermot,

This backs up a conversation I had with the operator of pirate station WNKR, who claimed a DTI (as it was at the time) officer had said that MW was no longer a protected service, hence why there is an increase in pirate activities on the band!

The idea of solar "tides" being the result of planetary magnetic fields is relatively new, though there have been discussions going back 30 years or more. I came across this topic earlier this year and after looking at some of the papers I elaborated on early work by a NASA contractor by the name of Vukcevik. From what I was able to construct manually, we may find this as well as the next two solar cycles to be disappointing.

The next two solar minima were indeed forecast to be very low minima, with the maxima only reaching values similar to those of recent minima. There's an interesting discussion about this on QRZ: http://forums.qrz.com/showthread.php?t=252134

Disappointing perhaps to those who anticipate high MUF F2 activity, but VERY good news for MW DXers. I will definitely reactivate my Perseus this coming Autumn if activity stays low.

Some experts predict high activity while others predict low. Hopefully one of them will be correct.

Doesn't look like much of a discussion. Mostly good-ole-boys yukking it up.

Maybe, but there was some sensible stuff in there too. I'll think twice
before posting anything about this next time.

2457. MW FRAME BITS.

Yahoo group: skywavesmw
Date: 2010-07-10 13:22:02 UTC
From: Michael
Topic: 2457 Message: 2457

Hi. In my loft I have some frame bits of a 8 sided loop.

{See photo in photos}

All your need to do is. 1 glue the cross half sections together

2 drill the holes
3 fit a tuning variable.

After running in the wire in the holes, this is very time comsurming, and when I made and sold them the price was £40.00 which where taken up gladly but I am not making them anymore.

When done then you will have a 600 x 600 cm loop {24" x 24"} spider flap frame.

There will be a postage change for sending the wood.

This loop was called THE LIVING ROOM LOOP and was featured in PW of some years ago, if I still have those pages they will be send.

Any enquires please use private email. Glad to be back with you guys. Mike MBR Bungay Suffolf.

2458. Antenna for coming season

Yahoo group: skywavesmw
Date: 2010-07-10 16:08:24 UTC
From: Daviesruby@aol.com
Topic: 2458 Message: 2458

Hi Everyone

Im planning my antenna for the coming season and was wandering if anyone had tried this

_http://www.ok1rr.com/e107_plugins/content/content.php?content.119_ (http://www.ok1rr.com/e107_plugins/content/content.php?content.119)

Im in a bit of a valley so thought it might give me some height. Would it be on par with the Kaz which Im also thinking of.

Any advice or alternatives would be much appreciated. One support would be useful

2459. RE: [skywavesmw] Antenna for coming season

Yahoo group: skywavesmw
Date: 2010-07-10 16:53:35 UTC
From: mvarnhem@planet.nl
Topic: 2458 Message: 2459

Hi Mark,
The antenna is very similar to the KAZ antenna.
For MW and SW reception I am using 6 KAZ antennas (30, 70, 160, 250, 290 and 340 degrees).

When you choose a KAZ for MW, I would suggest :

1.
Ratio Height /bottomwire = 1 : 4
(I use: height: 6 meters; bottomwire about 24 meters; dimensions are NOT critical).

See:
http://home.comcast.net/~markwa1ion/exaol2/kaztests.pdf
http://home.comcast.net/~markwa1ion/exaol2/pennant_v_kaz.htm

2.
Balun: FT114-75 (or FT114-J) Overlapped Winding 11/48
Excellent practical info about baluns on:

http://home.comcast.net/~markwa1ion/exaol2/z_transformers.pdf
<http://home.comcast.net/~markwa1ion/exaol2/z_transformers.pdf>

http://www.dxing.info/equipment/impedance_transformer_bryant2.doc
<http://www.dxing.info/equipment/impedance_transformer_bryant2.doc>

http://www.dxing.info/equipment/impedance_matching_bryant.pdf
<http://www.dxing.info/equipment/impedance_matching_bryant.pdf>

3.
Termination resistor: most articles suggest about 950 ohm , but my experience is that you have to investigate for every KAZ which resistor is best. I find mostly 1500-2000 ohm.
Even better would be a remote control for the resistor.
See: http://www.dxer.ca/file-area/cat_view/87-ultra-light-radio-files-area/97-ulr-antennas
click: Remote termination of antennas

I am very happy with the KAZ antennas. Excellent directional antennas on MW and lower SW bands.
Even on the higher bands these antennas do a great job.
Optional you could do some phasing with two KAZ antennas and a phaser (MFJ1026 modified).
More questions?
Do e-mail me,

Since my main objective from this location in the Northeast USA on medium wave is Europe, some time ago I found plans for a flag. I might be wrong but I think it came from David Hamilton. This antenna is just the correct size for my backyard and it works. It's also cheap to make.

I bought two ten-foot sections of PVC pipe from Home Depot, a large do-it-yourself home improvement chain. I ran 30 feet of wire between the PVC pipes. I dug out two 6" deep holes and fit the pipes into them, then had someone hold the pipe until I could add rope and then pound stakes into the ground for support. So the verticals are ten feet long and both horizontal wires are 30 feet long. The bottom 30 foot segment just sits on the grass. Originally I had it secured a few inches above the ground but the cat kept snapping the wire with her tail and other animals (and possibly humans) did the same thing.

With the flag aimed around 60 degrees, most of the NYC powerhouses are nulled out during the daytime and now, even in July, I can hear Duba 1521khz most evenings on the R75 and SDR-IQ with WWKB 1520 @ 300 miles to the west nulled down by the flag.

For parts all you need is 2 vertical masts, some wire, a resistor or two totaling around 1000 ohms and a torroid. And some coax to run from the torroid to your receiver. It's cheap to build and if you don't like it after you've built it, easy to tear down.

Just a thought.

hi mike .. yes the flag is VERY good on rejecting signals off the back and mine is only a baby compaired to yours ... mine is 2.5m on the verticals and 4m on the horizontals and is corner fed and i use a 48/11 overlapping balun and a variable resistor and its INDOORS and i have received west coast usa ... peru etc etc here in scotland. i made a few tests a while back at my old place and found the flag had a better back null than the ewe and i think other mw dxers have found this as well.

i did an overnight recording this morning and while nothing spectacular was received (100 khz with the pmsdr) i got a nice id from radio havana cuba on 1180 at 04.00z http://www.youtube.com/watch?v=TVT3j6v7vQE it gives me some interest as july has been pretty poor here in scotland for tvdx .. cheers david h

If I can stick in my 2p (about 4 cents?) I can thoroughly recommend the flag. Without this, and the similar ewe version, I wouldn't have had any of the exotic DX I've been having over the last few years.

Looking at the painfully slow increase in solar activity, I would still expect there to be some good DX on the lower frequencies this coming winter. I plan to do a few mini-DXpeditions too, all being well.

Cheers

John

I will be in Hawaii.....

What medium wave DX stations should I listen for from other pacific isles / asian areas ?

I was stationed there 30 years ago and dont remember if Japan, etc can be heard on MW ? I spent to much time on 10 meters.

Thanks, Rick...

Hi Rick

Sounds a very good plan, you should get some New Zealand stations, here is a list http://radiostationworld.com/locations/New_Zealand/nzlrdloc.asp look for Radio New Zealand National (2YA) 567 KHz they are the most powerful here with 50 KW.

others you could look for:

Radio Cook Islands 630 KW

Radio Fiji 1 558 KHz Suva

Radio Fiji 2 774 KHz Suva

KTWG 800 KHz Guam

Solomon Islands 1035 KHz Honiara

A3Z Tonga 1017 KHz Nuku'alofa

Radio Tuvalu 621 KHz (if still on air)

Hope this helps

Paul

You should also hear a good collection of U.S., Canadian & Mexican West Coast stations, basically anything above 5kW, many of which use directional patterns directed out to sea. Among others, KMJ/580, KFI/640, KNBR/680, KDWN/720, KKOH/780, KTRB/860, KNEW/910, KKGN/960, KTNQ/1020 (Spanish), XED/1050, KNX/1070, KFAX/1100, KDIS/1110, KTLK/1150, KSRO/1350, KMRB/1430, KMPC/1540 (Korean) and KMIK & KBLA/1580 should be quite possible; you may also hear inland-DA-to-West biggies such as KKOB/770, KFAQ/1170 and KOKC/1520. References may be accessed via http://www.fcc.gov/mb/audio/amq.html; just follow the prompts. Another regular Hawaii visitor is Tahiti/738, and you may hear some of the stronger SAmer W. Coast outlets, such as Radio Union/880 from Lima, or R. Diego Portales/1180 from Santiago de Chile. Also try 770 & 810 from Colombia, just for giggles. KTWG on Guam is actually on 801; any TWR on 800 proper would be from Bonaire, albeit unlikely. Enjoy! -- GREG HARDISON

Hi

unid Spanish sport station on 1510 khz this morning 0515z to 0540z ; absolutely no trace of WWZN.
Has the zone switched to Spanish ??

Cheers

Pat

WWZN does have some ESPN Desportes programming (Spanish). I'll have to check tonight if they do it after midnight. Very possible.

Hi

Very brief opening at 0730 local time (0530 ut) with HJKY Girardot on 1290 khz.
Identification as "RCN".

Other latin station on 1280 khz but could not catch an ID.
Cheers de Pat

That's an impressive splatter-free recording, Mark!

I don't know who the other station/s might be. Possibly one of several Latin stations which have been heard on there.
There used to be a station in the Caribbean on 1020 too which made it across the pond, not sure if they are still going
though. Turks and Caicos from memory. (?)

I have not erected an aerial for MW this year. Also, some of my usual aerials have come down as we were anticipating a
possible move. Not sure if this is happening now. It probably would not be the best location for TA DX anyway if we
were to move to the east coast.

Good DX!

2484. MW monday

Yahoo group: skywavesmw
Date: 2010-09-20 13:45:35 UTC
From: patrice.privat
Topic: 2484 Message: 2484

Hi

Monday morning

1200 khz : 2 competing stations , one "sports radio" which talks a lot about the COWBOYS.

820 khz Country n western (CHAM ??)

590 khz country (VOCM ??)

Signals are strengthening it seems, expect a beautiful hectometric autumn harvest !

Hi

Definitely stronger signals this morning.

1200 khz unid station over CFGO Toronto playing Frank Sinatra at 0535 UT, could be WAMB but website says they don't operate after sunset.

740 khz CFZM Toronto "Zoomer Radio" playing Otis Redding's Dock of the Bay, confirmed by station's web playlist.

1500 khz "Federal News Radio" ID WFED Maryland, latina station fighting underneath.

670 khz unid English (WSCR ?)

1290 khz unid station playing Moroder's Midnight Express at 0505 UT

1570 khz unid station playing Love Me Tender then into Steve Miller (CKMW Winkler??)

1600 khz unid Spanish (WUNR ?)

cheers de Pat in France

I'm pretty sure it is not Spanish and even more sure it is not a Mexican Station.

I listened to it in Windows Media Player and used the equalizer function with the settings as shown in the screen capture in the link below. It is posted in the Photos section under Kugellager's Images if the link craps out - which I find happens a lot in Yahoo Groups.

http://uk.groups.yahoo.com/group/skywavesmw/photos/album/1882052973/pic/486693012/view

You don't have to use Win Media Player...anything with an equalizer set similarly should make it sound better.

I'm leaning strongly toward French?

The only French language station on 1570 listed on MWlist is CJLV/CFAV in Quebec, CAN at 10kw. CFAV Radio Boomer just changed to CJLV on 2010-07-24.

http://en.wikipedia.org/wiki/CFAV

Good grief - you're absolutely right John, it is indeed French.

I listened again and can clearly hear "Vous ecoutez Radio .... " about two thirds of the way through the recording. I
have no idea how I missed this or what happened to my ears this morning. The "Radio ... " part does not sound like the
new "Radio Laval" (formerly "Radio Boomer"), so I do not know what is being said. Likely CJLV as John says.

Cheers :-[

WWZN is definitely featuring both Spanish and English programming, alternating during late-nighttime hours. English-lang Sports underneath might have been KGA, with an all-Sports format.

2517. Stunning Reception: China > Lincolnshire Coast

Yahoo group: skywavesmw
Date: 2010-10-05 12:31:29 UTC
From: John Faulkner
Topic: 2517 Message: 2517

While over on the east coast yesterday (Skegness) I had a tune around the medium waves on the car radio, using its
standard roof-mounted whip - it's only a small coiled whip at approximately 12 to 15 inches long. It was late afternoon
and I was surprised by the strength of the Saudi Arabian station on 1521.

If that's wasn't enough, the next reception just blew me away - China took over a few minutes later (at 18:00) and
became a very strong, in fact it was a fully-quieting local signal. I have never heard China this strong, even on the
Matlock Forest beverage. I shudder to think what a beverage would be like on the east coast, terminated in the sea.
Don't worry - plans are afoot! :-)

I thought you would have got it strong in the past. 1521 is quite often audible here, so I never really bothered monitoring it, the distance isn't that spectacular anyways with its 500kW. There shouldn't be such a big difference from here to you.

I know China is a regular on 1521, but I have never heard such a strong signal as I did yesterday, and on a car radio
too! Even the far east beverage Tim and I used at Matlock Forest last year never produced a signal from China 1521 as
good as this.

The east coast of the UK should be a superb place for DXing the far east, possibly even Alaska too, in the same way
exotic North American DX is better received on the west coast.

Should our move go ahead I will look forward to some experimentation with beverages along the beach.

Good DX!

That should be interesting indeed. Isn't there a DXer in the Newcastle area?
His log should be an indication of what you can expect.
Is your house right at the coast?

I am not aware of the Newcastle MW DXer but it would be very interesting to hear from them.

The house is exactly 2km (1.24 miles) from the sea.

There is a nice run for a 300m north American beverage at the end of the garden, which could be made longer with extra
coax. This would pass through dense growth and so probably be undisturbed, however, the wire would have to pass
underneath overhead electricity cables which would probably make it unusable.

Hi John

Car radios can give surprising results, I remember one night driving around Christchurch, New Zealand listening to KAIM 870 kHz from Honolulu on the car radio. Sadly they closed down for good a number of years ago.

Some very strong signals have been reported from CRI on 1521, this link will take you to the Hard Core DX archives, have a read towards the bottom of the page http://www.hard-core-dx.com/archive/2008/msg03486.html a direct link to the recording is here http://www.box.net/shared/31gao4fuh2

2529. Long-haul Daytime MW via Groundwave

Yahoo group: skywavesmw
Date: 2010-10-20 23:00:33 UTC
From: toddemslie
Topic: 2529 Message: 2529

When I was recently listening at rural Numeralla, daytime groundwave MW was present out to 1,050 km. This was on a Pioneer IIID car tuner + 2 metre length vertical whip. The signal levels would have been roughly S5 with assuming a loop was used instead of the car whip antenna. These daytime groundwave results are not possible on the Drake R8B + tuned 40" box loop back home in Sydney. The conclusion drawn is that lower ambient noise levels in rural areas enable daytime long-haul MW reception that is not otherwise generally received in city/metro areas. Maximising signal levels is not the objective in metro areas, but minimising ambient noise is. There are limits to how much one can reduce noise in metro areas, but mounting the antenna well away from the house is a good starting point.

Has anyone else on this list tried experimenting with different antenna configurations and using daytime groundwave MW signals as a proxy for the efficiency of the system? The lower MW channels travel up to ~ 1,100 km under daytime conditions, but most DXers in metro areas can't hear them because of QRM noise.

Regards,

Todd

2540. Excellent balun !

Yahoo group: skywavesmw
Date: 2010-11-09 18:07:07 UTC
From: Daviesruby@aol.com
Topic: 2540 Message: 2540

I thought I would put pen to paper to comment on a balun I have received from David Hamilton in Ayrshire.
Firstly when I received it it was clear that it was well made on a 1 ¼ inch ferrite core with 48 turns overlaid with 11. The wires are held in place with plastic ties.
Up to now I have made my own baluns with the primary and secondary turns opposite each other on the core and have used 20 and 5 turns giving a 16:1 ration as required for transforming the impedence of the antenna. I have been using a small flag antenna 10x11ft mounted at ground level with the balun in one bottom corner and a resistor pot in the other. It is pointed at about 320 degrees. This, I was reasonably happy with, pulling in the TA stations and giving some null to the rear.
I have used various sizes of flag and Ewe antennae with similar results.
I connected the balun to the antenna after mounting it in a waterproof box. Tuning to 1008 (Holland) which I use as an indictor as to how the antenna is nulling, I noted that it was infact stronger than was previously received with my old balun ! Tuning through the band this proved to be the case on other frequencies which I use for this purpose.
I returned to the antenna as the lack of null was obviously due to the need for a change in resistance which the new balun required (Hopefully)
After some careful tweeking I managed to null Holland to a level where it was barely audible, this deep null was also consistant over the other frequencies “behind” the antenna. Also later at night Spanish took over 1008, this had not happened before.
Not only were the nulls FAR deeper than the old balun (I did not realise that a balun could do this) it soon became apparent that the signals received from the desired direction were stronger. Again significantly !
I have now added the balun to my newly erected “Super Kaz” and will again make comparisons with my original balun.
David’s balun, is a well made bit of kit which has improved the nulls on my antenna AND increased reception of the wanted signals……excellent
Thanks David

I need some advice.
From my radio room window which is facing I think SSE, the sun is in front of me at 11am {used as a direction indicator} while down the garden is a metal pole up at 15 foot, the distance away is about 35 foot.
Here then is my question with my problem.
I have a drunk of a pest below me that might pull any wire I run from my window to pole - down - as he owns the sky he says.
Part two; I have made the parts for a EWE, but am concerned about how high the wires should be, my window is on the second floor so I am about 12 foot off the ground.
Part 3; Could I have the BALun my end thats the weather tight box on my wall where it could not be reached and any other parts my end as he might dig then up whatever one goe's in the ground as I think one do'se.
Hoping you can understand my problem.
Mind you P Head has had his final Police and Council warning.
Mike MBR.

Thank You David H. Yes I can do that, I have the water tight box with the 9-1 transformer hat I made {my first try} and the other box forgot what that's for, must dig out the paper work in my files.
 I could get one box down as a earth connnection at the far end he should not see that, the pole as I said is about 20 foot tall, I think it should work, as he will need a ladder to reach the main wiring, it will get done once this WX gets better. Mike MBR Bungay Suffolk.

Hello all.

It's nice to try a bit of MW DXing again. Since the current solar cycle continues to grow and throw more disturbances
towards us I decided to abandon MW DXing for the time being. I just considered that this season probably wouldn't
produce anything exotic like the last couple of seasons, could it?

Some of you already know that I have moved. Since moving here I have discovered that the new QTH backs on to open fields
so I thought I really ought to try a beverage and have another bash at MW DXing. I haven't heard anything new so far but
then I have only been listening for three nights. I am pleased with reception of CJVB and WHO however.

Being close to mainland Europe is challenging as the signals are stronger and thus creates more splatter. A few tweaks
on the beverage may improve things further. I am tempted to try a flag aerial again.

I hope to try some far east beverage sessions on the beach in the near future.

Good DX!

John
Skegness, Lincs.
Perseus SDR & 240m (787ft) beverage at 282 degrees.

I had KOMO a few days ago, and also KNX this morning and a few days ago. But
CJVB doesn't make it. They still have the typical beeps, right?

Also CHRQ becomes more regular now

R. Education 1060 is another one.

In the afternoon the carriers of 1500-KHKA (ex KUMU) and 680-KBRW are visible

All with my EWE
Who speaks of a bad season ? :-)

That's good news Jurgen.

Well done on KNX. I recorded this morning again but heard very little. Not surprising with higher K indices though.
Hopefully it will quieten down again soon.

Yes, those three beeps are still penetrating the noise *around* the top of the hour.

Cheers

John

Thanks Jurgen, I had not found that page without your link
Pity about the nulls in their beam, they need about 10dB more for a good service to the many Polish
expatriates in the uk, but it must be a good signal in Romania!

I knew that, because I implemented in StationList a jump to those details for
FM and looked further to see if that would work for MW/SW also, and it did.

Hello

Here is what I get on my TECSUN PL 600 at night time.
MW seems to get very messy where I live after dark.
And is also really active
Will have to also do a day time scan when I get the chance as there is not much light now.

I listened up to 620 KHz.what a mess!

Sounds like interference from several switching mode power supplies, or fluorescent lamps, or other digital thingys. I would try your experiment again with your power mains turned off. If the interference stops, then switch off all the circuit breakers, turn on the main, and turn on the individual circuits one at a time, until the interference returns-then you know which circuit is causing the EMI. If you still get this level of EMI with the main breaker off, it might be good to walk around your home-and the neighborhood-with your radio and see if you can identify the source.

Things may improve if your interference source is mostly from BT Vision type PLT devices. BT are supposed to be changing
all of their 18,000 noisy PLT devices/psus for ones which do not cause interference. Hopefully this will be sooner
rather than later.

I do notice them energy saving bulbs can interfere a bit with the radio.

Which was on at the time.
If I do another one I will turn the lights off.

Also I was filming on an N900 phone which also makes the signal worse when up close to the radio.

Hi Jurgen.
We have a magazine here in the UK called RadioUser and yesterday I had a look at the TV Dx pages from January - September 2010 it would seem Italy with a private station is still on B1 and that Portugal is sill there plus Iceland so there is still hope for some dx, the rest seems to be Iran-Jordan-Dubai-Syria in that part of the world, then we have Ukrainian - Hungary - Belarus, is there any others!

I am re-making my old B1 3 element beam from a on line programme from K7MEM I just put in 57 MHz and it gave a boom of 96" with a gain of 6.531dBd this will just about fit in by loft, so was it worth by making such a antenna.
Also seeing as I made a DAB beam for B3 and is horizotal will it be any good for vertical TV DX it is 4 elements with a CF of 217 MHz.
Mike MBE/R.

From: websitehan
Topic: 2569 Message: 2569

Hello everyone

I would like to inform you that this month free sample of the Benelux DX Club bulletin is:

On mediumwave
seeing you mediumwave group it think this is interesting for you!

you can find it at : www.bdxc.nl

If you enjoy the sample please consider becoming a member of our club!

With kind regards

Han Hardonk

2570. Presumed Alaska on MW

Yahoo group: skywavesmw
Date: 2010-12-06 17:40:06 UTC
From: John Faulkner
Topic: 2570 Message: 2570

At 16:45 English YL heard with low audio level but fair signal. Faded shortly after. Sadly the KBRW web stream is not
working at the moment so I have been unable to check for parallel audio.

It would seem that this can only be KBRW at this time of the day. Greenland was also in at the time on 650 and presumed
Greenland carrier on 700 at the same time.

The flag aerial is pointing exactly NW, thus giving a good window to the north. Alaska is virtually north of here and
therefore has a total sea path.

I still have my overnight recording to check. Fingers crossed for something good.

Good DX!

John

I was seeing their carrier also while working on my antennas, also saw a weak
820 from Alaska. I got surprised to see the strong GRL 650 carrier so early

It's easier to measure the offset to find who it is

> I still have my overnight recording to check. Fingers crossed for something
> good.

This morning Chicago was going strong, also Calgary. The last few days
Vancouver tx like 1130 made it here. But compared to Nov 09 it's all much
lower. Give me back those days please.

The carrier from Greenland on 650 was producing good audio not so long ago (21:00). Looks like we are in for an
excellent night if the indices hold up.

2573. Canada's Northwest Territory on 1230 now?

Yahoo group: skywavesmw
Date: 2010-12-06 22:05:39 UTC
From: John Faulkner
Topic: 2573 Message: 2573

I have been keeping an ear on 1230 this evening due to the presence of a fair strength carrier. At times I have heard
audio which appears to be in parallel with CBC Radio's "North" service. Sadly we had visitors and I never thought to
press the record button on Perseus.

Just now at 22:00 I heard accordion music in parallel with the CBC North web stream but the signal faded just before the
top of the hour. Hearing the CBC News jingle would have nailed this for me but sadly it was not to be.

Could I really have heard CFFB Iqaluit NT on 1230? It seems to have been heard in Scotland several times recently.

John

Yes, last winter I had it and CFLN, Goose Bay, NL,
They have different offsets and made it easy too distinguish

I only heard it mornings with the CBC news jingle
Normally 1230 is crowded with too many tx

This morning, only got from 550-1290, too much too find

The dates tell when I first heard it last season

Lately, 1230 always looks like it should have good levels of audio, but audio is rarely heard.

Of course, over here CFLN will have CBC News on the half hour and CFFB on the hour. I had not realised, so this will
help me differentiate between the two.

I thought I heard a CBC News jingle during the early hours of this morning, at 0200 & 0300, but it was far too weak and
my ears may have been playing tricks. I really would like to nail this one soon.

There are some ridiculously strong TA signals across MW as I type.

Thanks Jurgen.

Ther are several graveyard channels like that. Only the detailed spectrum show
so many carriers that you will understand that no audio is possible. :-)

> Of course, over here CFLN will have CBC News on the half hour and CFFB on the

1420 KTOE Mankato MN. "Live from Buffalo Wildlands(?) in downtown (.....), AM14-20 KTOE" Muffled due to having a
narrow bandwidth to avoid splatter from 1422. Recording available F 0800 07/12 JF
1040 WHO Des Moines IA. Heard again with ID. Difficult in the noise F 0700 07/12 JF

It's a double edged sword situation here. The sea path immediately to the north-through-east here should improve the
chances of DX from west coast North America, Alaska and the far east, but the higher levels of European interference and
general electrical crud make things very difficult.

I will move my flag to the north in due course which will hopefully open me up to all the above possibilities. The flag
aerial has a very wide beamwidth and a good wide null to the rear so this should be ideal.

Good DX!

I use a 2 staggered beverages, that improves F/B about 15-20dB compared to a single beverage. Italy / Spain / South Germany are gone

But last night both wires snapped, because too much ice accumulated due to fog and freezing. Almost 2cm thick. Never had that before. And tonight this weather will continue.

We have unusually severe winter weather here too Jurgen. "Unusual" because of the severity of the low temperatures (down
to -19C in parts of northern England) and because we do not usually experience the colder temperatures until January or
February.

I had a beverage in the field next to the house but it got destroyed by sheep. Several repairs and raising the height of
the wire made no difference as high winds must have removed the wire and the sheep found it once again. I managed two
nights listening on the beverage and the results were impressive.

After the last couple of seasons I feel I have probably heard all I am going to hear regarding North American DX and so
I was not going to bother with MW DXing this season, but because the conditions are still good and the DX potential of
the new location is better than I had expected I decided to give it a try one more time.

My main interests here are going to be with the FM broadcast band and amateur radio.

Cheers

John

I know that listening to all the weather related news on R. Scotland.
We were in the center of the system, little snow and sun, while all areas
around us suffered from bad winter cx. :-)

> I had a beverage in the field next to the house but it got destroyed
> by sheep. Several repairs and raising the height of the wire made no

The first season I had the same problem with strolling deer.
Raising it to 2,25m solved that problem, last winter only one wire snapped.
With sheep it would have been tough, because they would rub on the poles that
would then bend. The wind never posed a problem.

> it once again. I managed two nights listening on the beverage and the
> results were impressive.

I dislike their poor F/B, it is worse than a EWE, so that was the motivation to
find the advantage of both. narrow front lobe and excellent F/B.
One special situation on 207 that DLF dominates. Using the staggered DLF is
gone and Iceland is loud & clear. Never expected that

> After the last couple of seasons I feel I have probably heard all I am going

Hi Brian. I was meaning to say don't expect to much from skywaveschat as most of the posting are mine, these are a bit of a test, I do this on all groups I belong to, too see how helpful the members are, my wanting a Notch Filter built for Band one TV has fallen on blindness or no interest to be helpful at all, in fact 10 mins work from 8 components.
It seems we are at a age of "See this site" a pass on - not that I have had even that responce, it like the posting is not there, other postings have also had zero responce, they say you only get a responce from the input you give "I DON'T BELEIVE IT" Mike MBE/R.

Sounds likely Pat.

Have you checked http://topazdesigns.com/ambc ? This list is very useful and is kept up-to-date.

WLOL are on the "Relevant Radio" network which is classed as "religion" as opposed to the more shouting, ranting
"gospel" format.

Good DX!

They are still brokered, and carry all sorts of px, better check the offset
than listening to the content. Initially I expected non-EE px, but at 0730 they
had EE religious

That's right. I now remember they have always had French/Creole programming when I heard them last year.

It just shows you can't assume anything.

I just checked the band and there are some good North American signals across medium wave as I type!

DXLC forecast says: "The geomagnetic field is expected to be quiet on December 8 and most of December 9. A high speed
stream from CH429 will likely cause quiet to active conditions from late on December 9 until December 12"

The coming overnight session might be the best we get for a few days if this is correct.

John

From: David F
Topic: 2594 Message: 2594

Hi

Have noticed this is back on 1395 AM.
Here is a video of the signal in the day time

http://www.youtube.com/watch?v=QKqLloUmcJg

I am wondering if I would get a better MW signal if I used an external aerial but all the ones on ebay don't look all that great.

2595. A bit of an annoyance

Yahoo group: skywavesmw

From: Mike
Topic: 2595 Message: 2595

Hi All. Being the owner of the Sony Hi Fi tuner - with the BCB MW band on it, I wired in my C.C.Crame dual coil BCB MW antenna - aerial today, it could have been a 40" loop but that's besides the point, my point is the tuning bar indicator on this tuner only stays on for 8 seconds fine for VHF FM as you would beam in a given direction by your rotator, but with a BCB MW loop you need time to turn, tune, and peak the loop or whatever you have, so my question is, how can I get the tuning bars on this tuner to stay on longer, this maybe the case on all such tuners and it is a bit of an annoyance, not the best tool for BCB MW dxing I do have other radios, but at the moment tidying my radio room and noticed this on this tuner. Mike MBE/R.

Hi David F.
Great reception here in Bungay {bungee} Suffolk then again I am close S9+60dB, thing is you only seen to get part of a record WHY, and the format seems to be MOR -Jazz-and 60s pop uck, there giving a Norfolk telephone number, did not write it down as to me the station has little interest and seeing as I shower and not lay in a bath now it's not even bath time radio, there is better out there, even for this OAP from the pirate era. Mike MBE/R.

1230 *CFFB Iqaluit NT*. CBC news jingle. No local ID heard but checked the web streams of CBC Radio 1 St Johns and
CBC Radio1 Iqaluit at 20:07. St Johns were carrying a long operatic piece while Iqaluit had a YL monologue about her
life as a writer. 1230 peaked at 20:07 and the audio I heard was exactly that of the YL. The signal peaked again at
20:29 and I followed a piece of local music on 1230 and CBC Iqaluit while St Johns had a male talk. Another check at
20:32 confirmed this again. *Personal First!* W 2207 11-12 JF

Not so long ago I had given up on any chance of MW DX here because of the move to the east coast - the wrong side for
any kind of North American DX, though I guessed it would be good for DX from the far east, I never expected to hear the
above.

As an experiment I moved my flag aerial to the north. Because of the wide beamwidth of the flag I am also able to
receive good signals from the far east. Strong signals have been noted this afternoon from China, South Korea, Thailand
and India on MW. China on 1521 was peaking at -58dB on the Perseus around 18:00.

Praying for quiet conditions!

Good DX!

I use Steinberg "WaveLab", recording as I play back the ID in Perseus. This records as a wav file by default, but you
can change the settings so it records to an mp3.

The far east is now coming in well on the northerly flag, but not as good as it was around 1800 yesterday evening, so far.

Carriers are already appearing from Greenland on 650 and 700.

You may find it easier to record in WAV, then use the Wavelab accessories to convert the file to mp3; several parameters-settings are available via pulldown. Wavelab's a good program; another good one is GoldWave, out of Newfoundland, with free trial available.

1557 WYFR, Kouhu. "Open Forum" G 1500 14/12 TB/JF

The above log would not have been possible without the help of Tim Bucknall in Congleton, Cheshire.

I made several top-of-the-hour recordings on my Perseus SDR receiver, then I uploaded them to a file-sharing site. Tim,
being vastly more knowledgeable than I regarding far eastern stations, downloaded the files and played them back with
his Perseus software. This was the result.

I have checked all the recordings myself and am amazed at the strengths of some of the signals. I have mostly included
stations with positive IDs for now but there are many frequencies with more than one Chinese or other Oriental station
on them but were only heard with time pips.

Perseus files from the 17th can be downloaded at www.mediafire.co.uk/johnfaulkner

Good DX!

Hi John, excellent logs in your new east coast QTH, I'll add a few hints and tips about several transmitter locations.

> 531 IRIB, unsure which site. YL ID after religious service F 1500 17/12 TB/JF

This stations IRIB Radio Iran (Sarasarye) often //1512 among others, it's from the Azar Sharh tx site in northwestern Iran, this was received in my QTH as well several times //1503, 1512.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=1&kHz=531

> 1107 Xinjiang RGD, site? Kazakh service. Late time signal and interval signal VW 1500 14/12 TB/JF

This comes from Ürümqi/Hutubi, tx site number 631, very close to the directional tx masts used for 1521.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=2&kHz=1107

> 1539 CNR 1, Kashgar. ID and music // 1377, dominant over VOA F 1500 14/12 TB/JF

most likely it's from Golmud (Qinghai) SARFT tx site number 916, a view of this site and many other tx sites is included in the database link.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=2&kHz=1539

2611. Logs N.Germany 6-12 Dec

Yahoo group: skywavesmw
Date: 2010-12-18 14:24:09 UTC
From: Jurgen Bartels
Topic: 2611 Message: 2611

Finally I finished listening to the 6-12 Dec morning recordings
On 10-Dec I recorded also 2200-0000 ut and especially the first hour gave strong signals due to the sunset enhancement. That brought a number of surprises

This late morning I only checked briefly and saw Vancouver active,
1130-CKWX was still audible at 1115 ut when I had to leave.
HRT-1134 was already active that would have ruined CKWX on a single beverage,
my staggered beverages killed HRT effectively

Nice log Jurgen.

Nothing like that here overnight. I struggled to hear the more regular North American stations. I had expected better
since the far east was quite good yesterday afternoon. It's even better today! Fingers crossed for an improvement
overnight.

John

2613. Alaska Again ...

Yahoo group: skywavesmw
Date: 2010-12-18 19:35:22 UTC
From: John Faulkner
Topic: 2613 Message: 2613

850 KICY Nome AK. Tentative/presumed. Two peaks in audio, seemingly in // with KICY?s web stream. I would really like
more audio before I am happy to claim this, but what else could it be at this time? W 1818 18/12 JF

Other carriers are appearing from mid to late afternoon which are home to the more regularly received Alaskan stations
('regularly' as heard in Scandinavia and N Scotland, that is!) including 780 KNOM Nome AK, 820 KCBF Fairbanks AK & 970
KFBX Fairbanks AK.

Good DX!

Hi John, excellent logs in your new east coast QTH, I'll add a few hints and tips about several transmitter locations.

> 531 IRIB, unsure which site. YL ID after religious service F 1500 17/12 TB/JF

This stations IRIB Radio Iran (Sarasarye) often //1512 among others, it's from the Azar Sharh tx site in northwestern Iran, this was received in my QTH as well several times //1503, 1512.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=1&kHz=531

> 1107 Xinjiang RGD, site? Kazakh service. Late time signal and interval signal VW 1500 14/12 TB/JF

This comes from Ürümqi/Hutubi, tx site number 631, very close to the directional tx masts used for 1521.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=2&kHz=1107

> 1539 CNR 1, Kashgar. ID and music // 1377, dominant over VOA F 1500 14/12 TB/JF

most likely it's from Golmud (Qinghai) SARFT tx site number 916, a view of this site and many other tx sites is included in the database link.

http://www.mwlist.org/mwlist_quick_and_easy.php?area=2&kHz=1539

Thanks Björn.

Just caught your post directly from the Yahoo web page. This wasn't forwarded to me for some reason. I really must check all group posts via Yahoo in future as it seems I am missing some.

I will amend my notes accordingly.

Many thanks and good DX.

John

I am struggling to understand why I am not getting the high latitude North American DX you are getting Jurgen. With the
sea path here to Alaska and my reception of NW Territory, KBRW and presumed KICY, etc. I thought my overnight west coast
US/Canada might have been better.

Conditions are more favourable here in the afternoons, producing some excellent DX, then everything drops off for the
overnight period.

Maybe it's a situation where I just need to wait a little longer until a more northerly path opens up for the overnight
period. One thing is for certain, it's a different game here from inland.

Baffled.

West coast mostly dominates late morning here not over night.
1130 wasn't audible early this morning

Still getting Vancouver now (surprise!), 1470 is quite strong,
I have to leave now, too bad ...

Hello Jurgen.

After some thought, it is beginning to make sense.

I was initially thinking that our latitudes are similar and I am only 2km from the sea front. From there I have a
direct sea path to Alaska. Also, theoretically, your North American fadeout times should be earlier than mine as you
are further to the east. (My fadeout was around 09:30 this morning). But then it occurred to me ...

You are using beverages and of course you are phasing them. Beverages are much lower-angle aerials and will therefore
potentially receive over greater distances. When in Scotland those beverages just keep on going long after other
aerials have lost the path. Your path is obviously still open and your beverages are able to take advantage of that
whereas my flag just does not have the same pulling power.

Being on the east coast of England also explains why my fadeouts are much earlier than those of locations west of here.

So, with that in mind, I checked my overnight recording again and noted CJVB on 1470 at 03:00. At the same time KXEL
was blasting through on 1540. Presumed KFAN was underneath WBBR at 04:00 and CJVB 1470 was much weaker. CJVB was
audible again at 06:00 to fair levels. Only WLAM was heard on 1470 thereafter until 08:00.

Good DX!

John

2620. Barcelona/Palau de Plegamans tx low power, or a reserve tx?

Yahoo group: skywavesmw
Date: 2010-12-19 16:28:57 UTC
From: bjorntryba
Topic: 2620 Message: 2620

hi MW DX listeners,

last morning while tuning through the mediumwave band in my home location, on 576 & 738 kHz no signal from the Palau de Plegamans transmitter was received which was quite a suprise to me after never hearing any transmission breaks on a Spanish mediumwave station, according to the El Radioescucha blog it's probably a technical problem, or work on the transmitter is under way.

http://elradioescucha.wordpress.com/2010/12/17/738-khz-rne-radio-1-continuan-los-problemas/

The report further mentions that the transmission power was greatly reduced, only enabling good reception within several km around the transmitter mast. Is the main transmitter currently on air using very low power or is a reserve transmitter in use, are any further details known?

In a Webreceiver in Italy on 738 kHz RNE Radio Nacional is received weak, no signal in Germany at the Moment. Certainly TA DX on 740 kHz is received much better on recent mornings since RNE from the mentioned location on 738 kHz is using a low power reserve transmitter, on 738 kHz the very low power BBC Radio Hereford & Worcester station is often received with a fair signal without any QRM in my QTH. Likewise on 576 kHz SWR Cont.Ra is often "all alone" without any QRM (otherwise RNE R.5 TN would be received in a at least equal signal level later in at night).

73, Björn Tryba (AMLIST & FMLIST database editor)

Hello John,

> going long after other aerials have lost the path. Your path is
> obviously still open and your beverages are able to take advantage of
> that whereas my flag just does not have the same pulling power.

My EWE delivers basicly the same level provided no europeans are nearby.
Currently I can't switch that easily because the 'phaser' is connected here.
But I will compare against the EWE during noon the next time.
I think it's not the antenna but merely the path that does it all.
Your path is a bit unfortunate since it has to cross land at your side.
From here Iceland is the 1st land mass

The staggered beverages don't increase signal levels, but just improve F/B
However 1470 is pretty clean anyways during the day

I just came back and still saw a CJVB carrier, that just peaked and delivered
audio. Never ever heard it at this time

> Being on the east coast of England also explains why my fadeouts are much
> earlier than those of locations west of here.

It is only the last few days that Vancouver opened up, last year it was already
in November and I was already wondering
Often the east coast is pretty poor in the morning when the west coast opens
later on, initially I was fooled by that and stopped too early.
This morning was similar WKBW-1520 was quite weak (thank god) and tent. KOKC
came in stronger

> So, with that in mind, I checked my overnight recording again and noted CJVB
> on 1470 at 03:00. At the same time KXEL
> was blasting through on 1540. Presumed KFAN was underneath WBBR at 04:00 and

Same here with KFAN, I'ver heard it already a few times while waiting for CKWX
KXEL is here most of the time this season.

Alaska is weaker this season too, 680 sometimes delivers audio, but no wonder I
suffer bad splatter from 675 HOL & NOR, the other channels never made it to
audio, 820 used to the most promising.

But a single beverage alone has more gain than the small flag aerial. Consider the amounts of wire used on each.
Perhaps I ought to look at increasing the sides of the flag to increase the gain, but I suspect conditions will
deteriorate a little once we leave the December/January period. February has never been a great month for DX and while
March can be good, it never quite matches up to the conditions of the Autumnal equinox. My far east window will
probably diminish in a few weeks.

Nice recording of CKWX. I have still yet to bag this.

Thanks Jurgen and good DX.

I meant the path to Vancouver. Your path to Alaska is excellent

> But a single beverage alone has more gain than the small flag aerial.
> Consider the amounts of wire used on each.

Sorry I forgot, my EWE is 30x8m
I once tried the 3x8m EWE and that is good for 120m but not for MW, levels
dropped quite a bit below 1MHz, so I took it down
I suspect a small flag is similar

> once we leave the December/January period. February has never been a
> great month for DX and while March can be good, it never quite matches

You never know. From mid Jan 2010 all went down and I never got what I heard
from mid Nov to late Dec 2009
Actually we should have bad MW and good F2 by now, but you can't even rely on
the sun anymore. I only hope it will rise tomorrow ...

> :-) Same here

Ah we've got something in common. :-)

2629. The Midwinter Anomaly Sets In

Yahoo group: skywavesmw
Date: 2010-12-22 00:31:38 UTC
From: John Faulkner
Topic: 2629 Message: 2629

I think there is a severe case of the old Midwinter Anomaly here in Skegness. Despite quiet conditions, the DX has been
very subdued. Is anybody else experiencing this?

Overnight, I only heard 730 CKAC, 880 WCBS, 1010 WINS, 1130 WBBR, 1510 WWZN and 1520 WWKB. They all struggled and even
their carriers were gone by 09:00 this morning.

The far east has also gone quiet with little more than CRI 1521 being audible.

Good DX!

John

2631. Philippines on 1170 This Afternoon

Yahoo group: skywavesmw
Date: 2010-12-22 23:55:41 UTC
From: John Faulkner
Topic: 2631 Message: 2631

I may have spoken too soon about the conditions. I was surprised to hear the Philippines at this strength at 17:00 this
afternoon. 17:00 showed a big improvement whereas everything up to this time was relatively poor.

http://www.skywaves.info/mw/1170-VOA-Poro-1700-22-12-10-(JF).mp3

Although no actual IDs were heard, a few other frequencies had that distinctive time signal as used by South Korea and
Japan, again at 17:00. If only each country had their own unique signal. Frequencies were:

558
567
612 - NHK 1, Fukuoka?
657 - more likely KBS 1, Chuncheon
711 - more likely KBS 1, Sorae
864
891
981 - more likely KBS Yeoncheon
927
972 - more likely KBS 1, Dangjin
1440 JOWF, Sapporo?

Here's hoping for better conditions in the days ahead.

Good DX!

John

2636. Best Place for MW Signal?

Yahoo group: skywavesmw
Date: 2010-12-25 16:05:12 UTC
From: David F
Topic: 2636 Message: 2636

Hi

Just wondering what do you think is the best place for MW DX in The UK?
Also Where would be the best place to DX in Europe and the USA?

And what's you best place to listen to MW stations?
And to get the most stations?

I think being in North Essex is quite a good place.

2637. Re: [skywavesmw] Best Place for MW Signal?

In the US, I would say the Pacific Northwest (WA, OR) for Asia, NZ, Australia. For Europe/Africa I would say the Northeastern US, specifically MA (Cape Cod and north of Boston). In both cases, in areas that are close to the coast with directional antennas to help eliminate splatter and IBOC hiss from the 50kw blowtorches (and even some 5kw stations).

Thanks

For US DX in the UK I think any where on the west coast would be good.
Where I am I have never picked up any US stations but then all I have is just a Tecsun PL 600 and I have never tried this after 3AM which I heard is the best time for US DX in the UK.

I love DXing the Americas. No question about the best place in the UK for this - as far north or west as you possibly
can. A sea path is perfect. Even as far south-west as Cornwall has been known to produce good results.

For me, sadly, the worst place for transatlantic DX is probably where I am now - the east coast. General North American
DX can be difficult with earlier fade-out times than the rest of the country. But as you may have read in my recent
posts, there is a big bonus here by having a sea path to the north, ref. my Alaskan and Canadian North-West Territories
reception this month. It looks like the problem here is that I need VERY good, settled conditions to be able to take
advantage of this northerly DX.

The far east has also been exceptionally good from here but there has been a disappointing lull over the last week,
despite quiet conditions.

Generally speaking, having a coastal location is best, for whichever direction you face looking out to sea. Try
checking for the far east David with a flag aerial pointing north-east.

Having lived in the Midlands, I can say it gives you a 'jack of all trades' situation: In theory you can receive equally
well in all directions, but never 'exceptionally' well.

Hope my small change is of use David.

Happy Christmas!

1270 WXYT Detroit MI. *Presumed*. Sporting News Flash jingle but no local ID F 0800 27/12
JF

Yesterday afternoon's Perseus recordings revealed better conditions. Possible Japanese stations were heard but only
with the time pips and no IDs. They have not been entered into the logbook due to no ID.

A summary:

612 Fair pips heard in Euro mess. Possibly NHK 1, Fukuoka
891 Japan or South Korean time pips
972 KBS Dangjin. Presumed. Poor pips behind Germany
891 Japan or South Korean time pips
1170 KBS World, Gimhe. Fair in Euro splash
1224 Japan or South Korea
1278 Time pips. V poor. JOFR Fukuoka. Presumed. (Heard at Matlock Forest last season)
1296 V poor with time pips in pile up. Presumed NHK 1, Matsue.

Good DX!

Jerry,
No need to get exactly 75 or J
Use 77 and you're fine, the difference is minor and plays no role.
I use them all over the place

FT114 is quite big (diameter) I use FT50-77

Hello all and thank you for reading my post.

These gentleman were very instrumental introducing me to MW/LW DX'ing 30-35 yrs ago.

We worked on my Hammurland HQ-180A (which I still own). What a 'HOT" MW DX'ing machine.

Does anybody know the whereabouts of these two DX'ers?

It would be greatly appreciated!

2647. NDR-972 can be used for calibration

Yahoo group: skywavesmw
Date: 2011-01-13 11:04:14 UTC
From: Jurgen Bartels
Topic: 2647 Message: 2647
Attachments: 1 described; binary payloads are missing from this source WARC

I asked the NDR engineers about the stability of its 972 kHz tx and if it is useable as a reference for calibration.

Their answer in short: Yes, it is controlled by a high precision reference

So far I used 810 Scotland, but on my NE antenna 810 is sometimes dominated by Russia, so I better use a nearer tx for calibration

----- original reply---
Sehr geehrter Herr Bartels,

der Mittelwellensender Hamburg auf 972 kHz wird von einer hochgenauen Referenz gesteuert und eignet sich somit als "Frequenznormal". Das wird beispielsweise auch von Uni Harburg genutzt, die damit einen 10 MHz Quarz synchronisieren. Ich hoffe, Ihnen mit dieser Information geholfen zu haben.

Mit freundlichen Grüßen

Yahoo group: skywavesmw
Date: 2011-01-21 13:33:29 UTC
From: g1mxp
Topic: 2653 Message: 2653

Hi all from Banjul where its 30 degrees centigrade today and sunny

Only 2 stations can be heard during daylight hours
648 Radio Gambia, Bonto site
747 Radio Gambia, Basse site

Starts getting dark just before 7 pm and stations can be heard during the evening from

603 weak French, hoping its Vision Guinea from Kankan. Will keep a watch
621 RNE Tenerife at fair strength
648 GRTS, Bonto, excellent
711 Morocco, El Aioun, fair
747 GRTS, Basse, excellent
783 Mauretanie, Nouakchott at good strength
936 Morocco, Agadir weak
954 unid in noise level
1179 Radio Club de Tenerife, weak
1152 unid in noise level
1224 weak Spanish
1295 Vision Guinea, Conakry, poor.
1314 unid in noise level

It's a pity it does not get dark till 7ish as Ougadougou, Burkino Faso on 747 should be heard here. But GRTS blocks 747. GRTS are off air from 2pm-5pm and if it had been dark earlier its more than likely Ougadougou would be receivable
Not a very good showing above but the ICF SW1 is poor on MW and just has a small ferrite antenna. A wire attached to the telescopic whip makes a slight difference but not much. Will have to work something out later. Going up river so leaving it till I get back.

Hi Mauno

954 and 1152 and 1224 seem to be in Spanish. I am keeping watch on them
1314 in Arabic around 2230, presuming this is the BBC relay Al Dhabbaya (1MW). Heard them from Gran Canary last year, no idents hrd but guess it is them.
The 1295 freq was correct (according to EMWG) and not typo error. This was a presumed logging (hrd in French, only French station I know of on this freq), have tried later but just noise level heard.
1566 TWR Benin comes in quite weak, around 8pm, surprising considering its 600kw. Closes before 11pm
Am only using a SONY ICF SW1 which just has a small ferrite for antenna so not expecting too much. Mainly Dx on FM.

Going up river this afternoon (as well as dodging mozzies) leaving it till I get back.

Hi Ed,
BBC via UAE has been off for some years, but since January R. Farda has been relayed via it. It is in Farsi.

So you heard a big 1000 Hz het whistle, when listening to Guinea? You are right, there aren't other chances of hearing French on that frequency. Hopefully you catch a definite ID.

TWR Benin is 100 kW, not 600.

Thanks and 73, Mauno

Good evening,

Since yesterday many other OMs and I can receive a test tone on 558 kHz. It seems to come from Monte Ceneri, but it's not 100 % sure.

Good dx,

Matthias, S/W Germany

Probably WHKT, now under new ownership, thus eliminating the Disney garbage.

Hello Mike,

it seems Voice of Russia is testing this Frequency. Last November they declared interest of a mediumwave frequency in Switzerland.

The Signal comes defintive from Monte Ceneri.

Good DX

Matthias, S/W Germany

Yes Mark not sure where the transmitter is but it will be off the internet. Continuing ABC internet coverage for various stations combined via 612 ABC Radio Brisbane at

http://www.abc.net.au/farnorth/programs/howtolisten.htm?ref=nav

Many areas have lost power with loss of local radio signals, and possibly the internet, later.

Also flash flood warnings.

Its awful.

2678. Sad loss of a Skywaves member

Yahoo group: skywavesmw
Date: 2011-02-04 16:47:32 UTC
From: Julian Hardstone
Topic: 2678 Message: 2678

I have just heard of the death of Skywaves TV-FM and MW member David Towers from Glenfield, Leicestershire following a period of poor health.

I understand that he had been a Trade Union Representative in his former work, and was proud to have
helped to resolve problems and conflicts at work. He was also one of the Moderators for the SkywavesDX Group and his contribution to the Skywaves Groups will be sadly missed. He was a member
of the UK Six Metre Group
http://uksmg.org/news.php where UKSMG members may leave their condolences, and he was owner of the
Yahoo Frequency Selective Level Meters Group (among others?). He had mentioned to me last year that
his health was poor, with failing eyesight, and that he recently underwent heart surgery.

I am sure I can speak for the whole Group in expressing our regrets and offering our condolences to
his family.

- Julian

2679. Medium wave tests from the US

Yahoo group: skywavesmw
Date: 2011-02-05 19:18:57 UTC
From: Julian Hardstone
Topic: 2679 Message: 2679

"If you are an SWL or an amateur with a good medium wave receiver, on Saturday 12 February at 0700
and 0800UTC, radio station KHMO on 1070kHz in Missouri will conduct a DX test for SWLs worldwide.
The test will be with Morse code, sweep tones and voice announcements. Transmissions will be made
for five minutes at 0700 at 5kW into the station's three-tower, day antenna pattern. At 0800 they
will transit the same material at 1kW using the six-tower, night time pattern. Then from 0900 to
1000UTC, WLIQ on 1530kHz in Illinois will conduct a DX test of its own. WLIQ will test for twenty
minutes using Morse code, sweep tones, voice announcement, special music, sound bites and the like
at its 1.4kW, non-directional, day power. Then WLIQ will test for twenty minutes at 290W
non-directional, critical hours power. Finally, for the last twenty minutes of the hour, they will
test at 3W, non-directional, night power. If you would like to receive a QSL you can send a written
report, or a cassette or CD to the Chief Engineer of these stations by following the rules and
sending reports to Gary Glaenzer, c/o the name of the station whose DX test your are reporting, 325
East Douglas Avenue, Jacksonville, Illinois 62650. For more information, type KHMO February DX tests
into your favourite search engine."

COMMENTS ABOUT DX-NIGHTS BOC-22 :
RECEPTION ON MW RESULTED VERY MUCH PERTURBATED BY STORMS WHICH EFFECTED THE AREA OF BALEARES/SARDEGNA/CORSE MEDITERRANEAN SEA.

NATURALLY WE WILL BE PLEASED TO RECEIVE YOUR COMMENTS, SUGGESTIONS, CORRECTIONS. PLEASE SEND ALL THEM TO : info@...

NATURALMENTE NOS COMPLACERIA RECIBIR VUESTROS COMENTARIOS, OPINIONES, CIRRECCIONES.
POR FAVOR ENVIALOS DIRECTAMENTE POR CORREO ELECTRONICO : info@...

REFERENCE SOURCE FOR MW : www.emwg.info
www.hermanboel.eu/emwg/online-mw1.htm
www.hermanboel.eu/emwg/online-mw2.htm
www.dxsignal.ru/read/mw_eng_a09.htm
www.asiawaves.net/index.htm#FreqTab

JUST A SHORT COMMENTARY ..... QUIET POOR CONDITIONS ON MEDIUM & SHORT WAVE, THIS TIME NO GEOMAGNETIC ACTIVITY AT ALL. WEATHER HAS BEEN PERTURBATED THE FIRST 3 DAYS ALL ALONG THE TOSCANA SOUTH COAST, SARDEGNA & CORSICA AREAS, LUCKLY GOING TO SOUTH EAST DIRECTION. SO THE LAST 3 DAYS OF BOC22 RESULTED MORE SUNNY AND WITH LESS STORM NOISE ON SW & MW BANDS. THE VERY LOW PRESSION DID NOT PERMITTED TO HAVE FM CONDITIONS FOR TROPO, SO WE HAD NO CHANCHES TO TRY USUAL FM SESSION OVER THE LERICI LA SERRA HILL...HOPE NEXT BOC23 IN MARCH WILL BE BETTER.

NATURALLY WE WILL BE PLEASED TO RECEIVE YOUR COMMENTARIES, SUGGESTIONS, CORRECTIONS.
PLEASE SEND ALL THEM TO : info@...

NATURALMENTE NOS COMPLACERIA RECIBIR VUESTROS COMENTARIOS, OPINIONES, CORRECCIONES.
POR FAVOR ENVIALOS DIRECTAMENTE POR CORREO ELECTRONICO : info@...

THAT'S ALL FOLKS !!!!!

WISHING TO YOU GOOD DXs TILL NEXT BOC23 MEETING COMING SOON or LATER ON.....!!!!

DARIO (DM) & GIAMPIERO (GIB)

Hello All,
I am new here. I am bit of novice when finding new radio stations on the AM wavelength (MW/LW). My favourite season is winter when it get dark at 16.00 GMT (4.00Pm GMT) and I can find most MW channels quite clearly. I listen to the following channels

19.00 - 23.00 (7.00Pm-11.00Pm) 1440 Am radio 86 (22.00Pm (10.00Pm)CRI China Radio International

23.00-00.00 (11.00Pm-12 Midnight)1377 Radio bleue

I have picked up these channels on my new Roberts R9914 portable radio. I have also picked up some interesting channels on the shortwave.

Welcome to the MW hobby!

You're fortunate to be in Europe, which is a great location for worldwide DX.
I wonder what you are using for an antenna, in a hobby where loop antennas are a great way to null out unwanted interference.

Best Regard!
Pete Miller

Hello all,
I am using the standard built in AM (MW/LW) antenna in my roberts r9914 portable shortwave radio. I seeking some channels on MW and I received the voice or russia (1323 MW), croation radio (1134 MW) and another channel on (1179MW I don't think it was radio sweden as that radio station is now interweb only).

2687. Ultralight Sony ICF-S22

Yahoo group: skywavesmw
Date: 2011-03-06 21:20:02 UTC
From: dave_hackwell
Topic: 2687 Message: 2687

Picked up the Sony ICF-S22 this weekend to try my hand at ultralight dxing? (Ultralight seems to be a North American classification, although I like the idea)

Sony ICF-S22 is less than a tenner (from M&S of all places) and I've been impressed.

Just listening to Vatican Radios English broadcast on 1530Khz. OK an easy catch but 1654km in the first weekend ..... Watch this space.

Dave

Hi Pat,

Good catch to hear an Iranian, I presume you identified the language since UAE - BBC World Service/Radio Farda, Al Dhabbaya (1000) is listed on 1314.

BBC WS: 0030-0100 Dari, 0100-0130 Pashto, 0130-0200 Dari, 0200-0230 Pashto, 0230-0430 Farsi, 0430-0630 Arabic, 0930-1030 (Su-Th) Dari, 0930-1130 (Fr) Farsi, 1300-1400 English; Radio Farda: 1400-2400 Farsi;

Does this schedule fit with the language heard ?

Dave

From: Mike
Topic: 2694 Message: 2694

17 minute video just uploaded by Jonathan Marks shot at Orfordness in 2003 where he interviews and is shown round by engineer Andy Matheson.

There are also references to Crowborough where Andy worked and the Aspidistra transmitter, parts of which are preserved at Orfordness.

Andy also mentions the 50kw transmitter, originally intended for the Mi Amigo which instead went at short notice to Bechuanaland during the Rhodesia crisis, then to Crowborough, later used at Canewdon to jam RNI, taken back to Crowborough and ended up at Orfordness.

Entitled Tribute to BBC 648 kHz Orfordness - The Geeks Version it goes into some detail about the antennas and transmitters used.

2695. optimal EWE

Yahoo group: skywavesmw
Date: 2011-03-15 23:04:46 UTC
From: Jurgen Bartels
Topic: 2695 Message: 2695

In order to better understand my staggered beverages I learned to use 4nec2 a free simulator similar to eznec, but *much* better

Just out of fun I modified the model to an EWE in order to see what my EWE produces, especially its F/B

4nec2 has an optimizer built in and I used that to find the best F/B performance by letting it adjust length, height and termination R

These are found for best F/B (for 1.1 MHz)

898R 19,7 x 4,4m = 54dB
840R 21,18 x 5,18m = 68dB
850R 20,89 x 5,0m = 65,4dB

These max values are only valid for a tiny area of the rear. A broader F/B can be achieved by using another EWE with a stagger distance of 20..30m

Because of the underlying NEC2 engine near ground simulations are not that precise, you have to consider the results as rough estimations. Also there is a difference to the real world antenna environment.
Anyhow this gives an indication what dimensions you should start with.

So I found that the F/B of my 30x4m EWE isn't that great, and that matches what I see in reality. Unfortunately the trees dictate te size as cattle run under the EWE in summer

4nec2 is a great tool to examine antennas. It needs a bit of learning, there are a few good tutorials around for that. But then the real fun starts.
See my results of the staggered bev. (not yet entirely finished)

2696. EWE Antenna & FT450

Yahoo group: skywavesmw
Date: 2011-03-21 16:47:33 UTC
From: pmbwakefield
Topic: 2696 Message: 2696

Hi,

I'm Paul and been into FM DXing for some years now, infact got a Triax FM5 on a rotator, a Sony ST-SB920 modified tuner, and also a radio amateur. Now however I'm intrigued by the prospect of AM DX, and I can't believe I've let it pass me by for this long...
Anyway to cut a long story short, I today put up a EWE antenna, and am looking forward to using it tonight to see how it performs, does it really matter how high it is, and it's length because I just fit it in my garden, it's around 18ft high at one point and maybe 14ft the other side, and I've guestimated around 45ft long, I'm only using 1 ground rod at each end because the soil is really tough and I'm a wuss lol
Does this sound ok to you ?
Also, I don't have a dedicated AM radio, I was thinking I could use the Sony ST-SB920 but this is probably far from ideal, I also have a Yaesu FT450, and I have a CAT cable to allow connection to a PC, I was wondering if I could perhaps use this and another computer program to control the radio ? Just a few thoughts, tell me yours.

Nice to meet you all... Paul.

Hi Paul and welcome here

> Anyway to cut a long story short, I today put up a EWE antenna, and am looking
> forward to using it tonight to see how it performs, does it really matter how
> high it is, and it's length because I just fit it in my garden, it's around

A few days ago I simulated EWE's and looked for the dimensions giving the best
F/B ratio

These are found for best F/B (for 1.1 MHz)

898R 19,7 x 4,4m = 54dB
840R 21,18 x 5,18m = 68dB
850R 20,89 x 5,0m = 65,4dB

These max values are only valid for a tiny area of the rear. A broader F/B
can be achieved by using another EWE with a stagger distance of 20..30m

Real dimenions may deviate as this is only a simulation that does not take real
soil too much into consideration.
Also good ground connection is needed, in dry areas that might be difficult

I have a 30x4m EWE and noticed that its F/B isn't too great, so the simulation
seems to be close

> ST-SB920 but this is probably far from ideal, I also have a Yaesu FT450, and I

> perhaps use this and another computer program to control the radio ? Just a

Make sure you do not takes PC noise back to the antenna via its feed cable.

Hi, just another quick question... i've used a 9:1 UNUN at the base of my EWE antenna (as I had one lying around) will this work, because I'm not having much luck with it at the moment...
Also for the resistor I just bought a 920 Ohm resistor from Maplins and am using that, does that sound right?

Thanks.
Paul.

That's too unspecific
You need a 3:1 transformer that works for MW
For a FT50-77 torroid use 11:33 turns

> Also for the resistor I just bought a 920 Ohm resistor from Maplins and am
> using that, does that sound right?

You have to try out what resistor you need.
Tune to a tx that sits in the rear, then use a variable 1k resistor and adjust
it so that the tx gets weak. Then use a fixed resistor with the same value

During the last mornings cx were quite good. Low level TA but even lower for European splatter, so audio quality is very pleasant. And very little noise.
Signals are from east coast to midwest and Mexico
I surprise was WMOB Mobile AL, from its back.
I now use in an preamp to get a bit higher levels in order to reduce the hiss noise of Perseus during these low levels.

The clips of this morning demonstrate my antenna directivities

http://dx.3sdesign.de/temp/774-BBC-Leeds-Kent-on-SW-NW-EWE-antennas-110410.mp3

On the SW 90m beverage BBC-Kent is heard
On the NW 300m beverage BBC-Leeds is heard
In the middle and at the end the EWE is used. Then you hear a mix of Leeds and Kent.
The beverages bring in just one each.
The EWE front lobe is simply too wide

http://dx.3sdesign.de/temp/1458-BBC-Newcastle-Sunrise-Radio-on-NW-SW-EWE-antennas-110410.mp3

This clip of 1485 kHz starts with BBC-Newcastle 2 kW, on the NW Beverage.
When switching to SW, Sunrise Radio, Brookmans Park 125 kW dominates,
The same on the EWE, simply because Sunrise uses so much power
At the end back to the NW beverage

2706. EWE with wideband F/B

Yahoo group: skywavesmw
Date: 2011-04-15 20:30:27 UTC
From: Jurgen Bartels
Topic: 2706 Message: 2706

As we all know, termination R of EWE and similars are frequency dependend, you need to individually tweak it for every channel to get the best F/B.
Not good for wideband recordings and quite annoying during live sessions.
Also F/B is often not optimal for the size of EWE you have, you can get better F/B with the same sized EWE just by using a different kind of termination

If you replace the termination-R with the new "JB"-terminator, then you improve F/B and get F/B optimized across the entire MW-band, without the need to adjust anything anymore. Vactrol's etc. can now be thrown away.
Wideband recordings enjoy now the best F/B for every channel.

However some DXer's sweat is required:
Each JB-terminator has to be individually adjusted to your antenna, and requires some careful work on your side.

1. Pick a number of stations located at the back of the EWE that are distributed accros the entire MW band.

2. Use a 2k variable resistor connected in series with a variable inductor (5..130uH) that replaces the old EWE termination resistor

3. for each station adjust R and L to get the very best F/B
Measure R & L and write these values down

Once you've got the values for all these channels they are entered into a program that calculates the component values for the JB-terminator, that in my case is a R-L-C network. This JB-terminator then replaces the old termination resistor.
After measuring the R-L values on several channels during the last few days, I today installed the resulting JB-terminator and it now shows the best achieveable F/B over the entire band.
But: It all depends how carefully you determined the values in step-2

A big thank you goes to Christoph Mayer who developed the method for finding the JB-terminator component values and structures for the measured R,L values

So it may not be the simple plug-n-play part that you'ld expected, but for the experienced DXer this is a doable solution and worth all the initial efford

That's super, J?rgen. What does your R-L-C network look like? I expect it would be quite different
for a different EWE (different dimensions, different ground conductivity). I will put up a new EWE
to try this

When you have optimised your EWE for F/B ratio, do you notice any change between daytime and
nightime optimisation, or maybe dusk and dawn condx?

Also, congratulations on the impressive directivity of your Bev farm, which allows you to choose
between tx only 30? apart

Yes it will be different from ant. to ant.
You first need to find the R & L or C termination for several channels, and then from these values find the RLC network that shows the same impedance at the measured frequencies
In my case

```
o-+---2200R---+----192uH---o
+---79pF-----+
```

Above 1300kHz this one becomes insufficient, the reactive values deviates too much from the measurements. So the network will need more parts

The good thing of this approach, you can get out the max. that *your* antenna allows without altering its size

> When you have optimised your EWE for F/B ratio, do you notice any
> change between daytime and nightime optimisation, or maybe dusk and
> dawn condx?

Sometimes yes, sometimes no at midnight,
dusk & dawn are good

> Also, congratulations on the impressive directivity of your Bev farm,
> which allows you to choose between tx only 30° apart

Thanks. However the long beverages have been taken down as the land is needed now. So I am back to EWE and the 90m ant.

From: Julian Hardstone
Topic: 2713 Message: 2713

While it's quiet on the bands, you might like to take a look at a website devoted to listing radio
airplay charts over the years, primarily AM stations in the USA. Besides the charts, they are
starting an archive of 'airchecks' collectors and their recordings. This could be of interest to
dx-ers, and if you have any old recordings of airchecks or complete programs, you might like to
offer them there.

From: pe1etr
Topic: 2718 Message: 2718

Hi all,

I have relocated to Shenzhen from Chongqing.

In Chongqing, I couldn't get MW very well due mainly to overground powerlines and transformers. Here in Shenzhen I am on the 25th floor (level 26) of a tall tower surrounded by other tall towers, close to large electricity pylons, but MW reception is good from my balcony. I want to get one of the Chinese loop or window active aerials. I'll try and do a bandscan in the meantime. I had a weak station on 162kHz LW on my Sangean ATS-909.

I saw MNG 164kHz on the Asiawaves.net list yesterday. Unfortunately there was nothing on LW last night.

The Sangean is quite good on LW but nothing else is audible.

I don't want to build a large loop as I wont be able to take it with me when I leave + I have nowhere to store it here when not in use, that is why I thought of the Chinsese Degen/Tecsun AN100/AN200 loops or the Kestrel active aerial

Yesterday morning I had a very good video of 1TV on R1 8p
Fortunately it stayed good until local ads were shown, only the 6m hams spoiled
the game, but the audio was still good, giving a tel-no.
With Victors help we found it to be Rostov
The ad with the phone-n was for http://www.doctorgavrilov.ru/rostov/about/

49.760.420 1TV Rostov-na-Donu, 30Hz wide

It was the only signal, that is quite rare. Later replaced by UKR TV

2722. Transatlantic MW loggings, 21/08/2011.

Yahoo group: skywavesmw
Date: 2011-08-21 09:57:51 UTC
From: Martin Payne
Topic: 2722 Message: 2722

Greetings,

I am new to this group, so firstly a hello to everyone!

I have just been reunited with a ~30 cm square loop antenna which I built some years ago, so I decided to give it a test in the early hours of the morning to see if I could pick up any US stations. I am located in London in the UK, and was using the loop antenna with my recently purchased Tecsun PL-606. I listened at around 0130 UTC, with the AM bandwidth on the radio set to 2 KHz.

I didn’t manage any transatlantic reception in-band, but in the extended band I heard the Caribbean Beacon from Anguilla on 1610 KHz. The signal was fair in strength, and the reception was pretty solid. It was a religious broadcast with an American female, and a male gave out the phone number “1800-338-3030”. On 1620 KHz I heard a Spanish language station which I didn’t manage to identify. It was somewhat weaker with some fading, and featured American pop music and Latin American music. Any ideas what this could have been? MWLIST has Radio Rebelde from Cuba listed on this frequency, which I guess is quite possible as it’s down the same way as Anguilla. On 1650 KHz I heard what appeared to be two stations, but as a result neither of them were intelligible so I have no idea what they were.

Interestingly, the loop antenna doesn’t give as much improvement for the Tecsun as it does for other portable radios, but then again, the Tecsun is already a pretty decent radio. It performs best with the radio placed just next to the loop, unlike my other portable radios which perform best when placed inside the loop. Hopefully this is just a taster for what is about to come!

Regards,
Martin

Hi Martin

Welcome, I'm located in Christchurch New Zealand, you may have heard of the place because we've been hitting the news of late because of large earthquakes. We did have a clear frequency 1180 which gave me good reception of Radio Marti in Florida until a station came on air in Auckland on 1179 all I get now is a heterodyne.

As regards the PL 606, if its directional qualities are anything like the PL 310 I had are more acute that the two radios I mentioned above. It may be a case of finding the right angle in relation to the loop to get the best performance.

I have been using a Kaito KA 1103 and a Digitech AR 1747 which is a clone of the RedSun RP-2100. My main radio is a Yaesu FRG 7000 which doesn't look too healthy after being on the floor twice and having a dresser fall on top of it the second time.

Pass band tuning is the way to get the splits something that I am unable to do at the moment but hopefully will be able to fix soon.

Caribbean Beacon has been heard in New Zealand regularly, the best time for us is in the summer which won't be very far away!

Paul

Hi Paul,

Thanks for the welcome. I did indeed see Christchurch in the news, and I was vaguely familiar with it before that. I hope you were safe during the earthquakes.

I've had some transatlantic MW reception once before, back in 2003. That was on a Target HF3 communications receiver with ~20 m of wire down the garden. I picked up a number of stations in the extended AM band from the East coast of America one night, plus one from the Virgin Islands. I started university a few days later which meant I was away from home and had to put my listening on hold. ...and then I moved house and there was no room for an external antenna. Only now have I been able to get back into MW DXing.

The PL-606 has really poor sensitivity on LW—worse than the cheapest of transistor radios. It struggles to receive RTE1 on 252 KHz, it does not pick up Polskie Radio 1 on 225 KHz during the day time, and there is no sign of the "CHT" NDB on 227 KHz. The MW sensitivity is much better, although I think the main advantage of the radio is its selectivity. My old radios had major issues receiving stations up to ~45 KHz either side of a high power semi-local station, but with the Tecsun you can easily receive stations just 9 KHz away from a high power station. In the worst case scenario I have to reduce the AM bandwidth to 3 KHz, which still results in a perfectly listenable signal. It was that which allowed me to pick up the low power Tay AM from Dundee on 1161, despite being directly above the local high power LBC News on 1152 KHz—it's a station I had been trying to pick up for about 12 years!

Do you do any LW DXing from there? You must get some pretty clear frequencies. I'm debating whether to build a loop antenna for LW. It might not be worth it as the band is already full up with high power European stations, and the only real DX is a Russian station on 162 KHz which I can hear during the rare times when France Inter is off air.

Martin

Welcome Martin.

If you are using a loop antenna for MW you will find that most European transmitters are roughly 180 degrees from the
general direction of North America, hence the frequencies will be blocked. I would strongly recommend a flag antenna if
you have the room. They're not that big anyway.

Good DX!

John

After midnight a few LW tx shut down, so on 216kHz R. Rossii Krasnojarsk with
local px can be heard during the winter
Also Mongolia showed up with carriers, but I never got their audio

As for your 1620, that is most likely R. Rebelde using 3 tx
At this time of year you will hear during the early hours tx from South
America, check the upper channels, like 1390, 1400, 1470, 1500, 1510, 1520 and
the x-band

Hi John,

Interesting, I'd never heard of a flag antenna until you mentioned it, but they seem to have some good reviews. I think I'll give it a go. A null in one direction would be handy as I've found some of the US stations are coming from the North West, for example KVNS on 1700. I guess the shortest path to Texas is up and over rather than straight out to the West. Is there any easy way to calculate the direction of a shortest path? I'm currently calculating directions using the arrow on Google Maps on my phone, but this doesn't seem to work out as you go further East or West.

The station on 1620 is indeed Radio Rebelde, and is audible around one in every two mornings. The Caribbean Beacon on 1610 is audible almost every morning. I also picked up a very strong signal from WWZN in Boston MA on 1520 this morning, the first transatlantic logging I've had in-band. At about 0430 UTC, I was getting a strong and fairly solid signal, the only degradation being interference from local stations on 1503.

Regards,
Martin

I have given up trying to understand email formatting. Whatever format I send my emails it will get changed by the
settings of the mail client, software, etc. at some point. I have given up trying to understand it Mark as I simply
want to "send an email" and that's it. Windows Live Mail? Erm, nope. Thunderbird here, and that cocks everything up.

;-)

Hi Everyone

Not a great catch but pleased with the strength of reception and hope you dont mind but I thought I would share it.

750khz CBGY Bonavista NL "CBC Radio one " id

Unfortunately can only get a 10x11ft flag up this year, but having sais that the null is far far better than the super kaz I had up last year ! (unless I was doing something wrong)

hello

I scanned the band this morning, only è channels alive (weakish, but that's the start).
The only really audible being 1520 khz, probably WWKB Buffalo NY
but no ID heard.
The X-band was as empty as a church on a free-beer day.

Cheers

Pat

Mark, thanks for re-posting it. I've seen this happen on SkywavesDX too. Do you know if it's an issue with Y!Groups and HTML email in general, or specifically Windows Live Mail, HTML email, and Y!Groups?

John, I can't really comment on MW propagation in general, as I've been out of the loop (excuse the pun) for some years on the MW DXing front until about a week ago. However, in the last week I've picked up many stations from the UK and Central / North America which I've never heard before, but I suspect this is partly due to advances in technology for cheap portable radios, and the fact that many of the large international broadcasters have switched to internet only in Europe, so there are a lot more clear frequencies--a bit of a shame in some ways, as I used to enjoy programmes such as Radio Netherlands on 1512 via Belgium.

I'd like to find some interesting African and Middle Eastern stations, as well as some Greek pirates in the coming weeks. I just need to work out which frequencies are good.

Regards,
Martin

I need to get the beverage back up in the adjoining field. It didn't survive long last year due to those things called
sheep.

I suppose ought to run out a beverage /across/ the field too for South America while it is empty.

I am hearing China and Saudi Arabia well on 1521 during the evenings on the car radio.

Cheers

John

Interesting finds. I tried 750 and 1520 this morning, but no joy with those--1520 is too close to 1521, which has other stations including one from the UK.

I did receive a few other transatlantic stations this morning at around 0400 UTC. I had the regular Caribbean Beacon on 1610, fairly regular Radio Rebelde on 1620, and a bunch of unid US stations on 1500, 1510, 1620, and 1700. I had a positive ID of a strong and solid Radio Bloomberg on 1130. They only gave the station name, not the callsign, but it appears to be WBBR from New York. I had fair reception of a station on 1650 which mentioned Arizona, the Dan Patrick show, gave the URL http://www.foxsports1650.com/, and had a maximum signal towards the North West, so I think it might have been KBXZ from Flagstaff Arizona.

The stations were logged on my Tecsun PL-606 with a ~30 cm square tuned loop antenna.

"KBXZ" Flagstaff is actually a so-called Part-15 station, unlicensed and similar in coverage to one of the UK's 1-watt Hospital stations. Your catch was probably KCNZ Cedar Falls, Iowa...still not bad at 1000 watts.

True enough but the sheep destroyed my beverage after only two days! The wire was all over the field in short lengths.

Saudi Arabia is the dominant station on 1521 here. China is often heard easily during the winter months, late afternoon
and mid-evening. Programming is usually in Russian. Consider though that I am on the east coast so I have a big
advantage with DX from the far east, whereas transatlantic DX is quite tricky, unless solar activity is very quiet, then
I can point the flag to the north and receive west coast US/Canada, plus KBRW Barrow AK 680 if I am lucky. Otherwise
that beverage is essential for North American DX. I caught some decent conditions last season in the two days it was up.

My Skegness MW log is at: http://www.g1vvp.co.uk/mw-logbook-skegness.html

I have a slightly out of date copy of the WRTH which I browse through and pick out stations which would be interesting to try to receive (mostly local radio stations in the UK). I use MWLIST when I am having a general bandscan and need to put names to frequencies.

I'll have to find a way of recording the audio output of my Tecsun. I could always connect it to the line in on my PC's sound card, but that means actually getting out of bed at crazy o'clock in the morning to do my DXing.

Thanks for the info. I found the station listed as an affiliate on the main Fox Sports Radio web site, and the URL matched up with the one given on air. But if KBXZ is the equivalent of an LPAM, then KCNZ seems the most likely station as I don't see any other affiliates listed on 1650. I'll have a listen out to see if I can hear it again in the coming months.

Conditions this morning seemed rather poor. Even the reliable Caribbean Beacon on 1610 was barely audible. Yesterday morning was good (I listened around 0400 UTC), with the usual suspects plus a nice strong signal from VOCM 590 from St. Johns NF--a first for me. No sign of CJYQ on 930 though.

Hi Martin

Why not get a tape recorder and a mains plug in timer then set the times you want it to swithch on and off. Then just listen to the tape when you like. I then plug the ape recorder into the pc and record the clip I want.

CFRB sounds probable; they've been running Comedy clips overnights. CBR, with some form or another of CBC presentation, would be the only other possibility.

Hello all,

I added an analogue Tecsun R-911 to my portable radio collection last night. I have now got 5 portable radios here. I uploaded a photo of all five, so comparisons with size can be made. The photo is in the main "Files" folder itself.

For those who do not know, The Tecsun R-911 has been proclaimed as a MW nulling champ amongst small portables (Ultralight Radios). It can certainly null some pretty strong sigs here...I'll try and make a comparison between all five radios soon. The pocket-sized Sony SRF-59 (also in the photo) has very similar nulling ability to the Tecsun R-911.

Peter Wilson
Shenzhen, China

Tecsun CR-1000

Pat you had better signals than here.

I also heard briefly the spanish relig. on 1520, offset .998

on 1500 R.Santa Rosa stronger than the last days at 0500z
you hear it with the typical 160Hz hum

at 0530 all was gone

but in general not worth wasting my time scanning the band.
Last spring was much better

Topic: 1031 Message: 2766

I had 1400 Ave Maria at 0517 9 September with good signal strength in London. I am assuming it is Emisora Mariana de Bogota which has "Santo Rosario con el Papa Juan Pablo II" scheduled at this time - http://www.radiomariacol.org/cms/front_content.php?idart=67

I think WIDA is not a Catholic station and so would not have Ave Maria.

regards

Stuart

Yesterday morning at 0730 local Florida & Cuba were quite strong.
1180 was full with many carriers, I think most of them from Cuba tx.
Also 1140 WQBA strong

A new one:
950 WTLN, Orlando (FL) religious

Otherwise Colombia and Mexico (940, 1060), so a very broad range

Hi

X-band open this morning

1650 Hindu hits, normally CINA Mississauga, Ontario, Canada

1660 Fox station, normally WQLR Kalamazoo, Michigan,USA

1700 Rock station playing "Happy Together" by the Turtles (1960's), could be KVNS Brownsville, Texas

also

1520 WWKB Political show "for the patriots by the patriots", silly far-right clown trying to legitimate Troy Davis's execution (puke)

Some stations starting to appear in the 900's (950 unidentified Rock station)

Cheers

2777. Sheigra GPO Station

Yahoo group: skywavesmw
Date: 2011-09-25 10:46:48 UTC
From: John Faulkner
Topic: 2777 Message: 2777

This morning I received an email concerning Sheigra and the old GPO station which used to operate from there. Did it
become a Royal Navy DF station in WW2 ? I have no recollection of this. Perhaps somebody knows more.

Only recently I was thinking about how nice it would be to return to Sheigra / north Scotland for some MW DX. I think a
new location would be necessary these days.

I am still to erect aerials for MW here. To be honest I haven't bothered because of the general increase in solar
activity. I know I should. As an alternative I might string out a beach beverage for far eastern DX.

Thanks and good DX!

John

Further to John's posting earlier, I have uploaded some photographs of the old DF station at Sheigra that I took during the DXpedition of October 2008. The link is:

https://picasaweb.google.com/tonydx2002/Sheigra?authkey=Gv1sRgCP6I-tW4suLpHA#

I seem to remember that Lena Mcleod, who used to own the cottage that the original Sheigra DXpeditions were conducted from, recollected once that it was manned during World War II but I have never been able to find anything more about it.

Best regards

Tony

Topic: 2781 Message: 2781

Hello

The X-band was positively exploding with strong signals this morning; Had I had more time, I would have tested the Ultralight on them but I had to rush to the salt mine.

*1700 khz Yes, KVNS is back with country music and ID's galore, you could not have missed that Brownsville, Texas station even if you had been half-deaf.Gospel station underneath (WEUP Alabama ?)

*1670 khz "Fox Sports 16-70", definitely WPLA Dry Branch, Georgia, booming.

*1690 khz weaker with CBS News, the only CBS station here seems to be WMLB Avondale, Georgia, note that this is coherent with the reception above.

*1650 khz CJRA Radio Shalom, Montreal in French with "L'école des Parents"

*1660 khz Hit radio with Randy Newman's "You're falling in love" and Steely Dan's "Do it Again", I suspect WCNZ, Marco Island, Florida.

Not bad for a 26th of September.

From: Günter Lorenz
Topic: 2786 Message: 2787

Hi Mark,

situation in UK may be different, but here is my 2 pence:

Africa:
1530 VoA from STP and 1431 Radio Sawa from DJI should be possible. Keep an ear on 1088 for Angola, 840 for Chad (not sure if active, there are some NDB here), and 917 for Nigeria. Also, 1296 Sudan is reported occasionally. Unfortunately, 1386 Radio Rurale from GUI is - if active at all - blocked by Spain.
As for the times, alle these should be around in late evening.

If East is Asia, 1566 and 1521 should be a good starting point: 1566 with India and Korea, 1521 with CRI from Urumqui.

Betreff: [skywavesmw] Asia and Africa

Hi Everyone

Im interested in giving the East and Africa a go. Any pointers on some easier ones to look out for and perhaps times. I will be using a none directional delta loop, would there be any merit in making it directional ie a null off the back - NW.

Any help very much appreciated, will give me a chance for some live listening earlier in the eve

Thanks

Mark

Thanks Very much Gunter, late eve would be from 8ut onwards ? Would my non directional loop be ok or do you think I should make it directional. It would only be directional blocking the north/west really.

Thank you VERY much

73's.....Mark

In a message dated 04/10/2011 19:08:49 GMT Daylight Time, glorenz@lorenzsoft.de writes:

Hi Mark,

situation in UK may be different, but here is my 2 pence:

Africa:
1530 VoA from STP and 1431 Radio Sawa from DJI should be possible. Keep an ear on 1088 for Angola, 840 for Chad (not sure if active, there are some NDB here), and 917 for Nigeria. Also, 1296 Sudan is reported occasionally. Unfortunately, 1386 Radio Rurale from GUI is - if active at all - blocked by Spain.
As for the times, alle these should be around in late evening.

If East is Asia, 1566 and 1521 should be a good starting point: 1566 with India and Korea, 1521 with CRI from Urumqui.

2789. BOG antenna

Yahoo group: skywavesmw
Date: 2011-10-06 11:36:55 UTC
From: Ron
Topic: 2789 Message: 2789

Hi all,

My name is Ron and am a member oft the dx-antwerp radio group an also a ham with the call ON2RON and live in a small town 12 km south of Antwerp in Belgium. This is my first post on this group and have some questions about a BOG.

I have used and build many antennas in the past, some for transmitting but mostly for receive. My last good receive results i got with a home brew Flag antenna. Now want to receive TA medium wave broadcast signals and notice the Flag is not ideal. It is pointed to north America but is not pulling in many stations. So back to square one and start with something new. First i was thinking of making a Beverage but i can not put up any supporting poles. The BOG was my next option but i do not know if this antenna produces a good signal. Seems the sensivity for nearby QRM is a good quality tough.

Is there someone who has or had a good experience with the BOG? How do i construct it so it will work as expected. I live in a wooded area with heavy clay ground. If possible i would avoid using a préamplifier. Can i use the same hardware and setup as a Beverage. I suspect i can put out about 250 meters of insulated stainless steel wire without obstructions.

Any info is welcome.

73' Ron

Yes a BOG is the same as a Beverage but lies on the ground.
And therefore it has a lot less signal strength. I once tried it to avoid that deer ripping a beverage apart and . After just one day I was so disapointed that I raised the wire back to 1m height and got a substantial stronger signal, and this is what you need during late mornings when Eu signals get very weak and make many NA signals audible. I have mine at 250cm height so that deer can pass under it without destroying it. This only Nov-May when there are no cattle.
In the meantime I use an EWE and that is quite good and allows cattle to graze underneath it.

Hello Ron and welcome to the group.

Our experiences may differ, but from my own. the flag has always been superior to the ewe and offers deeper, more stable
nulling. I realise a lot of this may have a lot more to do with the matching transformer though.

As for using a BOG: They have always been a step or two up from a flag or ewe. With the beverage on the ground though
I have probably experienced less in the way of gain and directivity, though it is difficult to know how much difference
there is unless you have a BOG and an elevated beverage side-by-side for instant comparison. How many people have tried
this?

My plans for this season are to run out a BOG along the beach or in the adjoining marshes. I don't think there is much
point in me bothering with a flag on the garden given the current increase in solar activity. In any case, the garden
is out of bounds for six weeks or so as we are in the process of laying turf.

If you live in a wooded area, could you rest your beverage two or three metres above the ground on tree branches? I
have done this in the past and the results have been very good indeed.

My process for running out a BOG has always been to use two garden hose reels, one of which contains the wire and the
other contains 50m of RG58 coax. When doing this mobile I NEED to use the coax as my car produces a lot of QRN. I can
simply drive along a quiet rural location running out the beverage from the reels as I drive (very slowly). Coiling in
the BOG is simple with the garden hose reels.

The problem may not be your flag. The problem may just be conditions.

I have a 40' long by 13' tall flag aimed toward Europe (60 degrees or so). Conditions toward Europe have not been good lately. I see a few traces of the more common stations (Absolute 1215 for example), show up around midnight (0400UTC) but not much else. If your flag has only been up a short time, this may be the problem.

In other years TAs would be heard from just before sunset, but not this season.

No John, it is has to with the termination.
Termination and size of EWE are the culprits.
You can get good F/B if your termination matches the size of the EWE, and you cannot use a simple resistor. It has to be a resistor and inductor in series.
And this is different for each channel.
I found this by simulating different sizes and different terminations. And I bet the flag etc behave similar, i.e. the termination is not optimal across the entire MW band.
I use a 30x4m EWE dictated by trees. The F/B was not great when using a simple resistor. I was pleased that F/B improved a *lot* by using R+L in series.
Actually I found the optimum. So I did this for several channels across the band and from these R+L values I calculated a R,L-network that represents the individual values for each channel. So I get wide band F/B optimum for the entire band and don't need to adjust the termination any longer.
I am still amazed that I don't hear signals from the rear after 6 months (I built it in spring). Usually 900-RAI or 801-Bavaria were annoying, now I don't hear them anymore

So you need to find the right termination for each antenna, there's no rule of thumb.

There exists only one EWE-size that delivers max. F/B by using a simple resistor, and that is valid only for one channel

From: Ron
Topic: 2789 Message: 2794

Hi Jurgen, John and Mike,

Thanks for the nice welcome words. I have to start my message with a negative note. I went for a walk this morning to mesure the possible length of the BOG and saw workers busy making a fence for the Galloway cows that are grazing in the nature reserve behind my garden. Lucky for me it was about 100 meters away but right next (1 meter) following the planned antenna traject. This will be a electric fence so all my plans for the BOG or a Beverage went down the drain, bummer.

So, i went to inspect my Flag antenna and noticed something was not kosher. I had realy bad reception these last months but had no antenna to compare with since three days ago. I lowered the fiberglass pole on one side and on close look i saw a bad connection at the balun. After repairing this the Flag worked ok again :-)

Jurgen you are spot on with your technical explanation of the Flag. For the moment i have a single resistor mounted after testing for the best all round value. I know it is far from ideal and i will change this in the next Flag project. My Flag is only 10 by 4 meters small. Can i use a préamplifier to compensate the low gain and if yes what device do you suggest? Now we will wait for some sign for some better propagation.

Thanks for your answers.

I use this IC:
EL2125

It's low noise on MW but has higher noise on SW.
I set its gain to 3dB to lift the morning signals a little bit to get into the
better input range of Perseus so that its internal noise is reduced.
I made a small PCB for it

But there are other amplifiers around, but I don't know them

I was thinking about a Wellbrook ALA-100L amplifier to combine with the Flag. Could that be a good option? Would like to receive down to 15 khz or so and as high as 4 Mhz. 30 mhz would be ideal to get a wideband antenna but i guess i have to make a desission and leave the higher frequencies for my other antennas.

Liked your webside and was browsing trough it this morning. Lots of interresting stuff to be found, nice!

Thanks Jurgen, i found the site 2 weeks ago on the net and sanded an e-mail for availability and pricing of this amplifier but never got an answer. I send a new mail tomorrow.

I found aditional info on this very informative site;

As some of the comments say, it is not a well written piece. The other thing that no-one mentioned is that the switching signal for the 'Economy 7' (if it is still called that) electricity tariff is 'piggybacked' on the 198kHz carrier as a PSK data signal (if you analyse the 198 signal, you can clearly see it and, I believe, at times it is audible, although I maybe mistaken on that last part (might explain the heterodyne on the cricket commentary though!). Long Live LW - R4 in particular!

André

I have both the 380 and the 310 and I would say the 380 is more sensitive on MF. Just tested now (15.40 UTC) and the French 1377 is audible on 380 but not on 310. LW performance seems pretty similar on both.

Oh boy am I amazed !

I had to disconnect my rx due to a thunderstorm here.

So I turmed on my Sangian ATS909 and do hear
VOCM-590, 930-CFBC with the built-in antenna.
No extra antenna in use.
Never ever experiences that before.

I checked the Perseus servers in HOL & N.Germany and signals aren't that strong
there

Hi

several stations from American at sunrise today :

1130 WBBR Bloomberg New York, very strong with "Bloomberg" Identifier

1540 English language station playing Neil Young's Heart of Gold at 0645 khz
Later a Chinese sounding pop, then at the TOH, announcement for a multi channel
show spanning several US cities as well as Toronto and Ottawa, so I suspect
CHIN-1540 Toronto though their website says it's Chinese language that's on.

1520 , 1010 and 1050 were also alive with a weak station on 830.

Cheers

Patrice

This morning gave the strangest cx I ever experienced.

On the lower MW some MEX & CLM
On the upper MW I got Utah, and even Tijuana
Otherwise CUB was quite strong accross the band

Utah and Tijuana were logged the 1stt time this season, quite late actually

This shows the wide spread angle of incoming signals
Not all were looged
http://www.mwlist.org/mw_logmap.php?band=ALL&redir=true&datum=2012-02-23&omid=873

For the past few days WKCW 1420 has not been dropping down to 60 watts
at night but has been stuck at it's day power of 22kw. For many evenings
here it has been exceptionally strong at night.

Thanks Mike !
I already had some doubts, but forgot to mention that.
60W on such a crowded channel would simply get drowned

I wonder does it really make sense to use 60W? Or better stop at nights. Range must be very limited with a lot of interference?

Sun unleashes major flare
An extremely powerful solar flare, the largest of the past month, was registered by NASA Space Laboratory on Monday and an wars of a strong magnetic storm expected already tonight. Experts say that the recent plasma outbursts are on the so-called "dark side" of the Sun and their effect on humans is minimal, but things may change soon when the "dark side" of the luminary moves to face the Earth.

A NASA video of this flare was shown on the mid-day news here (Phoenix, AZ) just now. It's amazing being able to see events like this in real time. At present they are saying that this is the largest flare in at least five years and it is continuing to erupt.

I think they were forecasting that this solar maximum would have a double peak. If this is the case I wonder if we have passed the first one and are on a steady decline. But who knows? Forecasts can be wrong.

That’s right Mike. I know I should expect better reception in an easterly direction, being on the east coast, but yesterday evening’s reception was very good indeed. The Saudi station at Doha was also at very good levels but could not be heard underneath China until it signed off, demonstrating how strong China was.

2832. wide/narrow switchable AM bandwidth on a hifi tuner

Yahoo group: skywavesmw
Date: 2012-04-11 16:59:01 UTC
From: pe1etr
Topic: 2832 Message: 2832

Hello all,

I've mentioned my "new" Sony ST-S770ES tuner on the main SkywavesDX Group, but what I didn't mention on there is that this is the first tuner I've owned that has switchable AM bandwidth. (It only has 9kHz steps on MW and 1kHz steps on LW). I'm not sure what the AM bandwidths are yet. There was no AM loop with the tuner but I'm hoping to get one soon. I might rig up a long wire but there is a lot of QRM at my QTH.

Anyone else got a hifi tuner with AM bandwidth switching?

Peter
Blackpool, UK

2833. Re: wide/narrow switchable AM bandwidth on a hifi tuner

That's pretty unusual, Peter - has it got a synchronous detector too?
No chance! but that would really make the audio quality good, well, as good as the transmission ;-)
Modern IF filters can give a nice flat IF passband but the benefits are usually spoiled by the tuning of the antenna input, which always has a tuned LC circuit if intended for a mini-loop or random wire aerial. It is very rare to see bandpass tuning in the aerial tuning circuits of broadcast rx, and I don't think I've seen it in any audio tuner, so the rx will have a narrow peaked response, especially on LW
For a wideband front-end we have to look at up-conversion models, ironically used only for communication rx and a very few premium bc rx, as discussed on my DE-1103 page
But switchable bandwidth is very nice to find on any rx

- Julian

David,
you should also mention the DXers who helped you indentifying your log.
It is unfair just to suggest you did it all on your own while others did your work.

You've got the help of http://groups.yahoo.com/group/RealDX/
so better tell who helped you

Hello Julian,

I'm busy with other projectsnow-preparing receivers, computers etc for the Sporadic-E season, but I'll try and test the AM capabilities of the ST-S770ES soon and make some audio recordings....I hope I'll be able to upload them somewhere!

2841. Some MW logs from Italy + Perseus WAV files

Yahoo group: skywavesmw
Date: 2012-04-21 21:42:18 UTC
From: Günter Lorenz
Topic: 2841 Message: 2841

Spent some days on vacation in Volastra, a place in the "Cinque Terre" area, La Spezia province, Italy.
MW reception is quite good there, the QTH is only about 600 m from the shore. Here are some Perseus WAV files:
http://www.myradiobase.de/perseus/ (scroll down to bottom)

QRM-free reception of Kaduna on 594 kHz (Morocco was on 595), QRM-free also Radio Free Africa on 1377 (France Info was off for some hours), and reception of Radio Independência, Santo Amaro, Brasil, on 1440 kHz.

Here are some audio files:
594 kHz:
http://www.mwlist.org/sounds/20120416_2053_594_Kaduna.mp3

1377 kHz:
http://www.mwlist.org/sounds/20120416_2228_1377_RFA.mp3
http://www.mwlist.org/sounds/20120416_2246_1377_RFA.mp3

1440 kHz:
http://www.mwlist.org/sounds/20120416_2325_1440_unid_B_1.mp3 (note the TA!)
http://www.mwlist.org/sounds/20120417_0001_1440_B_Indep.mp3 (a great ID!)

2854. Blaupunkt Digiceiver for MW DX?

Yahoo group: skywavesmw
Date: 2012-07-20 08:57:39 UTC
From: pe1etr
Topic: 2854 Message: 2854

Hello all,

On examining the functions of my Blaupunkt Casablanca car stereo which I bought last Sunday, I've found that the "TUNER AREA" can be set to "EUROPE" or "N AMERICA". (This is in the User Manual)

EUROPE LW and MW
531-1602kHz 9kHz steps
153-279kHz 1kHz steps

N AMERICA MW only
530-1710kHz 10kHz steps

(EUROPE FM 87.5-108MHz 50kHz steps; N AMERICA FM 87.7-107.9 200kHz steps)

My other car stereos don't have this feature. This unit seems very good at removing QRM on AM bands. I'll experiment with it.

I have used my Casablanca MP56 and Nashville DAB47 (both Blaupunkt) on MW and the performance has really surprised me. It won't be a patch on the performance of an SDR or the AR7030, for instance, but the sensitivity on both is really good.

A Beverage will probably make them glow but I'll bet a simple loop will give good DX potential.

Good that no radios were harmed by your tests Peter, wish I could say the same for mine ;-)
I have never seen "TUNER AREA" on a Blaupunkt, is that in the menus somewhere? I guess there may have been 'area' settings on earlier models but it is likely they would be set by hardware links in the processor board, at the time of manufacture

Hello Mark,

Mine is old, from 2003 I think. I forgot to mention it is a Blaupunkt Casablanca CD52. I think the "TUNER AREA" selection might feature on most Blaupunkt car radios.

If you go to my youtube channel you will see it working on FM
www.youtube.com/user/pe1etr

Peter

Hello Julian,

I try and keep my radios are usually kept safe from harm...unless I go near them with a soldering iron :)

The TUNER AREA setting is in the manual:

Setting the tuner
In order to guarantee the perfect functioning
of the radio element, the unit
must be set for the region in which you
are located. You can choose between
Europe (EUROPE) and America (N
AMERICA). The tuner comes from the
factory set for the region in which the
unit was sold. Should you encounter
problems with radio reception, please
check this setting.
This set of instructions refers to the "EUROPE"
setting.
➪ Press the MENU button 8.
➮ Press the button << : >> repeatedly
until "TUNER AREA" appears on
the display.
➪ Press the < or > button : for
longer than two seconds to switch
between "EUROPE" and
"N AMERICA".
➪ Press the MENU button 8 or OK 11

Regards

Peter

From: Martin Payne
Topic: 2861 Message: 2861

Hi list,

BBC Radio 4 on 198 KHz LW seems to be off air from the Droitwich transmitter at the moment. I have a weak and semi-stable signal on 198 KHz, which I assume is a bit of ground wave and a bit of sky wave from Westerglen. It will be interesting to see if it remains off after dark, as we might get the opportunity to pick up something new.

Regards,
Martin

Hello Group !

This morning just before 04z, I heard what sounds like portuguese language on 1430.
At 0:17, I can hear something like "musica em sua familia".

Reception was just above the noise floor for a few seconds. Attached is a VERY POOR recording ... Sorry.

Any idea of what it can be ? A brasilian station or a US program in portuguese ?
Accurate frequency is 1430.008

Perseus SDR + ALA-100 loop
South-east France.

Regards,
Patrick

Hi Everyone

Looking East on MW

702khz All India Radio Jalandha from 00.15ut onwards for approx 20mins 22nd July (unable to get recorder to work or would have posted sooner)

This is what I heard

https://www.box.com/s/73a88d4d59f7fd9c0241
(https://www.box.com/s/73a88d4d59f7fd9c0241)

Can only be pres at the moment as cannot find an id, if there is one later in the tape will post as positive.

Hi all,

Following my previous post, I added a couple of videos on my YouTube channel.
The first one recorded with SDR-RADIO, the second one using HDSDR.

A 1k is all you need. You can find one here and it's really inexpensive. I
bought two from these people and use them in my flags.

The usual suspects - RS, Farnell, etc. - all do these.

Hi all,

Attached is a very poor recording (actually some extracts) of what could be 'heard' July, 25th on 1570 - 0356z, just before RAI (local pest) starts splattering on 1575.
Accurate frequency reading is 1570.001, and language sounds spanish.

Sorry for the ticks I could not get rid of.

Maybe Bethel ???

Good ears and headphones are required ...

Heard from my mountainous location, in the heart of the french Alps, using an indoor loop and Perseus SDR (playback by HDSDR v2.15)
Patrick, south-east France

That's excellent Peter, and this is your local station too! Your flag is working *really* well. I can't wait to get my flag back up next month.

I am going to try my hand at MW DXing again this coming winter season after a two year absence. Last year's solar activity wasn't as high as I was expecting. If this year is the same then some decent MW DX might occur from time to time.

I also plan to run out a beverage along The Wash this winter in the hope of catching some DX from the far east.

Good DX!

John

Thanks John,

The nulling wasn't by design, I just fastened the flag to a convenient wall.

Now all I need is a QTH with less QRM for the winter MW season :)

I feel your pain there Peter. This address is VERY noisy indeed. I have about S9+10dB of hash across MW here, but some RF chokes I made a couple of years ago made a HUGE improvement. These are ferrite rings from RS (the grey ones from Maplin might also work) with several turns of RG174, THREE of these inline with the flag feed as one wasn't enough. Have you tried anything like this?

A flag indoor Peter?
Or you have a big house or a small flag, what is the size of your flag antenna.
And you null this station out by turning the antenna?

Johan-Drieborg.

To be honest John I've given up at this location. My lease expires soon and I'll move and start again. I have tried ferrite chokes, but they made little difference. Maybe I'll try the rings.

Yes, Johan a small indoor flag, (168cm X 212cm) with a binocular balun, fixed to the wall.
I have a small flat (apartment) not a big house :)

Do try the ferrite rings Andrew. I have ten turns of RG174 around each ring. Even using just one ring makes a big difference, reducing the hash from +10 down to about S1, so very effective. Adding two extra rings took the hash down to such a low level it wasn't really a problem. I never had ANY luck with those clip-on ferrite tubes.

I know some of my hash issues are generated by my own computer equipment, especially the Sky modem. The modem even generates minor noise on band 2 but nothing serious there thankfully.

As for the 'grey' rings from Maplin, my mistake - they are in fact pale blue in colour. It's the grey ones I have from RS which are generally regarded as the better ones, though I have never compared them side-by-side.

Your location on the west coast should be excellent for TA. There was a DXer called Noel Green who lived in Blackpool who used to pull in some excellent TA DX. That was a long time ago - before my time I think :O)

We were considering a trip to the north of Scotland over the winter but I don't know if that is going to happen now as we are going away next month. It would be amazing to take the Perseus up there and use a beverage but it's a case of finding suitable accommodation as our old Sheigra cottage is no longer available for hire.

Is he really? Fantastic! I should be doing the same.

All this talk of flags and nulls has whetted my appetite again.

I visited the Gibraltar Point nature reserve today, at the northern end of The Wash, and noted some excellent locations just south of the reserve where I could string out miles of wire without being bothered by people, sheep or anything else (in theory - I don't anticipate having to endure the problems I had back in the Midlands). The Wash is such a peaceful, unspoilt location with very sparse population.

So, the plan is to get a flag up here after our holidays, mid to end of September and then beverage it thereafter. There are some areas of The Wash where I should be able to leave the beverage for long durations. I will upload any Perseus files if conditions are interesting.

Now to hope for decent conditions.

Hi John

Been getting a couple at the moment, Afghanistan (Khost Nr Pakistan with id), India, UAE and Africa, got a flag pointing East (not for Africa obviously) really quite interesting. Got a few lists if interested they are up to date.

All this talk of flags and nulls has whetted my appetite again.

I visited the Gibraltar Point nature reserve today, at the northern end of The Wash, and noted some excellent locations just south of the reserve where I could string out miles of wire without being bothered by people, sheep or anything else (in theory - I don't anticipate having to endure the problems I had back in the Midlands). The Wash is such a peaceful, unspoilt location with very sparse population.

So, the plan is to get a flag up here after our holidays, mid to end of September and then beverage it thereafter. There are some areas of The Wash where I should be able to leave the beverage for long durations. I will upload any Perseus files if conditions are interesting.

Now to hope for decent conditions.

Yes please Mark. That would be great. Must have a chinwag again some time. I'm well out of touch with MW DX at the moment. Congratulations on Afghanistan.

This evening, I had a quick listen on the Degen DE1103/internal ferrite in the same room where the computer is. I could still hear the UAE on 1521 in the hash. This was at 19:00 local.

Thanks

Hi list,

If anyone is interested in hearing this but isn't in range of any of
these stations, I put a video up on YouTube of the BBC Radio Kent
broadcast from Littlebourne: http://youtu.be/wInEZE-lRpc

Regards,
Martin

This has just come just right for the MW season. Let's hope they switch off after the five weeks.

I know it's a shame to see such long-standing broadcasters disappear from the airwaves, but MW DXers will welcome this.

John

2897. Re: [skywavesmw] BBC MW Switch Off Trial

Yahoo group: skywavesmw
Date: 2012-08-22 10:56:39 UTC
From: Martin Payne
Topic: 2894 Message: 2897

Hi John,

I've always found it a bit odd that some BBC local stations have many MW frequencies, whereas others have none at all. In many cases I'm sure a single transmitter would cover the county without any problems. For example BBC Essex has three MW frequencies, but all of them are easily picked up here in London. It's true for the commercial stations too, for example does Buzz Asia really need to use both 963 and 972, and does Premier really need five transmitters to cover London? I suppose they don't really take into account the needs of the MW DXer when it comes to frequency allocation.

It's a shame that MW doesn't really offer what it used to around 10 to 15 years ago. I remember when the Sun used to set and the international broadcasters from across Europe would start broadcasting in English. A favourite of mine was Radio Netherlands on 1512 KHz, broadcast from Belgium at night time. There was also the Voice of Russia on 1386 KHz which put out a huge signal, and the short lived LBH Radio broadcasting from the same site. Vatican Radio used to put out some (brief) English broadcasts on 1611 KHz, but now it's DRM. I'm sure I remember Merlin Network putting out some programs from Orfordness on 1296 KHz too, but empty web search results suggest my memory is wrong. Now all we seem to have is China Radio International via Luxembourg on 1440 KHz, which is not terribly interesting to me as it seems like you can find CRI any time of day on multiple frequencies in all of the main SW bands.

One of the good things about the BBC local MW services are that they cover a huge area which is not normally possible on FM. It's sometimes nice to listen to something which is local to a place where you don't live or maybe have never visited. I've never picked up BBC Radio Solent, BBC Hereford & Worcester, BBC Radio Devon, BBC Radio Cambridgeshire, or BBC Radio Guernsey on the FM band here in London, yet on the medium wave band they are present on my dial all day (and sometimes night too) every day. I suppose I had better shift my hopes from good local MW broadcasts to good DXing opportunities, as the future of UK MW radio doesn't look too hopeful right now. Is anyone here up for putting together a powerful MW rig and purchasing a ship? :-)

Regards,
Martin

Radio Bremen on 936 did the same a few years ago.
They went off air without any announcement and waited for complaints.
Very few arrived and they never returned to MW. That indicates that
transmitting on MW is wasting a lot of license fee money.

Since then I get XEQ-940 Mexico City very often in winter

Oh yes. I think I would love to give that a go. ;O)

I _am_ saddened by the switch-offs, but as has been said, there probably aren't too many people who listen to the MW services of BBC local radio these days. I remember one of the few times I purposely listened to BBC Radio Nottingham on 1584 was when I was in Sheigra in the ewinter time. The signal used to peak very well up there in the north-west of Scotland around dawn and I could check the weather reports for any snowfall, etc.

I still haven't listened to the 1368 kHz message but I'll put up a recording up if I do. I enjoy some of the programming on BBC Radio Lincolnshire. We accidentally bumped into some of the broadcasting staff after an event last week while out and about. So friendly and they took time to have a chat. The BBC local stations provide an excellent service, unlike the commercial networks like Feart, etc.

At least you have decent local radio coverage, which is more than what we get in New Zealand, the vast majority of stations are networked from Auckland. Our local NewsTalk ZB station dropped the local morning talk back and replaced it with the networked version.

A few months later, advertising billboards appeared proclaiming "You spoke we listened" and announcing a resumption of the local programme. The announcement was a load of spin, the latest ratings were announced a few weeks prior and the station had lost its first place which it had held for a long time.

Interesting that Buzz Asia's frequencies are 9 kHz apart, has Premier done the same thing with their five?

Paul

No, they are using 1305 (x2), 1332, and 1413 (x2). The transmitters on the same frequencies are not at all synchronised, so even my local TX sounds awful with a ~8 Hz beating if the ferrite bar is not pointing in the right direction. It makes me think they'd definitely be better with fewer TXes.

To my mind now is the time to give Radio Caroline a channel on the MW band they can do no worst than those that are going off air and might even have us over 65s tuning in, then we have the land pirates where are you.
My old MW tube tx recently came up on ebay it was made in 1985 and sold in 1997 to a friend and now sold on ebay for twice the price so someone is interested in at least putting out 25 watts xtal controlled on the band. Alan.

Ground wave reception of Clipstone is always possible in London, but not on 1584 due to London Turkish Radio on the same frequency. At night time BBC Radio Nottingham dominates the frequency, and usually has an odd echo from BBC Hereford and Worcestershire due to the two stations relaying 5 Live with a slight time delay. Reception was actually pretty poor last night though, but I did just about manage to hear their switch off message. It was interesting to hear the announcer pronounce DAB as a word (rhyming with "blab") instead of pronouncing the individual letters. I've never heard anyone refer to it that way before.

Indeed, it's very rare for a MW signal to need a local fill-in;
it's very common for VHF.

> For

The excessive use of frequences in London is in response to the
large number of pirate stations that used to be around. The policy
of the DTI (as was) was to fill up the band to make sure there
were as few usable spaces as possible. Notice how all these
stations use ex-pirate frequences? Which, incedentally, shows the
inaccuracy of previous DTI claims that there were no frequencies
available and the pirates were the cause of co-channel
interference to other broadcasters!

When I lived in south London, I frequently listened to Radio
Brighton or Radio Solent on a portable. Indeed, I even joined the
latter's listeners' club!

I wonder if the old Radio Dolfijn rig (ex Gunfleet lighthouse) is
still waiting to be claimed? Last heard of in storage in Harwich
police station.

Hi Lawrance. Liked your bottom liner re putting in hard cash for a pirate ship, plenty here in Maldon Essex rust buckets that is.
We have the Brent vintage 1935 light ship I think it will never move out of the mud plus loads of others.
Was not Caroline going to come home here, its had enouth money given to it to have six inches of paint on it by now.
I would put in my pension in getting something going but please let me dream in peace.
The DTi what a joke there were and all that TV coverage re interance from pirates it never happens in the US with 60 satation per township, and now OFF the COM or off the complete idea as to how radio should be run should be there name.
We had the good times, remember them there never coming back while this brain dead lot governs the airwaves, people power used to rule remember CB radio - well we won in part.
The thing about OffCom is someones pockets have been lined far to much to offen.
I read recently that a 5 KW tx can cost as little as £45.00 a hour to run on MW bet those in power soon changed that, by upping frequency rental. I could give you more maybe later.
Alan.

Hi Martin

The government here got so hell bent on extracting money out of the spectrum that some frequencies have been sold more than once. This might well be ok for land masses the size of the UK or Australia but in New Zealand ...

Radio Sport have a transmitter in Christchurch on 1503 kHz (we are located halfway down the east coast of the South Island) and also in Wellington (southern end of the North island) also on 1503 kHz. Neither transmitter is synchronised so similar problems occur here too. Kaikoura (towards the northern end of the South Island) is within range of both transmitters which means that not only do the signals beat against each other, they also get Wellington and Christchurch adverts at the same time.

There were plans to shift the Christchurch 1503 kHz transmitter to 1017 kHz and the change actually took place for a few weeks. Things were changed back in February 2011 following a magnitude 6.3 earthquake located very close to the city. Because of liquefaction damage to the NewsTalk ZB 1098 kHz transmitting which is on a separate site, it served as a backup to their transmitter. Because things have yet to settle down - we had a 6.4 in June 2011 and a 6.0 in December 2011 all within close proximity of each other nobody has been game to switch the feeds! The three quakes were aftershocks related to the 7.1 quake which occurred in September 2010 about 25 miles west of the city. As of today's date the total stands at 11628.

☐Interesting that Buzz Asia's frequencies are 9 kHz apart, has Premier done the same thing with their five?

No, they are using 1305 (x2), 1332, and 1413 (x2). The transmitters on the same frequencies are not at all synchronised, so even my local TX sounds awful with a ~8 Hz beating if the ferrite bar is not pointing in the right direction. It makes me think they'd definitely be better with fewer TXes.

Regards,
Martin

Hello Mark,

In the second clip at 26/27 seconds I hear "All India Service".

The music in the first clip certainly sounds Indian or Pakistani.

2932. sony srf 49 or 59 - attach frequency counter display ?

Yahoo group: skywavesmw
Date: 2012-09-13 09:55:23 UTC
From: bondequipe64
Topic: 2932 Message: 2932

Hi All

Has anyone tried to attach frequency counter display to a sony srf 49 or 59 ?

I bought a counter off ebay and connected it to a point on the board on my 49 where I had found a local osc signal (on am) with my scope, but perhaps predictably this caused the received station to shift from 1458 (ish) to 1215 (ish), ie: knocking the receiver right out !

Any suggestions welcome

Cheers jm :) Cheshire UK

From: Julian Hardstone
Topic: 2932 Message: 2933

That's very enterprising of you JM. I'm sorry that the schematic diagram had disappeared off my SRF-59 page on ukradio.info, you'd think the hosting company would look after your data :-{
Anyway, you can now see the schematic there, and you'll see that the best place to connect the counter would be at pin 23 of the rx IC. Make sure the counter has a high-impedance input, not 50 ohms, and use the shortest possible unscreened leads. There's bound to be some frequency shift doing this, I wouldn't like to predict how much. Maybe you could try adding a source follower stage to reduce the loading effect
Note also that the counter will indicate 2 ? (rx freq + 55kHz), so listening to 1458kHz means the LO is at 3026kHz
If you are experimenting with mod's to the SRF-59, I reckon the most useful thing you could try is increase the size of the ferrite rod antenna. If you could make a major increase in sensitivity you'd really need the digital frequency display!
Good experimenting - Julian (Stockport)

2939. Rajkot nailed !!

Yahoo group: skywavesmw
Date: 2012-09-19 05:45:19 UTC
From: patrice.privat
Topic: 2939 Message: 2939

Hi

I monitored 1071 khz from 0045 to 0130 utc this morning with a Panasonic RFB45 (no ultralight).
After nulling out Talksport, I had a station in Arabic with news ending at 0050 UTC followed by
Arab music, I don't know what it was (Algeria, Syria, Yemen, Egypt,???) but it was rather strong with the set turned slightly to the NE/SW (probably RTA1).
Anyway a station in Farsi appeared after that, taking advantage of Talksport's complete fade-out (that's IRIB Qom from Iran, already heard last winter) and, and...
JUST as I was giving it up, a typical Hindi music gained strength and rose to a peak of 2 minutes and
never came back, it was strong enough to drown Iran and the Arab station.Alas, no ID !
It may have been All India Radio Rajkot, Gujarat state in its last peak before local sunrise.
I have checked EMWG, there's no UK Hindi station on 1071 and anyway there would have been many more returns in 45 mns. So add me to the Happy Gang that heard Rajkot this fall.

Hi Pat

You are absolutely correct. DX and its definition all depends on where you are located. I'm in London and mainly do NA/LA dxing on MF. Some stations are "easy" e.g. WWZN 1510 but others are not such as KDKA 1020. However the boys in Scotland would consider KDKA to be almost local and not DX.

CJYQ on 930 was very "easy" for years until a few years ago when it became very rare and was considered DX as co-channel CFBC always dominated. However last season and this season CJYK has made a "come-back" and is now common around 23.00-0000 UTC. You are doing ultra fine business with your MF DX in the Alps, OM.

Bien a toi

Stuart

Yes Pat, I understand that in mountainous regions it is a lot more difficult. My comment was only to reflect my QTH near the sea. 2 years ago while doing antenna terminator optimizations, I used 1521 Saudia Arabia as a signal right from the rear (to get it to a minimum), and each time before dusk China turned on and ruined my work.

OTOH I once on a winter evening had 1520 Buffalo at local levels when they still ran their oldies Top 40 format, while I emailed with an Austrian DXer and he heard just nothing. First I could not believe that, and expected that he get at least a bit.

> version, ala http://www.dxing.info/equipment/ewe.dx

The nulls depends solely on your termination

A simple resistor will not give the max. possible null.

My 30x4m EWE null was not great, until I used a R/L or R/C combo. That made a huge difference
It is very f-depended, so I build a jb-terminator (R/L/C network), that gives best nulls for all channels at the same time, good for broadband recordings.

The values you must calculate and measure yourself, since it is very qth dependend

I was using the ewe page to show the size of my old flag - it was originally a ewe but I added the bottom wire.

The flag I used to use seemed quite broadband but I confess I did not build the boxes for the transformer or the resistor box. I had a lot of help! :-[

Perhaps further improvements could be made but I will stick to my original, trusty old flag which is folded away in a draw in my shack at the moment. I shouldn't take too long to erect. I should have time over the weekend.

2960. India on my pocket radio

Yahoo group: skywavesmw
Date: 2012-09-21 21:04:48 UTC
From: patrice.privat
Topic: 2960 Message: 2960

Hi

short video of Air India Radio (A.I.R), Rajkot, State of Gujerat
on 1071 khz AM, heard on my ultralight Tecsun (no antenna)

https://www.box.com/s/iqc7dsrvk78jprbg94mp

Amazing reception 6,584 km distance !!

Signal defeats Talksport Newcastle (on the same frequency).

2961. AN-200 nulling with reduced QRM-videos

Yahoo group: skywavesmw
Date: 2012-09-23 07:56:26 UTC
From: pe1etr
Topic: 2961 Message: 2961

Hello all,

I managed to get a couple of ferrite torroid rings from Maplin's yesterday (rip off of course). In these videos I'm using my Tecsun AN-200 passive loop to null stations, with RG-174 coax wound around one of the torroids for now.

Thanks especially to JF and also JB for your QRM reduction suggestions.

Nulling local BBC Radio Lancs (Asian Network) with Tecsun AN-200 passive loop antenna to obtain reception of RNE R. Nacional (Spain).

2962. Yesterday's far east reception / beverage hunting

Yahoo group: skywavesmw
Date: 2012-09-23 10:09:54 UTC
From: John Faulkner, Skegness
Topic: 2962 Message: 2962

Yesterday afternoon was spent travelling around the wash, hunting for beverage sites. Plenty of locations were found but all seemed heavily populated by dog walkers and book readers. I found three choice locations, two of which are on private land however. This didn't stop me driving around them 'innocently' in the hope that I would meet a farmer and try to obtain permission to use some of the land. I was fortunate to meet a farm worker at one of the locations and attempted to gain permission to run out a wire. Since he wasn't in charge, though clearly had some authority, I was able to pass on my phone number and web details in the hope that the farmer might just get in touch regarding permission. It's a long shot but there are scores of other locations I could use if this doesn't come into fruition, albeit slightly less favourable for a full wave MW beverage. There are other locations to the north of Skegness I might also investigate and many of these would be ideal for a north-facing beverage.

On my travels I took the DE1103 and found a solid signal from China on 1521. I know this is a powerhouse, but the signal was blasting through at 17:00, even on the car radio. By 18:00 it was buried under an even stronger Saudi.

I was more intrigued by other stations coming in at the top of the band. Particularly impressive was a Russian station on 1593 which was at local strength, playing quite exotic eastern-sounding music. I am not sure if it might have been something from the far east going by the content.

A powerhouse Arabic station was present on 1575. Kuwait?

Good DX!

John

2971. 1520 WWKB Buffalo NY USA (I think)

Yahoo group: skywavesmw
Date: 2012-09-25 07:02:30 UTC
From: pe1etr
Topic: 2971 Message: 2971

Hello all,

I bagged my first ever MW TA this morning, with my new NW indoor flag (a bit smaller than my SW flag). Unfortunately much more QRM with this orientation. (I have RG-174 wound on two ferrite torroids)

I hear "Western New Yorkers" near to the end of the clip.

It should be Phil Hendrie at this time (around 05:50 UTC). Anyone know his voice?

WWKB should be easy to hear there at night since KB is 50kw directional east at night. Just to show you how old I am...KB was one of my main sources of rock music when I was in the US Navy back in the late 60s and was stationed in Iceland and Morocco. One of my other favorites was R. Luxemburg on 1439khz.

WWKB is a powerhouse.

> So it is WWKB.

WWKB should be easy to hear there at night since KB is 50kw directional east at night. Just to show you how old I am...KB was one of my main sources of rock music when I was in the US Navy back in the late 60s and was stationed in Iceland and Morocco. One of my other favorites was R. Luxemburg on 1439khz.

WWKB is a powerhouse.

Showing my age too - I remember when it was a rock station. I remember WABC 770 being top 40 too. 930 CJON anybody?

Started getting my Perseus/beverage setup together today ready for a session at the weekend, weather permitting.

HI Everyone,
Just thought I would chip in and agree, conditions have been really good since mid August,however things have gone up notch over the last 48 hours.
I've been recording all the MW band every night since 23rd August using my Win radio G33,normally I can skim through a nights session within a hour or so,last night I had to stop half way,as I was getting so many carriers.
My log book will be full this month, from 23rd August to 22th Sept I logged 36 Transatlantic TX, having restarted this month, I managed to get another 6 new TX's.
1520Khz is a regular here at my QTH, another frequency that's been louder at my QTH this year is 1130Khz WBBR.Of course it depends your QTH.

I personally found the last 2 years a major let down on the MW DX front,however it may be early, but 2012 could be a vintage year.

2981. MW List

Yahoo group: skywavesmw
Date: 2012-09-27 19:39:06 UTC
From: John Faulkner, Skegness
Topic: 2981 Message: 2981

I have just created an account with the MW List. I wondered how many others used it here? http://www.mwlist.org <http://www.mwlist.org/>

I have used the FM List for a few years and cannot sing its praises enough. It is such a useful resource and DX aid. I plan to use the MW List online logbook and submit live loggings. These will be immediately visible to other users, thus providing realtime alerts to other users where the DX is. The FM List has been excellent for this.

If you are not using MW List I recommend you give it a try. There are so many benefits.

Yes quite a few know that during the last seasons and have logged quite a bit.
Me included via StationList which makes it extremely easy to report logs found
on Perseus recordings with the time of reception and not time of listening, all
handled automatically.
And don't forget the MW-offset data from MWLIST, updated very often by reports
many DXers.
So do contribute your precise measurements, too

2984. MW US DX Still Great..

Yahoo group: skywavesmw
Date: 2012-09-30 10:42:04 UTC
From: Damien
Topic: 2984 Message: 2984

Conditions on US MW DX has still really good here at my QTH, so much so I am falling behind slightly on my nightly WinRadio DCC recordings.

My current tip, is from 05.00 UTC onwards to 06.30 UTC, as we go into greyline. Managed to get 10 mins worth of WTAW 1620Khz Texas,then KOZN 1620Khz Bell Vue.

All in all, we have had an amazing September on the MW band.

Is anyone else having the same sucess I'm having out there?

2985. SWPC Alert: G3 Storm

Yahoo group: skywavesmw
Date: 2012-10-01 09:24:08 UTC
From: John Faulkner, Skegness
Topic: 2985 Message: 2985

Just received this from SWPC Alerts:

Space Weather Message Code: ALTK07
Serial Number: 86
Issue Time: 2012 Oct 01 0305 UTC

ALERT: Geomagnetic K-index of 7
Threshold Reached: 2012 Oct 01 0300 UTC
Synoptic Period: 0000-0300 UTC

Active Warning: Yes
NOAA Scale: G3 - Strong

NOAA Space Weather Scale descriptions can be found at
www.swpc.noaa.gov/NOAAscales

Potential Impacts: Area of impact primarily poleward of 50 degrees
Geomagnetic Latitude.
Induced Currents - Power system voltage irregularities possible, false
alarms may be triggered on some protection devices.
Spacecraft - Systems may experience surface charging; increased drag on
low Earth-orbit satellites and orientation problems may occur.
Navigation - Intermittent satellite navigation (GPS) problems, including
loss-of-lock and increased range error may occur.
Radio - HF (high frequency) radio may be intermittent.
Aurora - Aurora may be seen as low as Pennsylvania to Iowa to Oregon.

// I think this is the first G3 alert I have received for a long time.
Looks like the lower frequencies will be very diturbed for a few days.
10m is dead too after a few days of good conditions up there.

Aurora Watch UK are also reporting "Red Alert".

I wish so much I had been out with the beverage yesterday as planned as
it could have been very interesting to catch the conditions just prior
to the storm.

2986. Some NA DX

Yahoo group: skywavesmw
Date: 2012-10-02 13:49:42 UTC
From: Satnipper
Topic: 2986 Message: 2986

Conditions to North America on medium wave went belly-up two nights due to the latest solar eruption. However the weekend saw a continuation of the good conditions so far this season. http://youtu.be/QKlhDOccj-Q shows two catches at 0400 UTC Saturday morning. WBBR on 1130 KHz is an easy catch whilst WLIB on 1190 is not that common into London.

I thought it might be interesting for folks to see what the old stalwart CJYQ is sounding like these days on its dx comeback. This is how the St John's Newfoundland station was sounding this morning on 930 KHz. Of late it has been making into London earlier than 0100 but not today. Note the id "This is Newfoundland/Labrador" - http://youtu.be/55VbtEkmbTk

Cheers

Stuart

That's a nice clean signal Stuart!

I am trying to get my flag up this afternoon but everything is working against me, not least the fact that the box with the variable resistor has gone missing. Looks like I need to adopt Bodgitt & Scarper technology again to get it working.

Thanks John - can also use something like a 900 ohm fixed resistor as well. I normally tune my variable resistor to null a certain frequency (last year 1008 KHz) but I haven't bothered this year yet. I got my resistors (and balun until replaced with Wellbrook FLG100 pre=amp/balun) from eBay seller <http://myworld.ebay.co.uk/kafa2500/> kafa2500 .

Cheers

2989. Perseus and flag at the ready!

Yahoo group: skywavesmw
Date: 2012-10-03 18:06:03 UTC
From: John Faulkner, Skegness
Topic: 2989 Message: 2989

The flag is up!

It took a lot of messing around as I wired it up back to front to begin with, nulling the north-west instead of the south-east.

The f/b seemed excellent when I nulled Lincoln 1368 to leave Italy. So I simply swapped the boxes around but the f/b did not seem anywhere near as good. I used Flevoland 1008 this time but could only reduce it to S7. Both Lincoln and Flevoland were S9 + 10dB before nulling.

This is what happened to Lincoln 1368 when nulled:
https://www.box.com/s/ml531wavcrdekk3lgjf8

The problem could be that I am only using a simple variable resistor to tune the flag whereas before I had a box of tricks designed and built by Julian. I am sure this would tune the null a lot more deeply - if only I could find it! I will swap them over when I do.

I am pleased to find that I have a super-quiet MW band after using a couple of home made chokes (15 turns of RG174 around a RS ferrite ring). Without these my background noise levels were around -110dB. That's still very good. Adding one choke reduced the background noise to -120dB and down to -125dB with two of them inline. This is extremely good news. Signals are not apparently affected in the slightest.

So, Perseus is installed and ready to tackle the DX. Can't wait to see what the first night brings.

Good DX!

John

That's a serious log Mark. Well done on those!

I could reverse the flag again but it will probably cause more trouble than it's worth. After building it while the neighbours were out today I found I had to reverse it after they had returned home. It's only a temporary listening wire though (for winter) and it camouflages perfectly against the trees down that side of the garden. So I won't bother. You know me Mark, I'd have aerials all over the palace if I could. The new flag seems to be working well though. I have lost Holland under two Spanish stations on 1008 so the directivity seems more than adequate. Why is it those Spanish stations get through no matter which way we point? ;-O

No carriers from North America yet. I thought they might have started to appear by now. Hopefully in the next hour.

Cheers

John

From: John Faulkner, Skegness
Topic: 2989 Message: 2996

It looks like an aerial Mark. The top of it is too high to hang washing on :O) We will try and pass it off as a lighting effect. We have several on the garden as it is. Not sure how I would explain tuning the lights using a pair of cordless headphones. We're all talking nicely at the moment and it's not them we have to worry about.

I actually thought about putting the flag in the loft but the noise received on the DE1103 in there yesterday told me that I really shouldn't try it.

Does anybody know why I get a 60 day limited evaluation period message when I run Perseus v4.0b? I presume I can ignore this as I own a Perseus. The website says this is for people who don't own a Perseus. Seems a bit strange unless they are trying to limit who can use the software.

Transatlantic carriers now abound. I am seeing three definite on 1510 and at least two other weaker ones!

From: Satnipper
Topic: 2989 Message: 2997

If you have your Perseus plugged into the computer and all is working then the message is misleading as it relates to the add-on down-converter license. You can safely make the tick and it won’t appear again.

I could reverse the flag again but it will probably cause more trouble than it's worth. After building it while the neighbours were out today I found I had to reverse it after they had returned home. It's only a temporary listening wire though (for winter) and it camouflages perfectly against the trees down that side of the garden. So I won't bother. You know me Mark, I'd have aerials all over the palace if I could. The new flag seems to be working well though. I have lost Holland under two Spanish stations on 1008 so the directivity seems more than adequate. Why is it those Spanish stations get through no

matter which way we point? ;-O

No carriers from North America yet. I thought they might have started to appear by now. Hopefully in the next hour.

Cheers

John

It seems to be working well though

1140 0502 CUB Radio Rebelde, 3 txs listed ID after news 0 km

Conditions were poor overnight but I logged nine TA countries in total! So what? It was great to be back at the MW dials. "Dials"? Well, it was great to be clicking my mouse on the Perseus control screen again. Not quite the same thing of course. Give me a big knob any day! (I didn't say that!)

No North Americans heard at all. Instead it was just a few of the old regular Latinos. One interesting station one which kept cropping up was on 1440, a Brazilian station which never quite rode up above the co-channel Saudi. What was probably more interesting was that it was off frequency, coming in at around 1439.87. All I could hear was a Portuguese OM monologue which peaked around 00:00 to 02:00 GMT. A gentle song was heard on a particularly good peak at 01:27. Maybe somebody knows who this is.

Hi John

Some nice LA dx there! You will find this useful
http://www.myradiobase.de/mediumwave/mwoffset.txt Don□t see any Brazilians
on that offset though.

You□re right in that it was very bad night for NAs □ I had some LA around
0300 but too weak to id here. My best □dx□ was 1670 WPLA Dry Branch Georgia
which always seems to come through when NA conditions are poor.

Regards

Stuart

Hi Stuart.

I lost the myradiobase URL when my hard drive failed so many thanks for this. There were also other lists such as Topaz which gave formats. Any idea on the URL for that one?

Nice to see my background noise drop to -130dB overnight. There isn't really any need to use the Noise Reduction facility with those sort of levels, although using it does tend to reduce some of the general mushiness of the audio.

I have just briefly been going back on my recording, checking for activity on 1670 - and I hear nothing! I see TA carriers across the X band but nothing came up to audible levels on 1670. I did hear however hear audio on 1700 for a time around 02:00 and on 1660 from around 03:30 to sun-up, but that was all. Interesting how our reception varies over a short distance.

TA fade-out here was 06:00 (all times GMT/UTC).

Cheers

John

Here☐s Topaz - http://topazdesigns.com/ambc/ and of course MWLIST is good as well ☐ especially for Latins
http://www.mwlist.org/mwlist_quick_and_easy.php?area=4

That is quiet ☐ I use a pre-amp so nothing like as quiet as that here ☐ just amazed I can actually do some MF dxing in suburban London.

Sunrise is now 0607 UTC here but like you 0600 was dead this morning - whereas few days ago I had Toronto Canadians and US East Coast powerhouses booming in at that time.

I do see a lot of carriers but very often no audio making it through.

Cheers

Stuart

3006. MF last night

Yahoo group: skywavesmw
Date: 2012-10-05 13:25:33 UTC
From: Satnipper
Topic: 3006 Message: 3006

In a word "pants".

However WPLA was making it in again weak on 1670 at 0600 UTC. Listen out for mentions of Fox Sports 1670.

The most consistent strongest x-band signals are 1660 - WGIT Puerto Rico and 1620 Radio Rebelde Cuba. Last night at 22.30 UTC Caribbean Beacon had usable audio on 1610 KHz from Anguilla.

Regards

Stuart

Just going through my recording now Stuart. Agreed, it was very undergarment, but it started to liven up at 06:00. I have something I need to post to Real DX for extra ears but I'll post it here too:

1570_unid_0559_05-10-12_(JF): https://www.box.com/s/1nx91bh9tzy6740aggth

Think I hear an ID in the pile-up. See if you hear it too.

Cheers

John

1290 0400 VEN YVLF Radio Puerto Cabello, Puerto Cabello (cbb) Radio Puerto Cabello, La Noticia 7637 km
1520 0400 USA WWKB AM1520, Buffalo (NY) For the latest on the 2012 presidential election, this is fifty thousand watt AM 15-20 WWKB BUffalo 5697 km
1620 0500 CUB Radio Rebelde, Guantanamo or Guanabacoa Time pip and ID, as 1180
1570 0558 PRU *OCU4J Radio Bethel, Lima (lim) Pres*. Vida Radio ID & mention of Radio Fandango, all in accordance with station format apparently.
Tnx BD & AG at RealDX for help. 10255 km
930 0607 CAN CJYQ, Saint John's/Groves Road (NL) Folk music, Lynn McClean (?) presenter. Quick promo for Newfoundland and Labrador 3728 km

Conditions not so good overnight again, but there was a surge in TA signals at 06:00. Here on the east coast TA audio hung on until 07:00 and carriers were audible past 08:00.

I was intrigued by the pile-up on 1570. There were at least two Spanish stations. Recording sent to RealDX group and replies thus:

OM with "Radio Fandango" at seconds 31. Seems religious, "tota vida" "all life" Radio Bethel from Peru is religious. I guess I'll leave it to the experts in the group hi!

Barry Davies, Carlisle

At sec. 5 "1570 AM" then what could be a call-sign starting HJ, so a Colombian station but the other station covered the first one.
At sec 20 I think there is a "Viva (or vida) radio" slogan.
At sec. 49 "Radio ??? por 1570..."
At sec. 59 I believe "Bethel"

Alessandro Gropazzi, Trieste,Italy

I will leave it as "Presumed" for now, but after talking to Barry he seems to think it is quite likely and says it has become something of a pest on 1570 lately. It's certainly a new one to me. Here is a recording of 1570 made between 05:55-06:00:
https://www.box.com/files/0/f/421772738/1/f_3459286762

Conditions around the midnight period were near non-existent compared to last night. Nothing much happened until 06:00 when weak Latin stations appeared on several frequencies. 980, 1010, 1140, 1390, 1550, 1580 & 1590.

Good DX!

From Alessandro Groppazzi in a post to RealDX:

Hi John,

Bethel for sure.
At sec 23 the YL gives the qrg "97,1 FM" that's for Lima
At 1 min 47 sec "Bethel 96,7"

Unfortunately I'm not able to understand the ID of the second station,
maybe Mauricio or Henrik coul help you.

Alessandro

// And so confirming Radio Bethel on 1570. A new one for me.

John

1010 0600 CAN CFRB Newstalk 1010, Toronto/Oakville (ON) Newstalk
10-10 IDs 5692 km
1640 0600 USA WTNI 96.7 The Champ ESPN Radio, Biloxi (Gulfport) (MS)
ID ''1640 WTNI ..... The Champ'' after lively promo 7293 km
1620 0601 CUB Radio Rebelde, Guant?namo/CTOM3 (gu) Vocal ID. Echo
with Guanabacoa transmitter 7276 km
1620 0601 CUB Radio Rebelde, Guanabacoa/CTOM2 (ch) Vocal ID. Echo
with Guantanamo transmitter 7490 km

Not so good during the early part of the night again but the sunrise
period saw an increase in conditions generally. It was however quite
frustrating as, although there were lots of TA signals, there was also a
lot of splatter. Many stations just didn't ID on the hour.

1590 was probably the most interesting as there was Latin music mixing
with a US accented YL around 06:00.

Good DX!

From: jmeezen@kpnmail.nl
Topic: 3012 Message: 3012

Last 5 days there where almost no TA conditions here.
This morning it was the first day I heard some signals.

My log:

0415 590 can VOCM
0445 1130 usa WBBR
0455 1660 usa WWRU
0459 1660 usa WCNZ
0500 1610 ??? Caribean Beacon
0515 1510 usa WWZN
0537 1520 usa WWKB
0547 820 usa WBAP

Also there where 2 unid,

At 0525 on 1700 I heard for some time some weak talk, and at 0530 on 1570 I heard music, and male talk.

From: John Faulkner, Skegness
Topic: 3008 Message: 3013

It seems I also heard Guatemala on the morning of October 5th. This is another new one here. My reply to RealDX explains all, complete with recording with which Mauricio has kindly made a recording:

/Hi!//
//The second station is Radio VEA from Guatemala!. The short clip contains part of//
//the usual TOH ID just at the begining... "transmitiendo en 1570 AM para toda Guatemala".//
//The last words are hard to understand. Listen to the attached rec.//
////
//73s//
//
//Mauricio Molano//
//Salamanca//
/
I have uploaded the recording to my Box address:
https://www.box.com/s/zx9p4dxymkcpjda2m14u

Henrik Klemetz has also advised that that Radio Bethel and TGVE have been heard mixing together on 1570 for the last few weeks in Scandinavia.

Cheers

John

3014. 1080 WCIT ? Pres

Yahoo group: skywavesmw
Date: 2012-10-07 08:38:07 UTC
From: damienread@ymail.com
Topic: 3014 Message: 3014

HI All,
Can anyone just confirm this recording? It's a headphones job, just after 06.00 pips an american voice makes a ID thats sound like "WCIT"

1080 WCIT Presumed
<http://dl.dropbox.com/u/91837451/1080khx%20WTIC%20Hartford%20CT%2006.00\UTC%2007oct%202012.mp3>

Also does anyone have a idea of a golden oldies station US TX on 800Khz, it plays 1950's Johnny Mathis Style mx back to back,as this seems to be a format around 04 to 06 UTC, I just can't seem to get a ID,and it's been bugging me for weeks now.

Many Thanks
Damien

Sorry too weak for me.

Commonest station on 800 KHz is VOWR from St John's NL - normally non-stop easy listening music at that time - http://www.vowr.org/

Cheers

Stuart

Hello Damien.

I hear the call but it is very weak. WTIC Hartford CT is the the usual north American on 1080 and the ID does sound like that to me. I would say very likely that is WTIC. I do not see a WCIT on that frequency anyway.

As for an oldies station on 800, assuming it is north America, they have very strict policies on formats. Somebody sounding like Johnny Mathis could fit either "oldies" or "Adult Standards" (formaly "Nostalgia"), depending on the song. Adult Standards tend to be more 40s/50s crooners such as Bing Crosby and Dean Martin. Oldies is typically pops from the 60s, 70s, etc. My guess is that you heard VOWR in St Johns NF, the most regular transatlantic station on 800. They are listed with religion but they are often heard with back to back oldies style music.

Cheers

John

Poor conditions in general still prevailing. Haven't check 0600 yet but I had:

1630 0500 USA KKGM Fort Worth Dallas Texas
"16-30 AM KKGM Fort Worth Dallas" Fair

Amazing that CJYK is not the most consistent NA MF signal here. 1610 Caribbean Beacon and 1660 WGIT Puerto Rico are the most consistent Caribbean stations.

Most unwelcome trend is for more and more Dutch pirates to transmit on x-band frequencies like 1640/1650/1660 etc. Why can't they use the non Region 2 channels like 1645/1655 etc?

Regards

Stuart

Thanks John & Stuart for the help,
Yes good spotting John "WCIT" was a typing error, and I then copied and pasted in error DOH!,it should have been WTIC!
I think you are both correct with VOWR, I just haven't got an ID yet.

As you can may be tell,I'm a bit new to MW DX, your logs are great,as it gives me the chance to go back and listen to frequencies I may have missed.

Again thanks for the help both. Let hope the conditions stay good!

Who is CJYK? Do you mean CJYQ?

I missed the KKGM ID on 1630. Thanks for this tip. My reception was very poor though. I had to use maximum noise reduction to remove as much of the mush as I could - have a listen: https://www.box.com/s/a31hfbcslmmvdp1r5ir1 How did yours sound?

Regarding WJR: I see a carrier on 760 but the audio is too weak to hear. I don't know if it is WJR or something else, a Latin station for instance.

I had carriers on just about ervery frequency, most of them were just too far in the noise or below. Anything on 670 and 710 were also too weak, but I could hear something on both frequencies - not in parallel however.

This has given me a sharp reminder that I probably won't do very well with transatlantic DX due to my east coast location - certainly not as well as those further west. Ideally I would need to be on a west or north coast. My forte should be the far east but I know very little about Asiatic DX or the languages and my main interest is in the Americas.

Tell a lie, I can hear both Rebeldes on 670 and 710. Before the top of the hour I hear the same OM speech parallel with 1620.

Cheers

Yep CJYQ my bad, sorry.

Reception was poor at 0500 but came up at 0600 and was not too bad though predictably it did dip on the actual id but it was them.

Remember for the Newfoundland stations they are UTC - 3.5 hours so their TOTH is our BOTH if that makes sense. Having said that I don't think I have ever heard an id from VOWR.

Finally here is how KKGM and WJR were sounding at 0600 this morning - http://youtu.be/hcYxRVEJx7k

Cheers

Stuart

ps

You're having a giraffe about not doing well right? You logged Guatemala! MF dxers get good catches in mainland Europe. No doubting that Scotland is one of best locations for MF NA dxing though.

Who is CJYK? Do you mean CJYQ?

I missed the KKGM ID on 1630. Thanks for this tip. My reception was very poor though. I had to use maximum noise reduction to remove as much of the mush as I could - have a listen: https://www.box.com/s/a31hfbcslmmvdp1r5ir1
How did yours sound?

Regarding WJR: I see a carrier on 760 but the audio is too weak to hear. I don't know if it is WJR or something else, a Latin station for instance.

I had carriers on just about ervery frequency, most of them were just too far in the noise or below. Anything on 670 and 710 were also too weak, but I could hear something on both frequencies - not in parallel however.

This has given me a sharp reminder that I probably won't do very well with transatlantic DX due to my east coast location - certainly not as well as those further west. Ideally I would need to be on a west or north coast. My forte should be the far east but I know very little about Asiatic DX or the languages and my main interest is in the Americas.

Wow! Stunningly better than on my recording! No comparison whatsoever.

I will post another log shortly as I have found a few more IDs from earlier on in the night - you might want to check them yourself.

Don't forget there is an SDR Filesharing group at http://uk.groups.yahoo.com/group/sdr-filesharing I will make use of this soon when I have some files worth sharing from my planned DX trips to The Wash. In the meantime I could chop down a file from this location and if you want to tune my band. I presume you know about the wavchopper software for cutting down the file sizes. Not sure how many members here use the Perseus.

Cheers

Here's how Cuba was sounding at 0600 in London on 670/710 KHz - http://youtu.be/hqs8hWnt7Ic. Annoyingly 1620 had a Dutch pirate on top but was far weaker than 670/710.

Again, way above my signal levels. I can hear a second station on your recording 710 too. I had to find parts of the OM's speech and loop them on 670, 710 and 1620 to prove to myself that they were all the same stations. No ID as such was heard.

Yes, that absolutely is the ID of WTIC 1080. The pips are not. If I drive
up the street about half a mile I can see their towers on Avon mountain.
What I heard is "WTIC Newstalk 1080" but that's just part of their TOH ID.

Thanks Mark.

I just checked back through an old Sheigra DXpedition report from Dave and Alan but none of the AIR frequencies logged are audible. Probably not a meaningful list for this latitude. Nothing from them on 1566 so far.

Thanks for the link Mark.

I thought all the AIR stations were in parallel. Since I don't have an aerial for shortwave I am unable to check 5040. I have to presume I have Rajkot on 1071 as there is currently no web parallel to check and they didn't ID in English on the hour - it had faded then anyway so I could have missed it.

After reading your first post I immediately de-tuned the flag and heard what I can only describe as traditional Indian female singing with that familiar distorted vocal sound. The language also sounded distinctively "Indian" though I cannot be more specific about the language. Urdu? I used to work with a girl at BT who spoke Urdu and became quite familiar with its sound. Still there is nothing in parallel on 1566.

I have China on 1521 like a local at the moment. I will record MW tomorrow afternoon and upload a couple of SDR files. I have one I will prepare for upload in a few moment which demonstrates how strong China is on 1521.

Hi all,

I received "something" on 1071kHz at 19,50 CEST yesterday. But I dont know if it is 1071 Rajkot??

Can you help me?

I sent it to "FILES" as 1071air.mp3

Best regards Jara "Rat", Czechia

Hello Jara.

I am not a language expert but I am 100% sure that the station you heard is AIR. The language sounds like Urdu to me - a language I have heard many times as I used to work with a girl at British Telecom in their international division and I became very familiar with many words. I also think I hear the man say that this is the Urdu service at 1' 07''. The music is also distinctively Indian.

It is the same with my recording from yesterday. I did not hear an English ID, which I believe they still use on the hour, but the programme I heard could not really be from anywhere else. It is a shame their web audio stream is not working at the moment.

I don't know if we have any Indian language experts here but may I suggest that you post your recording to the Real DX group as I am sure they will be able to help you more. Their group is purely for listening to DX recordings and identifying them. The group has members all over the world and there are several language specialists. They would probably be far better helping you with the recording.

Best DX

John

1071 1759 IND All India Radio GOS, Rajkot (guj) Presumed. Indian music, ad break in Indian language. No actual ID on the hour though. 6716 km
1530 1800 STP Voice of America, Pinheira (sao) VOA. Full ID 5908 km
1590 0924 USA WARV, Warwick (RI) The Word of God from Life Changing Radio promo, then It's 15-90 AM WARV Warick - Providence ID. First appeared at 23:00 5308 km

The planetary K index shot up to 6 overnight (K7 at Boulder, 8 at College). This will probably spoil any high latiutude DX for a few days. Hopefully Latin America will get a boost.

I struggled again overnight. 1590 WARV was a surprise, received through out the night from 23:00, peaking nicely at 06:00.
https://www.box.com/s/w5v6kd93uvg364ldk8k2

I forget who the station is on 1600 which carries non-stop Latin / MoR music. Isn't this the New York station? It also peaked very well at 06:00. They never ID on the hour, or any other time it seems.

Good DX!

Hi John

Is 0924 a typo for WARV? It is the most common station on 1590 here but not there every day.

1600 is buried here by London Asian on 1602 but would say it is WUNR (MA) which is usual ss on this channel from US.

Cheers

Stuart

Whoah! It certainly is a typo! My brain cell is only half functioning today. The time should have been 06:00. Well spotted! Here on the east coast WARV will be a top DX catch. Same for VOCM, etc. It would be great to compare my reception with yours. Are you able to upload a Perseus file of 06:00 on the 7th?

Thanks for the tip re WUNR. I will try and check their web parallel next time. http://www.wunr.com/wunr.asx

hi John,

I downloaded your 1800 file from yesterday. Really interesting to see the difference in reception between there and here.

First off it seems pretty electrically quiet there, very nice!, alas those days are gone here.

I picked out the following (the Romanians are a real rarity here)

603 / 711 / 756 / 1152 / 1179 / 1530 România Actualitati
648 ex YU? sounds more Serb than Slovene to me
819 Egypt
936 Ukraine and Iran (dulcimer type music)
1017 Iran, man talking in Spanish quiet
1071 Al Nour from Syria clear id in USB at 18:00:06
1314 Antena Satelor,Romania
1350 Armenia TWR under France
1395 Armenia Golos Rossii
1467 Iran
1503 / 1512 Iran
1539 UAE, VOA Radio Aap Ki Dunyaa woman in urdu
1548 Kuwait, Sawa
1557 Taiwan, familiar WYFR tune on hour
1575 UAE Farda - massive

how about posting some recordings from a bit earlier on in the afternoon

regards

Paul

Hi Jara,
No need for Urdu experts in this case, You have a complete ID with
English station name in the end: "Yeh All India Radio ki Urdu Service hay".

Thanks Paul.

I am getting more and more excited about the potential for far eastern DX reception here. I have been posting my Perseus files to the SDR Filesharing group too and I see there have been 23 downloads of the files overnight!

To say conditions are so poor at the moment is putting it mildly. We are not even at the best time of the year for such reception.

I missed the WYFR tune too. Thanks for this.

Tim has also had a listen to the 18:00 file and spotted time signals from several oriental stations, including from South Korea and Japan. Not to mention some early TA carriers. I hear the time signals myself. This is going to get very interesting. What I don't want to do is let everybody do the DXing for me, but I won't always have much free time to get involved. Any DX loggings which result will of course be credited to the DX listener for doing the detective work and not just to me for the QTH. I think both parties need crediting jointly. That's the ethical side of it anyway (risks opening a can of worms ;O).

I am recording the band as I type but I expect the recent blow-out will wreck conditions to the far east. Time will tell and I will upload my top-of-the-hour recordings shortly. I am recording 15:00, 16:00 & 17:00.

I am surprised the band is so electrically quiet here Paul. It certainly isn't if I bring the flag any closer to the house, but I attribute this to the two home-made chokes I am using which cut down the noise quite a lot. They are simply fifteen turns of RG174 wound around two blue RS ferrite rings.

Stand by for the next files.

John

I'll paste in Tim's post to the SDR group:

i hear:
XJBS on 558, 927 (best xj, soft mx pips 12 secs late), 963, 1044,
1107, 1413, 1494
CRI on 1539

Korea on 972 & 1386

NHK-1 on 594, 612,729

Unlisted Saudi on 1476 //1521,1440,1467 etc (1khz pips)

either Japan or Korea 936 only audible on LSB

MRC 593 w/ irregular late pip
TKM het 766
730 het which is usually vancouver

3 carriers on 680 but calibration is off

Either CNR 1 has dropped the pip or we had very narrowly focused condx

Cheers

John

3053. WavChopper Error

Yahoo group: skywavesmw
Date: 2012-10-08 15:39:59 UTC
From: John Faulkner, Skegness
Topic: 3053 Message: 3053

Just when you need it.

I am trying to crop my 15:00 file but WavChopper is reporting an error:

"String was not recognised as a valid date/time"

I have not seen this before and WavChopper works fine with yesterday's files.

Does anybody know what is happening?

Thanks

John

I have tried uninstalling / reinstalling WavChopper and Perseus but to no avail.

After importing a Perseus wav file into WavChopper it doesn't even register that it is there. The file still plays OK in Perseus however.

This only happens with files created today. Yesterday's files open fine in WavChopper.

Does anybody know why WavChopper has suddenly stopped importing newer files??

Thanks

John

Working ok here John on files from yesterday and today.

Did you change recording parameters? What proggie do you use to tell Perseus to record?

It's odd. I haven't changed anything. I use the original Perseus control software, manually starting the recordings. I have never used scheduling software with Perseus.

Still a mystery. I cannot upload any more files until I have chopped them. As Perseus users know, each file is 2.34GB in size. I don't know of any file hosting site who would accept such a large file, let alone anybody who would wish to download the thing.

Cheers

John

Well, after trying everything I can think of, including doing a System Restore and re-installing all the software, WavChopper still refuses to allow me to crop the files which were recorded today. recorded today.

Thankfully, recordings made since the System Restore now open in WavChopper and it allows me to chop them too. there must have been a glitch with files recorded earlier today. I couldn't even begin to guess what went wrong.

I will make a fresh attempt with the recordings again tomorrow. Fingers crossed! :-\

Cheers

Hi John,
No, AIR stations are not in parallel. Only some programmes may be, like news in English at 1530. But 1566 kHz carries even a different channel, the National Channel. And it is a domestic transmitter, while 1071 kHz Rajkot is foreign service tx.

I'll definitely be looking out for these Paul - thanks.

Interestingly, China was not audible on 1521 this afternoon. All I heard was a weak Saudi Arabia. I think conditions must have really gone down the pan. I have received several alerts today from the SWPC and Lancashire University.

3063. Crate loop -nulling noise

Yahoo group: skywavesmw
Date: 2012-10-09 10:16:24 UTC
From: pe1etr
Topic: 3063 Message: 3063

Hello all,

Some of you with a noisy QTH might be interested in this video:

crate loop/Panasonic RF-P50

http://youtu.be/2Fub5lyBmWE
.....

I've had to abandon MW DXing with the indoor flags due to QRM.

I've been experimenting using a Tecsun AN-200 passive loop inside a crate loop (seen in the above video). The Tecsun is connected via a 48:11 balun to my Alinco DX-R8E. Results so far have been promising. I've had a couple of Asian stations using this method.
1071 IND AIR Rajkot
1521 CHN CRI Urumqi

OK. I see I have labelled the 17:00 file as "16:00". Trust me, it was definitely made at 17:00.

I am recording 18:00 too as I think I have India on 1071. Not sure where semi-local TalkSport has gone. Presumably under India/Syria.

Cheers

John

I downloaded the file and listened to it with HDSDR and found it quite interesting. It helps me know what to look for at ID time.

I don't see any problem in providing these files. I know Perseus guys will send an entire CD full of wav files to other DXers. Anyone who would take a file of this type and claim the IDs/loggings for himself would probably already have a reputation and be known to other DXers.

I'd even consider uploading a wav file from this end. I can only do 190khz max with my SDR-IQ but would easily give you a taste of what MW DXing is like on this side. I have a free box.com account and I think Box would handle the file size.

Conditions here have been auroral with Cuba, Colombia, Venezuela in during the evenings instead of Detroit, Chicago and Cleveland. Virgin 1215 just has not been in at all. 783 Mauritania has been there and a few from Spain. So far it has been a bad season for TAs here.

Hi Mike.

Great to hear your views Mike.

I'd love to hear your file. I don't know about compatibility between SDRIQ and Peruses though.

Box must be different in the US. I only have 100 MB with my free account. That's why I use Mediafire. Rapidshare used to allow up to 2GB file sizes on free uploads but it's all changed now.

What would be great here would be to have two flags which are easily reversible: One east/west and the other north/south. I am considering this in a simple, switchable or plugged arrangement ... one day soon anyway.

Cheers and thanks for sharing your views.

and here is the 17:00 file.

http://www.mediafire.com/?tfudb2szr8f1dye

The 15:00 file has a station on 756 which might be another Iranian.

I have an Arabic station which is peaks at equal levels, and even sometimes even peaks over the top of, 5 Live on 909. Of course 5 Live peaked at 17:00 but I suspect it is Saudi Arabia.

Oh my Paul! I couldn't begin to guess on some of these.

Well done on spotting Kingstown Radio Hull. That's pretty good going as Hull is about 70 miles from here by road and has to get over the Wolds.

I am also struggling with some of the stations at 18:00 which I going through now. More later but I think I will upload this too. The band is exceptionally quiet, QRN wise, at 18:00.

Thanks.

Im having fun with this - if dxing is like fishing then listening to other peoples files is like a fishing holiday.

what did you think of how loud 936 was!!

I went out looking for my dreadful noise source - seems to be in or around a bank approx 200 metres away.

yuk yuk yuk.

A bank 200m away? OUCH! How about reporting them? I know somebody who reported a company for some QRN. It was only weak, but still strong enough to block weak DX. He succeeded too and the company was forced to change it's faulty door alarm system (I think it was).

I'm having fun with this too and have IDd a few stations from 18:00, but some are a mystery. It's all quite an eye-opener!

Good grief - I see what you mean about 936! You should have heard Saudi Arabia 1521 last night at 10pm local. It was a steady S9 +10!

I am starting to hear China return to better levels at 18:00. I also hear one or two other Chinese or oriental stations at that time.

Better rejoin my other half as I have spent far too long on this today.

I will send the link for the 18:00 file in a few mins. It's nearly uploaded.

Cheers!

3101. ALA1530: Coax question

Yahoo group: skywavesmw
Date: 2012-10-11 15:15:40 UTC
From: Dave
Topic: 3101 Message: 3101

Hi All,

Thought I would get back into DX on MF and yesterday my Wellbrook ALA1530 S+ was delivered. Too wet today to try it out but hope to make a temporary setup tomorrow.

Question 1: 50 ohms RG58u coax is recommended, which I will have to buy. Has anyone tried using 75ohms double screened satellite cable instead (I have a whole reel of this!). For RX and at such low freq's would the impedence make any difference? Not having any 50 ohms coax in the house, I cannot make a comparison myself.

Question 2: Wellbrook recommend mounting the loop on a wooden pole but the pics I have seen online suggest that users mount it on steel poles. Mine will be about 2m high and I plan to use a rotator. Any opinions and suggestions about mounting would be appreciated.

Regards

Dave Small in Cannock, Staffs

3102. RE: [skywavesmw] ALA1530: Coax question

Yahoo group: skywavesmw
Date: 2012-10-11 16:05:11 UTC
From: Satnipper
Topic: 3101 Message: 3102

Hi Dave

Good questions.

My answer 1: There will be an impedance mismatch using 75 Ohm cable as opposed to 50 Ohm cable, however whether you would notice this in real-life is another matter as it's a fraction of a decibel (0.2 dB?). The 100ft transmission loss for RG58 at 1 Mhz is around 0.4 DB. I can't find a loss at 1 Mhz quoted for sat cable such as Triax Tx100 which is 1.6 dB at 5Mhz. In any case I doubt it would show on your rig's meter. I would suck it and see.

My answer 2: As long as the pole and the loop are not touching I don't see any issue. Normally the support pole will be underneath the loop as shown here - http://www.youtube.com/watch?v=CFjpTNwAW7o and as such no problem. Steel will be much more robust and less prone to maintenance issues than wood.

Regards

Stuart

Subject: [skywavesmw] ALA1530: Coax question

Hi All,

Thought I would get back into DX on MF and yesterday my Wellbrook ALA1530 S+ was delivered. Too wet today to try it out but hope to make a temporary setup tomorrow.

Question 1: 50 ohms RG58u coax is recommended, which I will have to buy. Has anyone tried using 75ohms double screened satellite cable instead (I have a whole reel of this!). For RX and at such low freq's would the impedence make any difference? Not having any 50 ohms coax in the house, I cannot make a comparison myself.

Question 2: Wellbrook recommend mounting the loop on a wooden pole but the pics I have seen online suggest that users mount it on steel poles. Mine will be about 2m high and I plan to use a rotator. Any opinions and suggestions about mounting would be appreciated.

Regards

Dave Small in Cannock, Staffs

From: Satnipper
Topic: 3101 Message: 3103

Looking at http://www.w4rp.com/ref/coax.html RG6 is close to good quality sat coax and I would say the impedance mismatch would be cancelled by the lower attenuation at 1Mhz.

If we have good NA conditions and you get CJYQ on 930 KHz at around 2300 UTC it is working ok - if conditions are poor try 1630 KHz for Diagonal from La Plata Argentina which was making it into London after 0000 last night. About the only TA held - very poor NA MF conditions last few days. Diagonal is becoming a bit of a regular at the moment.

Regards

Stuart

Hi Dave,
I run both my Wellbrooks on 75ohm CCTV BNC to BNC cables, I wouldn't get to rapped in db losses, I've also used 75Ohm, and couldn't tell any difference,and thats running a 50metre length.

11-10-12 18:00 = http://www.mediafire.com/?giwd7xee1axs0ap
```

Unfortunately my noise levels are up slightly today - the highest I have known since reinstating the flag this season. At least it is only affecting a few frequencies at the top of the band.

Hopefully something interesting to listen to above.

Best DX!

John

Topic: 3101 Message: 3109

Thanks to everyone for the info & help. I have been trying the loop today, firstly using some 50ohm coax of dubious quality which I found in the loft, then with quite stiff satellite cable, and finally with bulk standard 75ohm coax. I had very similar results with both lengths (approx 17m) of 75ohm, but the 50ohm cable performed poorly with more noise and weaker signals. Sandpiper have a 50m roll of GR58u at a reasonable price and while ordering a rotator from them I might get the cable also, then I can make a further comparison. It's useful to keep some cable in the house anyway.

I found that local noise is at it's least with the loop about 15m from the house, and it's away from the trees and shrubbery there. The main source of qrm by the way, is from our own plasma TV. I read that Panasonic's are noted for this when they have been used for some time. Thankfully my mother goes to bed early then it can be turned off. Even with the TV on I could hear quite weak signals that were totally under the noise on the longwire, so, yes, I am impresssed with the loop so far.

As for the mounting, I was thinking of fibreglass pole for the upper rotator, and a metal pole for the lower part into the ground.

I will post again when I have "final" coax resutls.

Regards

Dave Small

From: John Faulkner, Skegness
Topic: 3110 Message: 3110

I listened at 15:00 today and did not hear the four time pips on 1593, but heard six pips instead and then an ID which sounded like "Radio __?__ Transylvania".

Another mystery is "Caroline Radio" on 1386. Can this really be the Swansea station?

Cheers

John

Thanks Paul and Mauno.

Yes, the Sudan ID is almost crystal clear. I hear Radio Devin too but it was the station underneath which was of more interest.

The tuning was adjusted as Sudan is off frequency. Same for the station on 1098 so I was trying to get the tuning right for the mystery station at the expense of the known station.

I haven't been able to save the corrected calibration of the Perseus as per the YouTube videos and the instruction manual. Each time I restart Perseus it needs calibrating again. I thought that once it was calibrated then it remained calibrated.

Topic: 587 Message: 3133

Still very poor on the transatlantic path, but no wonder after such sustained levels of high geomagnetic activity. Nothing is going to improve in a hurry if the sun keeps doing this to us.

I had Perseus recording overnight but struggled to hear anything. There was very weak audio on 940 1190 1290 1510 1590 1620 & 1630. The only signals riding above the noise were a presumed RCN from Colombia on 980 at 01:00, seemingly in parallel with their web stream and a presumed Caribbean Beacon on 1610 with gospel at 04:00.

Despite all this geomagnetic activity, there is still no sustained activity on 10m. It's all been very patchy. I had a few brief sessions over the weekend and managed to work some sporadic E into Finland, Sweden and the Aaland Islands. Spain and Ukraine were also coming through via Es, together with some short F2 - I worked Crete, a new Entity for me, plus I heard Cyprus, Bahrain and The Canaries around that time. I heard a couple of Brazilians in the late afternoon and that was that.

Cheers

John

Yes, it should. I don't understand what the reason might be for that, at least after some warm-up. I suppose you don't click CalClr after calibration by any chance?

That would agree with my reading. I measure 1295.980 after calibration
(which seems to be holding well at the moment).

Cheers

3138. Perseus or WavChopper Problem

Yahoo group: skywavesmw
Date: 2012-10-15 17:11:43 UTC
From: John Faulkner, Skegness
Topic: 3138 Message: 3138

I am unable to post any more Perseus files until I solve a problem. I already posted about this a few days ago and the problem seems to be recurring.

To save re-typing, I will paste the message I sent to the Perseus SDR Group. Posting this again in the hope something useful will come from this if others have the same problem.

I am trying to get my head around a problem which has recurred when trying to chop a file with WavChopper, though I am unsure whether the problem lies with WavChopper or Perseus.

I use WavChopper v3.0 and Perseus v4.0b.

WavChopper suddenly stops working and refuses to import the latest Perseus files, however, it is still imports Perseus files from previous dates.

I tried uninstalling and reinstalling both WavChopper and the Perseus driver but it makes no difference as all new Perseus files will not open up in WavChopper.

The solution is to use System Restore (I run Windows 7 Pro 64 bit). Then new Perseus files will open in WavChopper, however, those which didn't open before running System Restore still won't open.

Even weirder today: This problem has arisen again, so I firstly uninstalled and reinstalled WavChopper and Perseus, but this time the problem files suddenly DID import, but there was a new problem: The record time stated in both WavChopper and Perseus is suddenly two and a half hours ahead of the actual record time. If I then crop the file in WavChopper, taking note that the time is now being reported as two and a half hours in the future, I crop the file accordingly and the time in resulting file had jumped forwards by another minute or so.

It is complicated to explain but I hope the above makes sense. At least if I explain everything that has happened I hope it might point to the problem.

Thanks if anybody can throw up a solution to this, otherwise I will have try reverting to an earlier version of Perseus or WavChopper.

John

John

Perseus version 4.0c and Wavchopper 3.0 are working 100% for me - try using V4.0c http://microtelecom.it/perseus/Perseusv40c_beta.zip

Also - what anti-virus are you running? Try disabling it and seeing if problem files start working.

Also also - what Windows updates have you installed in last few days - Windows Update screen will give you this information.

Regards

Stuart

Thanks Stuart.

I am running Microsoft Security Essentials so the virus side of the computer is covered.

There have been quite a few Windows updates lately and I wondered if these might have had something to do with it. When I did the System Restore I was aware that I would need to re-install the updates again. The failure has coincided with the updates again but whether this is the problem ...

Going to give Perseus v4.0c a try now.

Running Perseus v4.0c I get a message asking me to run mttps protocols. What is this and should I allow it? I cancelled it to begin with as I do not know what it is and Perseus crashed. I seem to be having better luck the second time though.

Yes - that has solved the problem. Hopefully this will now work 100%.

I can open newly recorded files and the older files, but the ones from earlier still won't open.

Thanks Stuart. I owe you a beer or two!

I tried uninstalling and reinstalling both WavChopper and the Perseus driver but it makes no difference as all new Perseus files will not open up in WavChopper.

The solution is to use System Restore (I run Windows 7 Pro 64 bit). Then new Perseus files will open in WavChopper, however, those which didn't open before running System Restore still won't open.

Even weirder today: This problem has arisen again, so I firstly uninstalled and reinstalled WavChopper and Perseus, but this time the problem files suddenly DID import, but there was a new problem: The record time stated in both WavChopper and Perseus is suddenly two and a half hours ahead of the actual record time. If I then crop the file in WavChopper, taking note that the time is now being reported as two and a half hours in the future, I crop the file accordingly and the time in resulting file had jumped forwards by another minute or so.

It is complicated to explain but I hope the above makes sense. At least if I explain everything that has happened I hope it might point to the problem.

Thanks if anybody can throw up a solution to this, otherwise I will have try reverting to an earlier version of Perseus or WavChopper.

John

That's good!

I'm inclined to think it is the updates as running system restore uninstalls the updates since the restore point. However 4.0c may be more robust to whatever the underlying issue is.

Cheers

Yes - that has solved the problem. Hopefully this will now work 100%.

I can open newly recorded files and the older files, but the ones from earlier still won't open.

Thanks Stuart. I owe you a beer or two!

Perseus version 4.0c and Wavchopper 3.0 are working 100% for me - try using V4.0c http://microtelecom.it/perseus/Perseusv40c_beta.zip

Also - what anti-virus are you running? Try disabling it and seeing if problem files start working.

Also also - what Windows updates have you installed in last few days - Windows Update screen will give you this information.

Regards

Stuart

Subject: [skywavesmw] Perseus or WavChopper Problem

I am unable to post any more Perseus files until I solve a problem. I already posted about this a few days ago and the problem seems to be recurring.

To save re-typing, I will paste the message I sent to the Perseus SDR Group. Posting this again in the hope something useful will come from this if others have the same problem.

I am trying to get my head around a problem which has recurred when trying to chop a file with WavChopper, though I am unsure whether the problem lies with WavChopper or Perseus.

I use WavChopper v3.0 and Perseus v4.0b.

WavChopper suddenly stops working and refuses to import the latest Perseus files, however, it is still imports Perseus files from previous dates.

I tried uninstalling and reinstalling both WavChopper and the Perseus driver but it makes no difference as all new Perseus files will not open up in WavChopper.

The solution is to use System Restore (I run Windows 7 Pro 64 bit). Then new Perseus files will open in WavChopper, however, those which didn't open before running System Restore still won't open.

Yes - 4.0c is a unofficial beta release - there are some minor issues but I have been running it since it came out (month ago?) and it is fine. Mainly contains enhancements to the server.

Talking of which the server network is quite straight forward but you do need to forward a couple of ports on your router for both udp and tcp if you are using a router. You need to forward a port to listen to other servers and also to run your own server. If you are running your own server you can't use your client directly but can connect to your own server! If you don't use a router I don't think you need to forward ports.

Have a bash - if you get a problem drop me a direct email. It is interesting to connect to a US server!

Cheers

I ought to do this but I know nothing about opening up ports having never done anything like this before. This is one for the near future I think. What might be a problem is the ADSL2 connection speed. It was up to 16 MB but is typically less than half that lately. We have a Sky modem and no separate router.

Current speeds are:

Ping: 119 ms
Download: 6.07 Mbps
Upload: 0.77 Mbps

Cheers

Well d/l speed is fine for listening to remote servers. When you set up your own server you should choose adsl mode which needs minimum of 250 k so you should be ok there as well. There is a gprs mode which requires less bandwidth still. One tip for slow connections is to use 125 Khz bandwidth on Perseus as opposed to 2 Mb say.

You need to know your router brand and model number, admin login and password. Then just google your model and "port forwarding" - lots of examples out there.

Once you have forwarded the two ports you set-up your Perseus client to connect to remote servers and set-up your Perseus server so other dudes can connect to you.

If you know what you're doing it takes around 10 minutes all told though obviously it will be longer if you have never PF'ed before. I helped several of the lads out when the Server release was first made - year or two back.

Cheers

Perseus version 4.0c and Wavchopper 3.0 are working 100% for me - try using V4.0c http://microtelecom.it/perseus/Perseusv40c_beta.zip

Also - what anti-virus are you running? Try disabling it and seeing if problem files start working.

Also also - what Windows updates have you installed in last few days - Windows Update screen will give you this information.

Regards

Stuart

Subject: [skywavesmw] Perseus or WavChopper Problem

I am unable to post any more Perseus files until I solve a problem. I already posted about this a few days ago and the problem seems to be recurring.

To save re-typing, I will paste the message I sent to the Perseus SDR Group. Posting this again in the hope something useful will come from this if others have the same problem.

I am trying to get my head around a problem which has recurred when trying to chop a file with WavChopper, though I am unsure whether the problem lies with WavChopper or Perseus.

I use WavChopper v3.0 and Perseus v4.0b.

WavChopper suddenly stops working and refuses to import the latest Perseus files, however, it is still imports Perseus files from previous dates.

I tried uninstalling and reinstalling both WavChopper and the Perseus driver but it makes no difference as all new Perseus files will not open up in WavChopper.

The solution is to use System Restore (I run Windows 7 Pro 64 bit). Then new Perseus files will open in WavChopper, however, those which didn't open before running System Restore still won't open.

Even weirder today: This problem has arisen again, so I firstly uninstalled and reinstalled WavChopper and Perseus, but this time the problem files suddenly DID import, but there was a new problem: The record time stated in both WavChopper and Perseus is suddenly two and a half hours ahead of the actual record time. If I then crop the file in WavChopper, taking note that the time is now being reported as two and a half hours in the future, I crop the file accordingly and the time in resulting file had jumped forwards by another minute or so.

It is complicated to explain but I hope the above makes sense. At least if I explain everything that has happened I hope it might point to the problem.

Thanks if anybody can throw up a solution to this, otherwise I will have try reverting to an earlier version of Perseus or WavChopper.

John

All at carrier level here David, except 1240 which is buried under
Virgin 1242.

Quite a few TA carriers elsewhere, but that's all they are - carriers.
No audio.

Good DX!

Well d/l speed is fine for listening to remote servers. When you set up your
own server you should choose adsl mode which needs minimum of 250 k so you
should be ok there as well. There is a gprs mode which requires less
bandwidth still. One tip for slow connections is to use 125 Khz bandwidth on
Perseus as opposed to 2 Mb say.

You need to know your router brand and model number, admin login and
password. Then just google your model and "port forwarding" - lots of
examples out there.

Once you have forwarded the two ports you set-up your Perseus client to
connect to remote servers and set-up your Perseus server so other dudes can
connect to you.

If you know what you're doing it takes around 10 minutes all told though
obviously it will be longer if you have never PF'ed before. I helped several
of the lads out when the Server release was first made - year or two back.

Cheers

Stuart

I ought to do this but I know nothing about opening up ports having never
done anything like this before. This is one for the near future I think.
What might be a problem is the ADSL2 connection speed. It was up to 16 MB

but is typically less than half that lately. We have a Sky modem and no separate router.

Current speeds are:

Ping: 119 ms
Download: 6.07 Mbps
Upload: 0.77 Mbps

Talking of which the server network is quite straight forward but you do need to forward a couple of ports on your router for both udp and tcp if you are using a router. You need to forward a port to listen to other servers and also to run your own server. If you are running your own server you can't use your client directly but can connect to your own server! If you don't use a router I don't think you need to forward ports.

Have a bash - if you get a problem drop me a direct email. It is interesting to connect to a US server!

Cheers

Thanks Stuart.

I am running Microsoft Security Essentials so the virus side of the computer is covered.

There have been quite a few Windows updates lately and I wondered if these might have had something to do with it. When I did the System Restore I was aware that I would need to re-install the updates again. The failure has coincided with the updates again but whether this is the problem ...

Going to give Perseus v4.0c a try now.

Hi Bob,

I have a whole roll of good quality RG6u so I will be using that. My project is on hold at the moment while I wait for various things to be delivered so I can make a semi permanent installation. Would you believe no store in the UK has the Hy Gain AR303 rotator in stock and I don't want to use a Conrad rotator, so it will be a while before I am fully operational with the loop.

Regards, Dave in Cannock.

PS: I was in Bembridge a few weeks ago, but only to take a photo of the windmill!

That would be RFA, not RTI, between 1900-2200. But I think ID is needed, because for example on Saturday at 2100 I have very strong CNR1 on the frequency. Could that be via Golmud 1000 kW, ex-1134 kHz as listed on Asiawaves?

3163. 550 kHz UNID German Language Station Heard in Colorado

Yahoo group: skywavesmw
Date: 2012-10-16 14:19:20 UTC
From: kugellagers
Topic: 3163 Message: 3163

I was taking advantage of auroral conditions and the IBOC being off (for good Hopefully) on local 560 KLZ and was litening to 550 kHz and grabbing all the stations I Could. I added KBOW, KFYI and KTRS to my logs last night and heard a 4th station I could not figure out.

Please listen to the file I uploaded to the files section of our group here:

http://f1.grp.yahoofs.com/v1/YGh9UNF-0zqHjD3-90xtr4pHEx1djVs9APVra6JkBdpMtrZJF5FBjboQ48zOOTyWv3YDAKwFIFei92ykj3TNmf6OYY7JD2nOOhM/Temporary%20clips/550_UNID_2012-10-16_501_UTC_Clean_Clip.mp3

I cannot figure out what I am hearing but am pretty sure it is German that is being spoken. There is a song that ends at the start at about 00:24 seconds and what I think is German language from about 00:25 until about 1:08 and what sounds like either a program or station jingle. Then a country song in German language is played followed by an english N American station fading in with what I think is an ID of KOAC over the top. The German language station faintly begins another song underneath I believe. I heard this station fade in several times during the evening but not as well as this clip. The two stations in Germany on 549 kHz were playing news at the time so I am sure these are not it.

I have not, as of yet, found any North American stations on 550 kHz that re-broadcasts in German. Maybe someone here can hear it well enough to translate the audio or recognize the station.

Thanks,

John

> I cannot figure out what I am hearing but am pretty sure it is German that is being spoken. There is a song that ends at the start at about 00:24 seconds and what I think is German language from about 00:25 until about 1:08 and what sounds like either a program or station jingle. Then a country song in German language is played followed by an english N American station fading in with what I think is an ID of KOAC over the top. The German language station faintly begins another song underneath I believe. I heard this station fade in several times during the evening but not as well as this clip. The two stations in

Germany on 549 kHz were playing news at the time so I am sure these are not it.

1600 Mark.

Did you know you can use Perseus v4.0b (and I presume v4.0c) for one month without needing to have a Perseus receiver plugged in?

3168. Re: 75 ohm satelite cable and rotators

Yahoo group: skywavesmw
Date: 2012-10-16 18:28:36 UTC
From: bob.blodge@btopenworld.com
Topic: 3101 Message: 3168

Hi Dave,

If you have already received my message like this, I'm sorry to repeat it !

Unfortunately my email program is doing a few odd things lately.

For your rotator, have you tried Walter and Stanton, Moonraker and Martin Lynch

and Sons ?

What is special about the one you are looking for ?

Bembridge Windmill is practically in my garden ! Sometime ago I was having a

curious regular variation in the signal (from I have forgotten where) that I was

interested in. The problem turned out to be caused by the fact that the windmill

was actually rotating !

I phoned the National Trust and they said that it had already been reported and

a team of fitters was on the way. The rotation was in spite of the sails being now

just the wooden frames !

I am lucky to be on a good, high (though windy) site !

All the Best

Bob

Bob,
You brought back memories of walking from the windmill on the path across the airfield with it's notices about getting run over by aircraft hi!
Do you ever hear the Bembridge beacon, call IW on 426 khz, one I have yet to hear up in Cheshire.
Regards,
72, Brian, GØNSL.

...R. Farda!

Hello all,

I only seem to get one MW DX station at the minute, or should I call it a local?

1575kHz R. Farda Al Dhabiya 800kW 5722 km/3552 miles

This station is received daily in Blackpool UK, from local dusk onwards (with fade outs)
1575kHz UAE R. Farda 800kW 5715 km/3556 miles

It was in and out for several hours yesterday evening 16th Oct.

Topic: 3101 Message: 3176

Hi Bob,

Yes, I have tried all of them for the rotator, plus Radioworld and Haydon, except for Martin Lynch because they don't list it on their site.

There is nothing special about the AR303x, except that from what I have read online it does not have the synch issues that the Conrad rotator has. I don't know of any more inexpensive rotators. The old Altai ones that you could buy at any rally for £49 seem to be extinct now. They were not very reliable either, but they were cheap.

Once my parasol base is delivered I should be able to use some existing metal pole to fix to the loop, then I can install the rotator later. Laying the cable will be the big job since it has to go over the garage roof and all the way to the front of the house.

I first saw the Bembridge windmill back in 1990 It was looking somewhat faded back then and had a broken sail. To get a photo I had to climb over a wire fence. At least now there is a gate!

Interesting about your reception problem. I wouldn't have thought the sails turning would have any effect on MF, since they are not all that solid, but I suppose if you are close enough they would.

73, Dave.

Hi Brian,

I used to hear IW quite frequently but it was never permanently on.

I knew the man who looked after all the radio equipment at the airfield

and the beacon was one of his responsibilities. I have not seen him

for some time and I think he has now resigned.

Regards

Bob (used to be G0UEZ)

Just a heads ups, conditions are starting to improve again, had a weak return of WBBR 1130Khz, a very weak and peaky WCNZ 1660Khz on last nights DCC recordings, tha action seemed to be best at 01.00utc,then complete fade out until 04.00utc for very weak signals.

Let hope things improve for the weekend!

3181. The Wash DX Trip Test - 15:00 & 16:00

Yahoo group: skywavesmw
Date: 2012-10-19 20:00:48 UTC
From: John Faulkner, Skegness
Topic: 3181 Message: 3181

19-10-12: 1500:
http://www.mediafire.com/?jb2q877y67joq7r

19-10-12: 1600:
http://www.mediafire.com/?qx94g9233waggwo

I managed to run out a NE Beverage alongside an area of The Wash not far from here. I was hoping to hear some respectable signal strengths from the far east, but I didn't expect to hear quite so many of them and with such listenable quality. Conditions today are hardly the best. I couldn't even hear my usual China on 1521 on the car radio - and it wasn't that well received on the beverage, yet there were so many other Oriental stations coming in and not just at 'time signal' level.

Quite simply, I had very little time and had to bodge a wire together. I used about 50m of RG58 feeder, grounded at the far end, three chokes to suppress possible interference (no apparent signal loss resulted) and 300 metres of wire draped on the ground and terminated directly to earth at the far end (no time to find a suitable resistor unfortunately). This was basically a trial run as I hadn't found the tme to solder any of the connections and there were four joins in the beverage wire, all with twisted wire and self-amalgamating tape. Bodgitt & Scarper methods abound!

The result was an exceptionally quiet MW band and an antenna which offered a very good null to signals coming in from other directions. Background noise levels were down to approximately -135 dB.

Please note however that the (old) laptop I used was showing the wrong time and had advanced by about 12 minutes, so please disregard the times stated in the Perseus display. The start and end times of each file are 15 seconds before and after the top of the hours (15:00 & 16:00) respectively.

I would recommend you download the 16:00 file first as it has better signals from the far east. The 15:00 file has less European interference so there may be more signals from the far east, though slightly weaker. I have more Perseus files from either side of 16:00 with better signals from other stations. There were other Chinese stations for instance that had faded on the hour. 801 kHz is one which comes to mind.

How many Chinese stations can you hear on 981?

I wonder what good conditions would bring!

John

I am really curious to know how other people did on MW overnight. I don't think it is worth the effort here to go for transatlantic DX. I probably ought to reverse the flag and concentrate on signals from the east.

Conditions deteriorated as the night went on. By 04:00 to 06:00 I was only left with weak, scratchy signals from the most regular of regulars. 930 CJYQ, 1010 CFRB, 1280 WUNO, 1290 YVLF, 1510 WUFC, 1520 WWKB, 1590 WARV, 1620 WDHP, 1630 ARG & 1660 WGIT. Only one interesting station materialised: A Spanish talker on 1230 which actually peaked to fair levels around 04:30. Absolute Splatter (that ought to be the station's name) makes frequencies around this part of the band near impossible.

I am really curious to know how other people did on MW overnight. I don't think it is worth the effort here to go for transatlantic DX. I probably ought to reverse the flag and concentrate on signals from the east.

Conditions deteriorated as the night went on. By 04:00 to 06:00 I was only left with weak, scratchy signals from the most regular of regulars. 930 CJYQ, 1010 CFRB, 1280 WUNO, 1290 YVLF, 1510 WUFC, 1520 WWKB, 1590 WARV, 1620 WDHP, 1630 ARG & 1660 WGIT. Only one interesting station materialised: A Spanish talker on 1230 which actually peaked to fair levels around 04:30. Absolute Splatter (that ought to be the station's name) makes frequencies around this part of the band near impossible.

3205. The Wash DX Trip: 22-10-12

Yahoo group: skywavesmw
Date: 2012-10-22 20:22:48 UTC
From: John Faulkner, Skegness
Topic: 3205 Message: 3205

I took another trip to the marshlands of The Wash - my second in two days! I actually went there yesterday but everything imaginable went wrong: My mains inverter blew up; There was strong noise across the band; I'd left some adapters at home so I couldn't use the filters; When I was finally set up I was just about to record the top of the hour and a nice farm worker came up to me for a chat - just before the hour and I missed it. I had found a spot which was 'private' and so he told me not to return again. He was very pleasant and we spoke about radio for a while. Then he tried to sell me a NATO 2000!!! The farm worker I met the other week seemed fine with my presence on private land and said the farmer would not have any problem with me running out wires across the edge of his fields. Some you win and some you don't.

Today I decided to visit a more public spot, determined that I was not going to be moved on again. It was very quiet and peaceful. Not a dog walker in sight, but I was plagued by fog at times. I had more noise than when I tried my test trip last week. The mains inverter seems to have become slightly noisy and I also found that the PSU for the laptop started wrecking the bottom of MW. It didn't last time. When I drealised it was the laptop psu I just ran on battery, but not until recording today's 1600 file. What was rather annoying today was the wire kept knotting up while I ran it out across the ground.

Conditions were not as good as on the 19th, surprising with the indices being lower and more stable than then. Maybe I've missed something. I've had a quick tune around and made the notes below, but Urumqi on 1521 was audible very clearly before 1330, that's nice and early for the time of year. Thailand on 1593 was booming in shortly afterwards and was stronger than Urumqi at times.

I tried tuning the 200 ohm resistor at the far end of the beverage this time, taking notes of any nulling effects, but it made no difference at all. I have no idea why.

I also corrected my clock this time, but that didn't stop it gaining three seconds since yesterday.

From: Damien
Topic: 3207 Message: 3207

Hi All,
Due to my cloth ears, can anyone give this a listen from last night on 1030KHZ it's a W ID, but it's spoken to fast for me, they also mention 96.7FM if that helps, and a little later on I think there is another ID.

Conditions where a big improvement last night, with Radio Disney WEQW 1560,WWKB 1510,WWZN 1510,1130 WBBR, coming in pretty strong.

Anyway..hope someone can help..Thanks in Advance chaps

Phone numbers...
"254-1030, 888-WBZ-1030" (announcer says "triple 8")

Prefix 888 is a toll-free number in the US. Definitely WBZ.
I don't think that's 96.7 but something else. It doesn't matter, though.

Hi Mark,
I've always found it good for short periods, the downside is QRM on lower frequencies,it can be really bad,eg PSU etc. And there isn't a vast amount of TX's,europe,russia,perhaps northern africa (I guessing Now lol)
Listening for Beacons can be good fun,as there are loads of TX's.

I'm sure there are quite a few members into it, probably best just to give it a go, I tend to do so, when I get tired of the usual MW HF side of things.

If you like only broadcast there is plenty info on the net, also there are NDB beacons just above the broadcast stations.
This could be very interesting because now that the evenings getting longer and darker there are lots to hear, and almost every day you hear other beacons.

Antenna could be a problem, but try to find some info on the net about the miniwhip from Roelof PA0RDT.
I did some time NDB DXing and tried many antennas, but the miniwhip was the best!
Roelof build those antenna for many people and he is not expensive.

I have just been informed that 1540 WDCD is no longer on MW. I'm sure that's what it sounded like when I heard it. At first I heard something sounding like Life Radio at 04:00 and then several frequencies being mentioned on a network, one of which sounded like 15-40 WDCD, the ID being clearer at 03:00 I was fighting against the splatter in a very narrow bandwidth so what I heard was very distorted.

Can supply a recording if anybody is interested.

Also I see I did not amend the times in the last three logs - they should all be 03:00.

Now where's the egg removal tool? (I'm going back to bed)

After my poor overnight transatlantic DXing session I thought I would try my have on 10m again. Conditions have been good at the top of HF over the weekend and I set up a very simple half wave wire dipole at only 2m above the ground for some simple QRP DXing. Using just 10 watts I was able to work the following, and with great ease!

Conditions did not extend quite so far west as they did yesterday when I heard Arizona and Minnesota on 10m. They were not too strong and I was not able to break through the resulting pile-ups . I am determined I am not going to increase my power to work them though. I am really enjoying QRP.

https://www.box.com/s/7howknpxl8yet8xm7asr

This is a recording of what I thought was WDCD, heard at 03:00 this morning. There was an automatic assumption that this was WDCD as I heard a muffled ID which sounded like that. On closer listening I wonder if I have KXEL?

5 seconds "15-40 WDCD" ID? Or is this "15-40 KXEL" ? This is so muffled I am now hearing things and need somebody to make sense of this for me.

18 seconds: "You've been listening to programmes provided by ... Studios"

Thanks if anybody can help.

John

3225. 1520 WWKB with full ID + data decode (BPSK) in SW.

3226. 1130 WBBR NY with California commercials?

Yahoo group: skywavesmw
Date: 2012-10-29 10:32:23 UTC
From: pe1etr
Topic: 3226 Message: 3226

Hello all,

Yesterday (28-10-2012) I received a station on 1130, which I had assumed was WBBR, however a commercial I heard gave a "310" area code, which I have found to be in California. Any comments?

Hi John,
At 20 seconds in, I make it KXEL as the ID, at least to my ears. I managed to get it last night at 06.52 UTC, IDing as "Red Eye Radio",this is a 1st for myself, and I have to say 1540Khz is a bit of a nightmare channel, as not alot peaks, you normally have 2 others mixing in as well. This year I've managed ZNS-1 and CHIN Toronto on 1540, so it's a real lottery.

Congrats on the log John

Click below for my KXEL this morning

KXEL 1540 29 OCT2012 06.52UTC

Hi Pete,
If I was a betting man, I would say it was WBBR, as the signal is so strong. What time was the commericial ? As I have 28th October recordings,so I could playback and check it out for you.

From: John Faulkner, Skegness
Topic: 3224 Message: 3229

Hi Damien.

Thanks for listening. I don't hear the KXEL ID at 20 seconds but I hear what could be a mention of Red Eye Radio. The ID "14-40 KXEL" seems conclusive enough at five seconds, especially as I can hear a mention of Iowa afterwards. Something like "15-40 KXEL, Iowa's ... " etc.

I recorded overnight again but haven't listened through yet. I quickly listened at 06:52 as per your log. I hear English news in a British English accent. There is a second station which gradually peaks underneath with a weak ID, presumed CHIN. Then the dominant station peaks with a Red Eye Radio ID at 06:54:09, followed by another possible ID of the weaker station at 06:54:28.

Recording: https://www.box.com/s/hrf6p5x8gyh05maoz6c9

Looks like this is definitely KXEL as their website says they carry Red Eye Radio. Cannot believe I thought this was WDCD.

Thanks for your help Damien.

John

0:40: "This is (presenter's name?) on Radio Eight Hundred on your radio dial in St Johns"

1:13 "This is VOWR ..... in St Johns"

Well done on catching the call letters, they seldom give these out from memory.

I have been trying to hear this myself but 800 had the Latin talker dominant here.

I will post my loggings soon so maybe you would like to cross-reference.

John

3232. Skegness Log: 29-10-12

Yahoo group: skywavesmw
Date: 2012-10-29 14:47:26 UTC
From: John Faulkner, Skegness
Topic: 3232 Message: 3232

950 0400 CAN CKNB, Campbellton (NB) ... your station, 95 CKNB 20 seconds past the hour. Fair peaks 4583 km
1310 0400 USA WLOB, Portland (ME) WLOB ID mentioning Hartford, etc. 5099 km
710 0500 USA WOR, New York/Lyndhurst [NJ] (NY) 7-10 WOR ID at top of hour 5542 km
540 0600 CAN CBT CBC Radio 1, Grand Falls (NL) CBC Radio News jingle 3837 km
600 0600 CAN CBNA CBC Radio 1, Saint Anthony (NL) CBC News jingle, desparately weak in noise 3714 km
1540 0654 USA KXEL, Waterloo (D) (IA) Red Eye Radio IDs. Stronger than Europs on 1539 6546 km
640 0700 CAN CBN CBC Radio 1, Saint John's (NL) CBC News ID and jingle 3731 km
1650 1425 CAN CJRS Radio Shalom, Montr?al (QC) 16-50 AM Radio Shalom ID 5186 km

Much better conditions but so many 'nearly rans' this time. Virtually all my transatlantic DX suffers from enormous Euro-splatter. There never seems to be much of a dawn window either as I am further east than most MW DXers in the UK.

The forecast is for unsettled to minor storm conditions 30th/31st.

Hello all,

I've put the 1130 suspected WBBR and another unid on 1010 together in one video. (I think I here "CBC" on 1010)

Two TA unids received in Blackpool UK early morning 28-10-2012
Alinco DX-R8E (I/Q mode) and indoor flag antenna.

http://youtu.be/Af5quyawJf4

I also had 1580 in at the same time playing Elton John "Philadelphia Freedom". (1520 WWKB was also in with an ID)

Thanks John,
For the life of me, I just can't understand whats he saying, anyway glad to have got another 1st here, this stations been haunting me for some time now.

If I can help with and cross refrence great, I tend to hang on 3 of 4 days of recordings before ditching,unless like they have been of late pretty poor, I ditch them. As it stands, I've got the 28th & 29th, and of course i will be recording tonights.

Interesting point Mark. You can guarantee a lot of stations which usually go off air at night or reduce power will stay on longer.

Conditions aren't too bad at the moment either so there could be one or two interesting surprises thrown up tonight.

We're thinking of you tonight. Please stay safe.

The usual transatlantic on here is CKDO from Oshawa ON. CKDO have an oldies format.

A quick listen to my files: I hear a mention of Oshawa in a commercial at 06:42:26. Then the song How Deep Is Your Love from the Bee Gees. Then straight into the next song, a kind of blues song, which I don't recognise but it's not Philadelphia Freedom, though it does sound like Elton John. This fades at 06:48 when a softly spoken (Spanish?) YL talker takes over.

Sorry Damien, my sound card had crashed (as it does every morning after recording with Perseus).

I hear what sounds like "doble v oo en air" at the beginning of your recording. This repeats after the time pips. I am pretty sure this is WUNR Brookline (West Boston) MA. They are listed with Spanish and ethnic programming. Perhaps somebody could confirm what I am hearing.

Cheers

John

Sorry, I think that should be Peter, not Damien.

Congrats on CKDO.

John

3249. 1350Khz Middle East ?

Yahoo group: skywavesmw
Date: 2012-10-30 19:33:50 UTC
From: Damien
Topic: 3249 Message: 3249

Hi All,
This is probably a simple one for you guys out there, while checking out 1350Khz I heard a strong middle eastern sounding TX, any clues on where this may be from?

Regards
Damien

Thanks John,
1600Khz is a hard one, as this stations just seems to play back to back mx, with no ID's.
Thanks Again!

Hi Damien

Possibly ERTU, Al Quseir, Egypt or Radio Orient in France

Mark

3252. Very Good Medium Wave Conditions

Yahoo group: skywavesmw
Date: 2012-10-30 23:27:40 UTC
From: John Faulkner, Skegness
Topic: 3252 Message: 3252

I was surprised at how the band opened up across the Atlantic overnight. I haven't been able to type up my log as MW List has been down this evening.

Conditions as I type are not far short of spectacular with normally dormant TA channels revealing audio. 1300, 1460 and 1490 are three which immediately come to mind. 1300 and 1490 are English speakers, 1300 being a phone in. 1460 has pop music.

Good DX!

John

3253. Re: [skywavesmw] 1350Khz Middle East ?

Hi Damien.

While you could have heard Egypt here or something else more exotic, always remember Radio Orient is on here from Nice. They carry Asian programming which I think catches us all out sooner or later.

1580 CKDO is blasting through here at the moment. Another rarity coming through at the moment is CJOY 1460, another oldies station. You can hear this in parallel to its web stream.

Good DX!

John

920 0400 USA KDHL Faribault (MN) ID "KDHL Faribault, a Cumulus Station" then ABC News 6437 km
620 0600 CAN CKCM Grand Falls (NL) Pops, as 590, 710, etc. 3839 km
650 0600 CAN CKGA Gander (NL) Pops, as 590 & 620, etc. 3775 km
710 0600 CAN CKVO Clarenville (NL) Pops and VOCM IDs, as 590, etc. Mixing WOR 3774 km
770 0600 USA WABC New York/Lodi [NJ] (NY) Splattered ID Where New York .... Fifty Thousand Watts ... Your 24 Hour ... Obviously WABC 5535 km
1580 0642 CAN CKDO Oshawa (ON) Mention of Oshawa in ad break. Non-stop oldies 5612 km
1040 0700 USA WHO Des Moines/Mitchellville (IA) WHO ID heard and mention of Newsradio Ten Forty 6648 km
1600 0700 USA WUNR Brookline (MA) Spanish ID at top of hour 5251 km
1460 2331 CAN CJOY Guelph (ON) Pops, as web stream 5731 km
1570 2352 CAN CJLV Radio Laval 1570, Laval (QC) French song, as web stream 5194 km

Maybe transatlantic MW DXing isn't too bad from here after all.

I was really surprised to catch KDHL on 920. They were never known to use their call letters last time I heard them two or three years ago. 1040 WHO was another nice surprise.

The band was full of TA carriers overnight, many producing audio though not all making much headway through the Eurosplash. Here is a list of other stations heard but not IDd.

0300:
610 OM English talk
1000 English talk
1070 Radio Santa Fe, Colombia. ID

0500:
570 English ID
610 English ID
660 English ID
760 Vague English voice
820 "The following programme has been made possible by ... "
1250 Vague English OM
1280 Soft pops

0600:
820 US station
830 US station ID with pop music background
920 ID
1080 The News Never Stops -

1120 US ID
1230 Often something here with low modulation
1290 US station
1420 Same news jingle as 1540 KXEL

0700:
1150 CBS News jingle
1290 EE ID
1580

Good DX!

3255. 1510Khz UNID

Yahoo group: skywavesmw
Date: 2012-10-31 01:13:30 UTC
From: Chris Thatcher
Topic: 3255 Message: 3255

Hi folks,

I'm pretty new to MW DXing, so I guess you'll all know what station I'm receiving.

I can't catch the ID, but it seems to be a North American talk station on 1510Khz. Just before 1.00am UT, they mentioned a phone number 800 797 1239. Now they are saying "This is NBC Sport Radio".

Anyone know what station this could be? I don't have a recording. Just listening on my Lowe HF225, with long wire antenna.

Chris.

3260. No overnight recording thanks to recurring Perseus glitch

Yahoo group: skywavesmw
Date: 2012-10-31 09:49:19 UTC
From: John Faulkner, Skegness
Topic: 3260 Message: 3260

It's not the first time it's happened: I put Perseus on overnight record and looked at the computer this morning to discover that Perseus had switched the Input Select to "Network", all by itself. Why does this keep happening?

Two windows had appeared: "Network Messages" and a box for "Network Settings".

So I only recorded up to 00:30.

Disappointed as this was the best night of the season so far.

John

Hi John,
Just got to say,some great logs,I used to think the same about my QTH, the midlands is hardly the mecca of DX.
I think it just a case of using SDR's and better antennas,and of course the conditions,and lastly all the friendly people on skywaves to help out with ID's.

Keep them coming John

Yes the same here,my Winradio G33DCC has made me get back into the hobby,although the biggest improvements was going over to the wellbrook Flag and then using a quantum phaser and Wellbrook ALA100M loop.

Not sure if you managed to record last night, had a ID on 1120Khz KMOX St Louis 03.00, a 1st for me,as this is normally a carrier channel.

I've read that conditions may be good up to mid November! :o)

3265. Re: [skywavesmw] Re: Skegness Log & MESTOR

Yahoo group: skywavesmw
Date: 2012-10-31 14:23:12 UTC
From: John Faulkner, Skegness
Topic: 3254 Message: 3265

No, sadly I only got to record a half hour around local midnight. I will check this file shortly but there is nothing beyond about 00:32.

I posted about my problem to the Perseus SDR Yahoo Group and had a couple of responses. It was suggested that I use a programme called Mestor to record overnight. I downloaded it from http://peditio.net/utility/softat/Mestor.zip and installed it to the Perseus directory - where it must go as it needs to make use of certain Perseus files. It appears as a little recording facility and is so simple to use. Apparently it is very stable. I gave it a quick try and it works perfectly so far. I will have more of a play with it later when I have more time.

Cheers

John

Hi Paul.

I did record as it happens. Some very good peaks from China 1521. Not had much chance to listen properly but I will upload them shortly.

Cheers

John

3269. ULTRALIGHT BAREFOOT REPORT

Yahoo group: skywavesmw
Date: 2012-10-31 20:33:19 UTC
From: patrice.privat
Topic: 3269 Message: 3269

Hi

Tonight I have been trying to log from my QTH in Beauvais what I heard from Moss (Norway) last night on my last evening in beautiful Norway , and it yielded 3 new ones :

1251 Kossuth, Gyor/Debrecen HNG //540 khz ulr #337

1404 Radio Targu Mures ROU ulr #338

1539 VOA Al Dhabbiyah UAE Urdu ulr #339

other interesting finds from Norway are impossible due to nearby stations here on 1449/1485/1494 and 1548 but I'll keep trying before sunset
all thru the winter months..

Pat

3270. Re: 1580 playing Elton John? also Saudi on 1521

Hello John,

Thanks for listening. Unfortunately deep fades when they were talking. Without you hearing the same song at the same time it will remain as a tent CKDO. The heavy QRM at the top of the band was off on Sunday morning, but back every other day since so no further reception on 1580 was possible.

Regards

Peter
Blackpool UK

From: pe1etr
Topic: 3271 Message: 3271

Hello all,

A couple of firsts for me, but no doubt the rest of you can receive them on a novelty shower radio :)

1010 CFRB Toronto Canada "News Corp's ten-ten in Toronto"
http://youtu.be/yB4rNqd0oHQ

1050 WEPN NY USA "ESPN Radio"
http://youtu.be/TciOJktePvU

Blackpool UK
Alinco DX-R8E + indoor flag with 16:1 binocular balun.

I haven't managed to get WEPN so far this season Peter. Never say never!
We are at the mercy of propagation and not "So-and-so DXer says it's
just not possible from your location" 's Law! ;O)

Cheers

John

I am certain it is english.

I can make something out but it is a bit confusing.

At 00:08 I hear something that sounds like "KCMI" "CKMI" or "CKMR" or "CJMR" and then I think I hear hear the announcer say something like "1350" or "1320" or "1360" .

My best guess at the section between 00:08 and 00:10 sounds to me like the announcer says "CJMR (or KCLI?) 1320 with your current conditions now."

I cannot make out anything further.

Which interestingly enough CJMR is a real station.

http://www.cjmr1320.ca/

Could they be in the process of switching to 920?

Or my ears are making everything up...it's a difficult sound clip.

The more I listen I can make myself hear "KCM..." or something like that.

I am guessing by the sound of the clip you have the selectivity set very narrow? Or is it just the distance of the signal?

Thanks John for taking a listen,
I'm sure another chance will appear for 920Khz, The 920Khz recording was a weak signal, and normally just appears as a carrier with no audio,this is probably due to my QTH. (The Midlands of UK),my bandwidth was set 4khz, we all have a teasing frequency,and this has been a on going one.

I noticed you also use a Quantum Phaser, I've had mine for 3 months now, and I have to say it has made a hugh improvement on my DX catches, did you find the same when you went over the the phaser?

Hi Damien,

I have had the Quantum Phaser for about a year and a half now and it really has made a huge difference.

Take a look at my home QTH log in the files section under "Kugellager's Files"

http://uk.groups.yahoo.com/group/skywavesmw/files/Kugellager%27s%20Google%20Earth%20Files/

If you look in the "Signal db" column and see the notations with the "ph" in front; those are all of the stations I have logged while using the phaser. There are over 100 (I think) new logs since I added the phaser and that is with a maximum of DX'ing about once a week for 2-3 hours at a time. I usually seem to log at least one new station each time I listen (I have logged as many as 4). It really helps me to cut through the IBOC hash and/or adjacent channel spill over from a 50kw regional or local high wattage station. I can null out noise as well.

Take a look at either side of 560 KLZ for example. I logged several stations throught the IBOC and then caught them with the IBOC off and logged several more as I could null out the spillover. 1390 KGNU is another good example.

In addition, on some of our crowded graveyard frequencies here in N America, I can turn the phase dial and listen to several stations at different positions. All of this with my two main antennas that ae only 80ft apart. I have another antenna where I can get a separation of about 115ft which seems to provide different and sometimes better nulls.

I am guess you are seeing similar results?

Definitely has really opened up DX'ing for me.

Sheesh...Sounds like and add for Quantum Phaser...Gerry should love it. :'D

From: John Faulkner, Skegness
Topic: 3279 Message: 3279

1070 1109 USA WFLI, Lookout Mountain (TN) Caught before power-down. USA Radio News ID at 23:00:57. Country Gospel music 6698 km

This was an unexpected and very pleasant surprise. , but it took me all day to gather sufficient information to make a positive identification ... /which I didn't actually get as it happens./ Some detective work was necessary and I am grateful to Paul Logan for his help.

Firstly I was listening to a recording of the WFLI ID heard at 23:00 by MW DXer Paul Crankshaw in south-west Scotland. I checked my 1070 on my file at the same time and heard nothing like this, though I did hear a country song about half a minute before the hour before the signal faded down a little. This sounded like the same song I heard playing before the ID on Paul's recording. Alas, any ID at the top of the hour at my end was obscured by tremendous splatter. But playing beyond the top of the hour I heard the signal fade up again and caught a news broadcast and a clear mention of "USA Radio News". This was also in accordance with what Paul heard. Still no ID however.

OK. I'm a sod for trying not to let a good catch get away and persevered, way beyond what I probably should have. I approached Paul Logan, who also logged WFLI and he told me he heard gospel songs up to 23:10. I sent Paul a recording of the songs I had on file leading up to that time and he confirmed they were the same he had been hearing on WFLI. OK, it's a convoluted way of trying to identify a station but it removes doubt from my own mind and makes me feel more able to say that I definitely heard WFLI. Since hearing Paul Logan's recording of the same time period I can now recognise the OM presenter and his song announcements too.

WFLI was caught just before "power-down" and would have been using its full 50,000 watt power allocation - slightly beyond its allocated time too!

After the problems of the Perseus software switching itself off on the 30th/31st I installed MESTOR and this worked fine for my recording overnight on the 31st/1st. There was just the one station of interest - an ESPN Radio ID on 1380 at 00:00. Sadly there are too many ESPN stations on 1380 to make an intelligent guess.

Good DX!

It was an ID on 1430 I have not heard before. You'll definitely need headphones as it is very weak and noisy. There is a "14-30" ID in there I am not familiar with. Maybe somebody will recognise it.

Thanks

John

To me it sounds more like "beautiful 1430" but that makes no sense either. It can't be Worcester either as WVEI Worcester is on 1440 and is sports. I have no idea. -Mike

Thanks Mike.

I was thinking it might be Fairchild Radio, but they wouldn't say "Fairchild 14-30". The words leading up to the ID sound like "we'll go everywhere" then /something/ 14-30. Not enough info to go on really, not to mention it's very weak, so I think I'll have to scrub this one.

Thank again.

John

I'm sorry it took me so long to reply to this, but WDCD went off the air back in the spring, I think it was, due to financial problems. They had intended to return to the air with another format, but if they did, I can't hear it here. WDCD (and WPTR before it) was always a thorn in my side keeping me from hearing any exotic DX on the channel. However, all I hear on 1540 now during the day is WXEX in NH and WADK in Newport, RI. And at night I hear WXEX, KXEL and ZBM in the Bahamas. I also checked with another DXer and he hasn't heard them since they went off the air and considering that they ran 50kw, we should hear them strong during the day, like we did before.

I think they are off the air for good. Times are really tough when a 50kw flamethrower can't stay on the air.

3294. Help with spanish language on 1570

Yahoo group: skywavesmw
Date: 2012-11-05 13:50:01 UTC
From: BEAVAN SIMON
Topic: 3294 Message: 3294

Hello to all,

I've been a lurker on this group for a few months since coming back to MW dx after a gap of er.... 30 years or so.

After clearing up some horrendous noise from appliances in my house, I'm starting to enjoy getting back into TA reception with the help of a Perseus and a Wellbrook loop. Both expensive, but well worth it in my urban environment.

Anyway, I'm still getting used to the band which has changed so much and having most trouble with the Spanish language stations. I just can't seem to ID them.

I picked this one up on 2nd November at 05:00 on 1570khz. Can anybody help ? I'm hearing "Viva fifteen", an unlikely combination of two languages, but it is probably my cloth ears

https://www.box.com/s/snutzi9jcttdc5bur9f2

Thanks

Simon

I hear mentions of what I thought was VEA, as in Radio Vea, Guatemala, but it sounds more like VIVA the more I listen. Other than this I cannot draw anything else out of it though I am sure there is an ID in this too. Somebody will be able to translate more than me.

If it is VIVA then it could point to a Spanish station in Beverly MA, WNSH. They have the slogan VIVA 15-70 but they run only 85 watts at night. Their daytime power is 30 kW however. When did Sandy hit the eastern shores of the US? I just wondered if they stayed on day power because of the emergency. This would be a very nice, ultra-rare catch if so.

John

No wonder Stuart. I erroneously reported WQBA as being received on the 4th. That should have read the 3rd.

This morning wasn't too bad, but it was only the regular east coasters which were coming through. I missed 1680 WOKB but thanks to your tip I checked and there they were! Due to time constraints I have only usually been checking for IDs at the very top of the hour - no more than five to ten seconds either side. Your reception was much better than mine.

David,
list your logs here, and tell who helped you to ID it.

This is not a platform to only promote your YT videos

Jurgen Bartels Suellwarden, N. Germany
Antennas hor.: 45-87MHz: 11-ele, FM: 15.11, Band-III:13-ele, UHF:48-ele,
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 90m bev 220°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
http://zeiterfassung.3sdesign.de/station_list.htm

I don't watch your videos, David. Requires too much time, and isn't interesting
to me either.

I just read what you post here, and that should be your log or other
interesting MW news, including the names who helped you.
You may add addtionally a YT reference of course.

Just a single YT link is not what we want.
We want to read real content here.

What? Something is not right here. For a MF dxer to say he is not interested in the reception of Mexican stations (and rare ones at that) heard in the UK on an indoor antenna is quite incredible. I quite like David's brevity - I can immediately see from the email that he has received Mexico and click here to see the video. After the poor conditions of most of October that is good news to me. Personally I find YT videos of reception much more interesting than box mp3s for example as you can see the exact Perseus settings used and the waveform itself. The question of who helped David is a red herring - David freely admits he speaks and understands no Spanish or Portuguese and he always (well 99% of time) gets help in id'ing and credits that help.

I see that Jurgen is a moderator so is he speaking officially here? Was my posting of a YT video yesterday that enabled another member to get a new one also falling foul of these "rules"? We urgently need a statement from the mods as a group here if he is.

If Jurgen is voicing a *personal* opinion that he doesn't like YT videos fair enough. Delete the emails that contain YT links. However don☐t accuse other people of using Skywaves to promote their YT channel when you use various Yahoo groups to promote your hardware and software products. Now I do NOT actually see anything wrong with using DX groups to promote dx hardware and software - Jurgen is a talented guy and lots of people appreciate StationList for example and want to read news and learn about updates for it. I have no issue with that at all, and look forward myself to seeing what extra features and functionality has been added. In the same way lots of people like to see YT videos of what can be achieved using a very modest antenna set-up in a loft and again I have no issue with the promotion of that. I would say it is one of the reasons the group exist.

Regards

Stuart

Thanks for you efforts John.
I find the Spanish language stations especially fustrating as I know a little of the language, but not enough to pick out meaning from distant stations.
The same night I heard a station at 02:00 on 1590 which mentioned Nicaragua twice just before the hour. It got me interested and then I heard Costa Rica twice and no ID ! Could have been anything.

I've never understood why people make YouTube videos of audio when an
mp3 would be all that is needed, but to each his own, I suppose.

I'll listen to an .mp3 anytime but not YouTube files unless they're video.

For me watching the YT video is like being there when the DX was actually coming in. Interesting to see the waveform, qrming signals, see effect of changing from am to lsb/usb, see gain used, filter bandwidth and shape, nr on/off and setting. Much more interesting than mp3.

The issue here is one of unnecessary criticism of the way people prefer to conduct their hobby. I wrote something about this not so long ago which I intend to add to my blog. It concerns the kind of arguments which often pop up in our hobby, such as:

* Broadband SDRs vs single frequency reception
* Being accused of cheating because of using a DX cluster
* Not using equipment of a sufficiently high standard
* So called "List Logging"

There are a thousand and one differences in the way we individually enjoy our hobby, but we should all be more accepting of the facts that there will always be differences and we should not be so critical just because it is not how we might do it.

Enjoy the hobby!

John

Can anybody explain to me how I calibrate Perseus?

I have seen videos and read the instructions but it never works. I only once seemed to do this successfully, by trial and error, but I cannot remember the sequence.

I will have to use BBC 909 kHz as a marker as I believe that is precise. There is no way I will receive the normally suggested WWV on 15 MHz to do this.

Thanks

As long as one can read beforehand what is in the clip, then it is fine.
But in this case you need to watch the video first before finding out what has
been logged.
Just generally saying "Mexico" is not sufficient, why not list the catches?
I regulary get Mexico on several channels, and thus I am more interested in the
unusals, is it in there?

As Mauno posted it nicely:
"But I suppose it is not too a big trouble to mention ALSO the station,
frequency and time in the message, i.e. a normal logging, so one can
decide if to go and watch the video? "

So is there a problem doing that?

Hi Paul,

> I measured the output from my usual perseus power supply as 5.32 v so I dont

You need to measure it while supplying Perseus, a load-less measurement does not tell the truth. As a load you can use a 10 ohm resistor
(0.5A / 5V = 10 ohm)
Use a large one because it will get hot, or measure very fast.

> think the slight difference in voltage would be enough to stop the SDR being
> powered up and working properly.

I checked my Perseus with an external source, and it worked down to 4.5V, I did not try it lower.
Current is 500mA
To my surprise: when Perseus s/w is closed, the box still draws 300mA.
So better disconnect batteries when not using it

Check the voltage directly at the plug when plugged into Perseus and s/w is running.

It might help to connect an 100..470uF capacitor at the plug. But only when you use a thin & long cable and a bad battery.

It seems the AC output impedance of the battery is too high.
You can lower it with a capacitor, use 1000uF or higher, not the lower values I posted earlier. Place it as close to the plug as possible when using a thin cable.

Looks like some circuitry inside it -says it automatically adjusts current
based on device. Bet the ROM has never heard of a perseus!

These things are really poor for this application. I doubt the 12000mAh rating - they usually have a 3.7V LiPo cell inside with a square wave pulsing inverter. Do you honestly think you could get 12Ah from it? 2Ah maybe, not 12Ah. Even the most efficient LiPo in that size package couldn't give you what this is quoting. If you pull too much current the voltage will drop with other batteries but owing to the poor inverter circuit the drop in these things is far greater. I've had several and on paper they look great, however they are only good for what they have been designed for. And you will get horrendous QRM from them).

I personally would recommend a pure DC 6V gel battery (if a 6V supply is OK) and a small wall wart charger for it. You will get 2-3 years off it if you are abusing it a little or more if you don't abuse it.

You're welcome Julian.

I'm not sure when the trial started. I can't always get these two stations from here. I thought it might aid our Continental members to ID the stations. I have noticed any other BBC stations on switch off. BBC R Merseyside came back after its switch off trial. It is loud and clear here unfortunately. :)

> use - the name and model number - maybe maker information?

Certainly! I ordered namely this one, suggested by Bjarne:
http://www.ebay.com/itm/251101804901?ssPageName=STRK:MEWNX:IT&_trksid=p3984.m1497.l2649

This looks almost the same, only the backside is different:
http://www.ebay.com/itm/12000mAh-USB-Power-Bank-External-Battery-Charger-for-iPhone-iPad-iP-od-Mobile-/330820293540?pt=PDA_Accessories&hash=item4d066d13a4

It is much cheaper, but who knows, maybe this happens to have a noisy DC
to DC converter inside?

You can make it what size you want! Horizontal section just needs to be longer than vertical. If you have the space 10x4m is what most boys use. Rotation though is a big challenge.

http://www.dxing.info/equipment/ewe.dx

This is the version I use, though the URL above shows a "Ewe" antenna.
It's virtually the same as the flag, but the flag isn't grounded at
either end like the ewe, just connect the grounding points together = flag!

The length of the verticals give it gain. Longer = more gain. The flag
is simply two verticals phased together to give it its directivity.
Double the size of the flag and the front to back is not so good. Best
to stick to the original size: 10ft up, 25 ft across. (roughly 3m x 7m)

John

Stuart / John,
Thank you both for the quick response to my query on the Flag antenna,
the linked article was very explicit on the subject, just the information that I required
to build the one.
The ' rotational ' aspect will be by virtue of the feed end vertical being fixed and the
outboard end can then be slewed around through 360°, though possibly not being
a terminated loop 180° would suffice ?????
One aspect I did not notice in the article was the height of the bottom wire over
the ground. any clues as a starting point ?????

Stuart,
Very interesting, I was imagining more like 2 metres !!!!!
Lower will make the feed mast shorter, a good thing with our Westerly winds hi!
If the feed box is on a couple of terry clips it will allow me to move it up and down the pole between 0 - 2 metres.
A nice sunny day predicted so I can arrange the loop in comfort.

Hi Brian,
I'm a bit late on this one, I have a ALA-100M (Order version of yours) & a FLG100LN, according to "Andy" at Wellbrook, you won't be able to use your ALA-100LN as a flag.
I asked the very same question, which lead me to purchase the FLG100LN for my Flag.

Email from Andy

Dear Damien,

You can't use the ALA100M for a Flag antenna.

I have a new FLG100LN now; its a lower noise version with 22dB gain over a 16:1 Matching transformer. If you order the FLG100 via the website I will ship the new type.

See attached data sheet.

Kind regards

Andrew

Of course, I've never tried to do it,and just took his word on this matter, but I'm believe it's down to it's design.

As John & Stuart have already probably mentioned, the Flag is a great antenna. I tried to rotate my flag, it is possible, but you end up with a mini flag, as trying to rotate 4m x 10m is nearly an impossible task, unless you have an open field of course. Then it's the conctruction of it, PVC pipe is ok on small runs, but it's just to flexable.
This is why I went down the route to purchasing a Quantum phaser, but that another story again !

If I can help any further, just ask, all the lads are helpful on hear.

Topic: 3355 Message: 3362

The bottom wire of my flag lies on the ground, trailing through some plants. The top wire rests on tree branches. Neither the bottom or top wire are that straight, but just "as straight as reasonably possible". I understand this doesn't matter too much as the horizontal sections don't actually receive much and are only there so the flag can be tuned.

There are two other minor modifications I made which improved my flag quite dramatically but I can't offer any detail:

1. I used to have a far better tuning arrangement for my flag which gave deeper nulls, but I lost it, hence me not being able to provide the detail. The website shows a variable resistor for the tuning, but somebody (no names mentioned as I fear he will be bombarded with requests to build lots and lots of them and I know he has no time for this) built me a more complex tuning box which contained a PCB and various various components. There were switched settings which offered "before and after" comparisons and other things which seemed to match everything much better, resulting in VERY deep nulls. I don't get these amazingly deep nulls with the variable resistor by itself - sadly the method I am using this season.

2. I also noticed benefits when a two-hole core was introduced for for the transformer coupling in the feeder box. I guess this just gives it a better match.

The basic flag works very well indeed, but the modified version I used to enjoy was something else. Maybe somebody would like to consider these two modifications when constructing their flag (and share details here!).

I read that the flag has a much lower angle of reception and therefore performs more like a beverage than a loop. I can back this up when I look back at my loggings since I started using the flag over the last few years. West coast USA and Canada became possible. The Canadian prairies, the Northwest Territories and even Alaska! I never had any of these with a standard loop.

John

eBay seller kafa2500 sells Flag/Ewe/beverage baluns and variable/fixed resistors. He□s in the US but is very reliable and I recommend.

Cheers

Stuart

Hi Brian,
I'm a bit late on this one, I have a ALA-100M (Order version of yours) & a FLG100LN, according to "Andy" at Wellbrook, you won't be able to use your ALA-100LN as a flag.
I asked the very same question, which lead me to purchase the FLG100LN for my Flag.

Email from Andy

Dear Damien,

You can't use the ALA100M for a Flag antenna.

I have a new FLG100LN now; its a lower noise version with 22dB gain over a 16:1 Matching transformer. If you order the FLG100 via the website I will ship the new type.

See attached data sheet.

Kind regards

Andrew

Of course, I've never tried to do it,and just took his word on this matter, but I'm believe it's down to it's design.

As John & Stuart have already probably mentioned, the Flag is a great antenna. I tried to rotate my flag, it is possible, but you end up with a mini flag, as trying to rotate 4m x 10m is nearly an impossible task, unless you have an open field of course. Then it's the conctruction of it, PVC pipe is ok on small runs, but it's just to flexable.
This is why I went down the route to purchasing a Quantum phaser, but that another story again !

If I can help any further, just ask, all the lads are helpful on hear.

I'm sure you could decode its AM stereo if you wish :)

I listen to it in stereo be cause I can, and the novelty hasn't worn off yet.

John,
Sounds like your antenna was seriously ' modded ', a good friend to have hi!
Ok on the 'binocular core ' for the transformer, I have seen designs using them,
possibly they are more balanced than the normal ' polo mint ' type ????
When I purchased the ALA-100LN it was with a Delta loop in mind, Andy recommended
the active unit in the center of the base wire of the 20m perimeter loop,
this was ideal as it made the antenna easily rotatable as it was hung from the
apex on a cord catenary.
Are you active on the amateur bands still ???? it is a long time since I worked you.
Regards,
72, Brian, GØNSL.

Damian,
Thank you for the comments.
I guess my idea is not really a true ' Flag ' antenna, more a rectangular loop fed at the lower corner.
When I purchased the ALA-100LN it was with a Delta loop in mind, Andy recommended the active unit be in the center of the base of the 20m perimeter loop,
this was ideal as it made the antenna easily rotatable as it was hung from the apex on a cord catenary.
As with most antennas there is always another idea to try hi!
Regards,
72, Brian, GØNSL.

Slightly off-topic - I am only active on 10m Brian. Strictly speaking we are not allowed amateur radio in this area (VERY strict housing association), though I argued a little and they admitted there were certain exceptions where they couldn't stop me. It's a case of playing it safe and I don't want to jeopardize my main interests in band 2 and MW DX, for which I have permission for the aerials. For 10m I use only 10 watts into a wire half-wave dipole which is below fence height. This hasn't stopped me working the world and even breaking through pile-ups at times, though I'll admit I may need to be lucky. The snobby gits who use 1kW or more and huge cloud-top beams aren't always impressed when they find out how little I am using and working /almost/ the same.

We also plan to become active in data modes though exactly what and where hasn't been decided. I like CW, but WSPA also intrigues me. There are a world of alternatives out there.

3370. Flag Antennas etc

Yahoo group: skywavesmw
Date: 2012-11-10 22:38:40 UTC
From: Paul Logan
Topic: 3370 Message: 3370

Hi all,

thought some of the following might be of interest to some of you.

Bruce Conti has some excellent loop designs here:

http://www.bamlog.com/#Section3

See especially the small corner fed broad band loop which would be fairly easy to make completely rotatable.

The 16:1 baluns mentioned in these articles are:
22 turns to 5 turns on an FT140-AJ down to 150 khz

41 turns to 10 turns on an FT114-43 down to 500 khz

The Kaz loop is a good antenna too requiring only one central support - see

http://www.dxing.info/equipment/kaz_bryant.dx

requires a 19:1 balun =

24 turns to antenna 6 turns to coax on an FT140AJ toroid OR
44 turns to 10 turns on a more easily found FT114-43

I've had great results from both a Conti and KAZ loop. i augment the signals with a DX engineering RPA1 preamp.

Dont buy baluns folks - they are so easy to make (even i can do it)

Google "fabricating impedence transformers" by John Bryant.

Hope this was of some interest.

Paul

Do not use 43 material, it is for higher frequencies
AL is low so you need many turns.

For MW use 77 material

Also FT140 or FT114 are too large (mechanically)
unless you want to wind thick wire on it, which is not needed.

I used FT50-77 with 0.2mm wire

but found that it did not worked well below 100kHz

so I now use binocular BN 73-202

It has a very high AL.
My 50:450 ohm transformer needs just 3:10 turns
0.2mm wire

So, very easy to make, and with excellent performance down to 8KHz

BN 73-202 costs about 1 EUR

Only this allowed me to hear the Russian Alphas, I should have never spend my
time on winding torroids. :-(

hi Jurgen,

J Material seems fine for medium wave, type 43- I take your point.

That's very interesting about the small binocular cores. I may try some of those.

I think I had those big ft 140 -AJs originally for winding coaxial chokes.

Paul

Hi Paul,

> J Material seems fine for medium wave, type 43- I take your point.

If you can find it.
Here it's not available, while 77 is easy to get. The often recommended
73-material is also hard to get here

> I think I had those big ft 140 -AJs originally for winding coaxial chokes.

Yes for this case you need the larger ones. I even have have a few FT240 with
35mm hole, good for winding power cable on it, but costs 14 EUR

Enter in the top-left search field
BN 73-202

You may also ask:
http://www.andyquarz.de/ferrit-ringkerne.html

it's not listed but it says: "BN43-202 on stock",
so he may have BN 73-202 as well?

I guess there should be a seller in the UK also.

At least it makes this a decent area in which to live. Some estates can be very rough. We even have to obtain written permission to paint! Probably because they want to ensure nobody paints the wooden doors. Inspections have to be carried out by officials afterwards to make sure it has been done correctly, so you can imagine we had to get permission to tile the bathroom and to add a small fence and gate on the rear garden. They regard themselves as "strict but fair".

I do have a long hedgerow and small trees at the rear of the garden which provided a perfect place to run out a north American beverage two years ago. That might find itself home to a few wires again. The Housing Association don't that land. Over that are fields which go on as far as the eye can see. I have plans! ;O)

As for The Wash, it's a vast expanse of marshland just waiting for beverages. I am hoping it will bring in some exotic DX from the far east.

Cheers

John

3381. Overnight logs.

Yahoo group: skywavesmw
Date: 2012-11-11 17:50:24 UTC
From: Paul Logan
Topic: 3381 Message: 3381

Hi all,

not much to get excited about, conditions fairly poor overnight but still delievered up the following:

1580 0440 CLM HJQZ Radio Maria, Barranquilla Om with catholic prayers // web. fair peaks over ckdo 4694 m
1410 0730 MEX XEBS-AM La Más Perrona, México D.F Spanish songs, some ranchera. Good peaks. 5201 m
1470 0730 MEX XEAI-AM Radio Fórmula 3, México D.F Presumed. Non stop Spanish language oldies. 5203 m
1290 0738 MEX XEDA-AM Radio Trece, México D.F "Trece, la grande differencia" and then into a Queen song. 5201 m
(thanks to Max Van Arnhem for help with this one)
1590 0801 MEX XEVOZ-AM La Mexicana, Los Reyes Acaquilpan Om with ID and power given. Fair over WARV. 5198 m
1530 0802 MEX XEUR-AM Radio Fiesta, México D.F Reference to 50,000 watts and Mexico. Latin dance music. 5201 m

RX Perseus SDR and Conti Loop = 12 x 24 feet approx.

Paul Logan,
Lisnaskea, N. Ireland

3382. Skegness Log: 11-11-12

Yahoo group: skywavesmw
Date: 2012-11-11 21:44:52 UTC
From: John Faulkner, Skegness
Topic: 3382 Message: 3382

1470 0642 MEX XEAI-AM Radio F?rmula 3, M?xico D.F/Granjas Esmeralda (dif) Gruppo Formula ... Mexico ID in severe splatter but fair peaks 8904 km
1590 0700 MEX XEVOZ-AM La Mexicana, Los Reyes Acaquilpan (mex) La Mexicana ID. More IDs. Fair peaks. Tnx Stuart Heathcock for help. 8895 km

It was a Mexican morning! In addition to the above I heard unusual Spanish signals on various other frequencies, including 1500 which I presumed to be Radio F?rmula. 1270 was also of interest, but as always, so many signals, so much splatter, fading, etc., it's the luck of the draw who fades up and IDs on the hour.

I checked my Spanish on 1290 at 07:38 Paul but my station was different. Not a trace of Queen. Maybe Puerto Cabello, but there weren't any IDs or speech for the hour long duration. A mystery.

Good DX!

John Faulkner, Lincolnshire (JO03dd) 1m ASL

Receiver: Perseus SDR,
Antenna: Flag at approx. 290 degrees
Software: Perseus v4.0c, MESTOR

The Siemens/Epcos range of ferrites is avalable in the UK through RS and I have used these succesfully when I was playing with the EWE some years ago. Three types are well suited to MF antenna matching and isolation
Stock-number 212-0617 is the binocular best suited to matching transformers, grade N30 with an Al of 10?H ! (per hole). I measured and found that 5 turns (in one hole, out the other) was sufficient at 50 ohms for negligible loss down to 150kHz. About 1GBP each per pack of 5
290-6219 is a 42mm Ring-core type N30, Al = 5?H, at about 4GBP. These are large enough for several turns of RG58 co-ax to make a common-mode choke to isolate the aerial from the domestic noise sources
212-0926 is a 25mm N30 Ring-core, Al = 4.6?H which can be used for aerial matching transformers, or wound with many turns of RG178 3mm co-ax for a compact common-mode choke. About 1.50GBP ea per pack of 5
I have a small stock of these types which I can supply singly at cost if anyone needs them

John - I'd be very interested to hear any comments on your experiences with the Flag suspended from trees. As I said in post #1014 I tried an EWE supported by trees, the verticals being close to the tree trunks, and it had low gain and no null to the rear. Pity 'cos it was pointing about 270? and as far as I can get from local QRN. Maybe I should try again, but the farthest I could put the verticals from the tree trunks would be only about 3m

Jurgen,
Many thanks for the links.
Both seem to suffer from the normal situation we find of 1 Euro for the item
and 8 Euros for the packing.
If there are any suppliers in the UK they did not appear in my Google search
which I did actually suffix with ' UK only ' hi!
There could of course be a conflict of coding that they are known by a different
number in the UK.
Regards,
72, Brian, GØNSL.

Julian,
Though I have never actually dealt with RS I understand they have
quite a high ' small order ' charge, so I certainly would appreciate the opportunity to
purchase a couple of the binocular ferrites at whatever cost you decree.
If this is acceptable please e-mail me direct at brian.nsl@... .

Also Reichelt.de has a minimum order for destinations abroad.
You could ask around if others need them too and place a larger order. They have other toroids as well, and are my main source for ferrites, because of the low prices.

Enter in the search field
ferrit
and then scroll down the result page

> There could of course be a conflict of coding that they are known by a
> different number in the UK.

These are Amidon products.
Other manufacturers have their own model numbering system, of course.

John,
As long as you are both comfortable a few ' petty ' bits of officialdom
can be tolerated, though I must say that permission to tile a bathroom
sounds somewhat OTT !!!!!
If these type of covenants stop people building sheds covered in lino
then I am all for it, but unfortunately some officials involved do get a bit carried away.
Renovating a listed building can be a nightmare when you have to find horsehair and dung
for the rendering hi!
Are you still involved in music since the move ?????
My loop antenna was finished yesterday, because of the fact available height is more
convenient
than length for the rectangle it has finished up at 20ft vertical sides with 13ft
horizontals,
the bottom wire being 3ft above the lawn.
This morning on the NDB frequencies I needed all the attenuation the rig had available
!!!!!!
So much for your comment on ' the vertical components provide the gain ' hi!
Regards,
72, Brian.

From: John Faulkner, Skegness
Topic: 3388 Message: 3388

http://www.mediafire.com/?jibrz686tt62h52

It was a badly disorganised DX trip, filled with bad luck, but I eventually got one file recorded.

I was set up at The Wash for 1240 and immediately started recording. China was already good on 1521! I hadn't realised that my recording had switched off about one minute before the top of the hour. Unknown to me, my laptop hard drive was full! I have a good ten minutes recorded before 13:00 though if anybody is interested.

By 1400 I was getting quite excited, still blissfully unaware that my hard drive was full. I tried to set Perseus recording but couldn't work out why it kept swithing off. It didn't take me long to realise that the hard drive was full, but not until after the top of the hour of course!

All ready to roll by 14:30 and another problem ... somebody walking their dog had let it off the lead to roam free. I realised something was wrong before I saw the dog as MW reception seemed somehow different. Luckily I realised in the nick of time and repaired the damage. It was a simple case of hooking the wire back to the copper rod. The dog had clearly taken a dislike to my beverage and pulled the last few metres away from the copper rod. I was amazed to hear how much difference that termination made. I have tried as much as 2,000 ohms at the termination point but it makes no difference at all to the null. The wire simply needs putting to earth and that does the trick. Maybe somebody can explain why this might be.

So, the 1500 file was recorded. *Now for the embarrassing bits: Don't go by the time stated in the Perseus window as my laptop does not keep time well. This time it was 35 seconds fast. Furthermore, I thought it was the 13th today and so labelled my recording "13-11-12 1500".* Just expect the worst from now on! ;O)

There are LOTS of Chinese and other Oriental signals and, hopefully, one or two exotics in there this time. Conditions were the best I have known so far at The Wash. Enjoy the file!

Cheers

John

I have had a quick scan through and these are my initial notes:

Sorry but I don't feel confident enough to guess many of these so I thought I ought to leave it to the experts.

I know the "time pips" are irritating to some but they indicate that something out of the ordinary is present. I am not very good with my Russian interval signals either.

I don't know if conditions were anything to shout about this afternoon, but I could not hear CRI 1521 on the car radio at all while this was being received. I usually hear CRI at armchair level in the middle of winter here. I think the best is yet to come, but this is quite amazing.

540 Russian interval signal
549 Russia & CRI interval signal
558 Arabic
567 Two different Russian interval signals
594 Two Russian Interval signals
639 At least two Chinese time pips
666 Oriental talk mixing Chinese time pips
684 Oriental OM. Maybe other oriental there too
693 Russian time signal and ID
711 Russian interval signal. Possible Chinese time pips
720 Chinese time pips, better in USB
756 At least two Chinese time pips, probably three
783 Chinese time pips in LSB
810 Russian interval signal. Chinese time pips
819 Who is this with the echo? Also ID similar to "Radio Americana"?
855 Chinese time pips?
891 Russian interval signal/Japanese or Korean time pips
900 Chinese time pips. Oriental OM?
918 Very weak Chinese time signal. Also Oriental YL USB?
927 At least three Chinese time pips. Oriental music & OM
936 Chinese time pips
945 Two lots of Chinese time pips - better on USB
963 Two lots of Chinese time pips
972 Japanese or Korean time pips
981 Billions of Chinese! You should hear either side of this!
990 Chinese time pips
999 Russian interval signal
1008 Japanese or Korean time pips
1017 Japanese or Korean time pips. Weak Oriental music and speech
1035 At least two lots, possibly three, Chinese time pips
1044 Oriental OM. Chinese time pips
1071 Chinese time pips

1098 Pile-up with Orientals! Japanese or Korean time pips?
1125 Two lots of Chinese time pips
1134 Japanese or Korean time pips. Chinese time pips at end?
1170 Japanese or Korean time pips. Chinese time pips
1179 Chinese time pips in LSB
1224 Japanese or Korean time pips
1278 Oriental language? At least two lots of Chinese time pips
1287 Chinese time pips. Oriental singing?
1296 Chinese time pips
1305 Two lots of Chinese time pips. Better in USB
1341 Chinese time pips and OM on USB
1350 Chinese time pips
1359 Chinese time pips
1377 Chinese time pips. Mostly over France
1404 Chinese time pips
1413 Japanese or Korean time pips. Chinese time pips
1467 Oriental. Chinese time pips
1476 Chinese time pips
1512 Oriental YL. Japanese or Korean time pips. Chinese time pips
1521 CRI, Urumqi
1539 Chinese time pips and ID
1557 Oriental dominating
1566 Oriental OM
1575 Oriental OM. Chinese time pips
1584 Chinese time pips
1593 Japanese or Korean time pips. Chinese time pips

Good DX!

John

From: John Faulkner, Skegness
Topic: 3355 Message: 3390

I think it shows the authorities are trying to keep the place tidy. There are good housing associations and bad housing associations. I suppose ours are just trying to maintain a high standard. They took a very keen interest in our amateur radio aerials as it was a new thing for them. We had several meetings, including one lasting about an hour. They knew nothing about amateur radio. Their procedure for planning permission is a lot simpler too which is a bonus. A simple letter and application form. No fees. Everything agreed or denied within a week or two usually. You won't get that with council housing. This is one of the lowest crime rates in the area, in fact in the UK so we are told. Our low insurance costs back that up. There's no trouble here, etc. We couldn't ask for any better.

We are allowed a maximum of two aerials on the roof here. A Sky dish sits below the FM5 but will be coming down in the new year. I wonder what might replace it. Hmmm! My 70cm 13 element beam looks very much like a TV aerial. ;O) Or maybe my Ringo Ranger will sit nicely on the roof.

As for the music industry, apart from the fact that it smells very badly, I gave up producing for Music Factory in 2010. They have hundreds of would-be DJ/Producers queueing up to do work for nothing, just so they can see their name in lights on the CD sleeve. Oh well. I knew it was going to happen one day, but it was excellent while it lasted - 1999 to 2010 is not a bad run and included work for Virgin Radio that was. Enough bragging! I might get back to some audio or video production one day, but the music industry is a waste of time. I was lucky.

Cheers

John

John,
It would seem that you have hit a balance of opinion with the governing body of your estate,
long may it continue hi!
I look forward to your posting on adventures along The Wash in due course.
We have large areas of salt marsh along the River Mersey shore here including a nice country park
just a half mile from the QTH.
I shall try laying a coil of wire out there one afternoon hi!
Ok on the music connections, reminds me of seeing these ' one hit wonders ' on stage, after performing the song, what do I do now !!!!!!
Regards,
72, Brian.

Anybody got any idea what this is ?

recorded at 07:00 23/11/2012 on 1602khz

https://www.box.com/s/b4jrq4yvo7u39jxg1ske

At the start is Cadena SER. After 5.5 seconds SER has a brief period of
silence and there is an English voice saying something along the lines of,
"This is....on 1602AM...every hour", then SER comes back.

Thanks

Simon

Thanks Stuart.

I'm feeling a bit stupid now. I listened to that so many times and couldn't here it. Now it is so obvious.

Don't worry Simon.

These things fool all of us sooner or later. I ran a beverage out along the coast here recently and thought I'd heard something exotic from the far east, which later proved to be something from London.

The FM band is the worst - I am often fooled by programmes for foreign workers from East Anglian locals.

1440 0200 USA WVEI, Worcester (MA) Tentative. Fox Sports Radio network ID on the hour but no local callsign. WJAB are ESPN but I wonder if WJAB were relaying a station from the Fox network. This station was alone on channel and quite decent levels. 5293 km

Just the one again and it's not even 100% certain.

Only one other station of interest from the early hours of the 27th was on 970. Another sports station was heard but with no ID over the top of the hour at 02:00.

What a poor batch of conditions lately!

Good DX!

Congrats David.

I wished I'd recorded overnight now. 1130 isn't a bad channel here. I had heard that Mexican conditions were pretty good overnight.

cheers there were lots of Mexicans from 0630 yesterday morning which seemed the peak but no ids heard on my recordings as at that time its usually mostly constant music from these stations although there was good strong ids from the more common ones ie La Mexicana on 1590 etc from around 0645. Just the more common east coast stuff this morning from 0700 like KXEL etc quite strong but nothing interesting so far. cheers David h Ayrshire Scotland

Well done John on your XEARZ catch

Hope info below may be of use

73 from Edward G1MXP

XEARZ is a new station in the Mexican capital broadcasting on 1650 kHz mediumwave. The station is owned by Grupo Radiofónico ZER. XEARZ is licensed to transmit at a power of 5,000 watts day and night. DXer Héctor García Bojorge in Mexico City reported on the Grupo Radiofónico Zer Facebook page on April 27 that he heard the station, identifying it as XEARZ. Also on April 27, on DXLD mailing list, Julián Santiago Díez de Bonilla reported hearing the station identifying as "Zer Radio 1650" and giving call letters XEAZR. According to Wikipedia, the first test transmissions with instrumental music began on April 26. In the documents of the Mexican Telecommunications Commission CFT, the station manager is listed as Arnoldo Rodríguez Zermeño. Both of these sources give call letters as XEARZ.

Thanks Edward.

Having Mexico in the X band came as a very welcome surprise as it has
been a dead loss this season. Conditions in the X band often don't
relate to the conditions on the rest of MW.

I have been looking for XETOL 1130 but so far to no avail, though I did
hear /something/ which could have been them a few mornings ago.

73

Topic: 3410 Message: 3415

Unfortunately it wasn't that good after all.

This is just to just to follow up on the alert I sent last night. Conditions seemed quite good around 2200 - 2300 yesterday evening, but by 0000 things had gone flat. Conditions have been like this for the last couple of weeks with the better TA signals being early on in the evening, then a Mexican peak towards sunrise.

Hopefully it won't be long before things improve. We may have a nice long period of quiet conditions now, according to the forecast on DXLC. Maybe it's time for me to venture out into The Wash again.

Good DX!

John

1440 0200 USA WVEI, Worcester (MA) ID Fox Sports ... Goooooo now.
Surely this HAS to be WVEI 5293 km

680 0300 CAN CFTR Six-Eighty News, Toronto/Grimsby (ON) It's time
for the 6-80 News
regional weather conditions .. 5711 km

890 0300 USA WLS, Chicago/Tinley Gardens Park (IL) Difficult copy
but mentions of Chicago
at the toh. Over Spanish music station 6334 km

1120 0300 USA KMOX, Saint Louis (MO) Difficult in splatter. KMOX ID
just audible and CBS
News jingle. Big problem with splatter as
always 6690 km

1040 0318 USA WHO, Des Moines/Mitchellville (IA) Two IDs in station
promo:
Newsradio Ten Forty WHO. Fair levels 6648 km

830 0500 USA WCRN, Worcester (MA) Reference to news and clear WCRN
ID. CBS News 5301 km

760 0600 USA WJR, Detroit (MI) Extremely difficult in
Euro-splatter but Newstalk 7-60
WJR squeezed out. 6009 km

920 0600 USA KDHL Radio America, Faribault (MN) Very difficult
but I was sure I could
just make out the call letters and ABC News.
Thanks Ken Baird in Ayrshire
for checking and confirming same. 6437 km

1250 0700 CAN CHSM, Steinbach (MB) Classical guitar before the hour
then OM with programme
information. Thanks to Paul Crankshaw in Troon
for help with this. Paul
sent me a recording of CHSM as heard in Troon,
Scotland, which was clearer
than mine, so I was able to make a comparison
and thus confirm I was
hearing the same OM. I know this isn't some
people's idea of an ID but it
proves the good conditions were getting over to
the east coast. 6228 km

I was really pleased to receive Manitoba this morning - first time here on the flag. Other stations like 1040 WHO and 1540 KXEL were almost blowing the windows out!

Also this afternoon I was able to see a presumed carrier from KBRW 680, Barrow AK.

I'll say it again - these are excellent conditions considering we are in a solar maximum. I wonder what goodies the next solar minimum will bring? :)

3422. 1230 Carriers - Unusual Effect

Yahoo group: skywavesmw
Date: 2012-12-10 13:11:23 UTC
From: John Faulkner, Skegness
Topic: 3422 Message: 3422

Re-post scrambling link to photo as I understand some of my messages are being blocked by Yahoo if they contain a b l o g link. Just remove the spaces in the following. It's the first post:

h t t p : / / s k e g n e s s d x . b l o g s p o t . c o . u k

I have uploaded a screen grab of carriers on 1230 from yesterday afternoon.

I relocated my flag so it was pointing more to the north, hoping to receive more in the way of high latitude DX. It is currently set around 350 degrees. This has improved KBRW's carrier. I also checked 1230, looking for CFFB in Iqaluit in the Canadian North West Territories, a station I have identified here two years ago using a northerly flag antenna. Note the unusual waveform slightly to the left of centre. This might be CFFB, but note how the waveform twists around like an auroral arc. Another carrier also exhibits this effect, slightly to the right of centre and at the top of the waterfall, but has a much wider arc.

Can anybody explain what is happening here? I am guessing it could be the effects of auroral conditions, affecting carriers arriving from more northerly latitudes as conditions were slightly disturbed at the time.

Thanks

John

Interesting and beautiful screenshot! I think part of it is from auroral effects, but the two larger ones are probably just drifting. But what a coincidence, that the other one looks just like aurora borealis in the sky!
Please post such interesting findings also to mwoffsets. Attached my screenshot from tonight, with probable CFFB drifting between 1229.995-6 kHz:

h t t p : / / s k e g n e s s d x . b l o g s p o t . c o . u k

I have uploaded a screen grab of carriers on 1230 from yesterday afternoon.

I relocated my flag so it was pointing more to the north, hoping to receive more in the way of high latitude DX. It is currently set around 350 degrees. This has improved KBRW's carrier. I also checked 1230, looking for CFFB in Iqaluit in the Canadian North West Territories, a station I have identified here two years ago using a northerly flag antenna. Note the unusual waveform slightly to the left of centre. This might be CFFB, but note how the waveform twists around like an auroral arc. Another carrier also exhibits this effect, slightly to the right of centre and at the top of the waterfall, but has a much wider arc.

Can anybody explain what is happening here? I am guessing it could be the effects of auroral conditions, affecting carriers arriving from more northerly latitudes as conditions were slightly disturbed at the time.

Thanks

John

Thank you Mauno.

I will post this to the MW Offsets group.

I will also try to link my screen grab in with this post this time. I used to be able to attach screen grabs easily at one time but Yahoo seemed to change something and it became impossible.

It is interesting to watch the transatlantic carriers fading in too. So many of them all well below audio level. Don't you just want to know what stations they all are!

I haven't calibrated Perseus so don't take the carriers as exact. I have tried to do this many times and failed, though I managed it successfully a few days ago thanks to help from Stuart H but I didn't realise the calibration needed re-doing every Perseus is activated. It's probably pointless me doing this anyway since there is constant receiver drift dependant on what the computer is doing.

Cheers

John

Thank you. I don't understand, why the calibration doesn't hold in your setup. Do you let Perseus warm one hour before checking? I check maybe a couple of times per month and usually find the difference 1 Hz at 15 MHz, often leave it like that, because it is so small.

The Perseus is often left on for days at a time. As I always understand it, it is my computer which is responsible for any drifting in the Perseus.

I know calibration using WWV 15 MHz or 5 MHz is preferred but I can never receive these so I use BBC 5 Live on 909 kHz as a reference. This is supposed to be accurate. It's no good though if I always have drift.

As for the calibration method, I have followed instruction in the Perseus manual and on a YouTube video. It's the same procedure but never works for me. Stuart Heathcock explained the method hew uses on a live chat and worked first time. Sadly, the calibration was lost when Perseus was closed down.

It's probably me who is doing something wrong.

OK. But as you surely know, even turning Perseus to replay makes it get cold and rewarming is needed. Strange, if the computer causes the drift.

Could you please describe his method more exactly? If it involves correcting AdcSampleRate value manually in the registry, then one reason might be that you do it, when Perseus is on. It must be done, when off. Otherwise Perseus will overwrite the changed value when closing.

Better use 9996 or 14996 from Moscow, they are strong during the day.
I use them during Band1 Es, and get them even via my B1 antenna.
But they have a continous carrier only at certain times per hour.
When they pulse you'll see "sidebands" while the carrier is the stronger one.
In my case for Winradio I use autocalibrate (SpecLab and .xrs plugin) and get
it calibrated much better than doing it manually, for 50+ MHz that makes a
difference.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.

Thanks Jurgen. I just checked for 9996 and 14996 and see the pulses and sidebands clearly. I don't know how to stop my computer causing Persues to drift though. Most of the time I am carrier monitoring I leave the computer to get on by itself. No other programmes are being run, so it could be changes in temperature due to thermostat controlled heating. At least, this is what I have read.

I was more curious about those auroral like visuals in the screen grab. Have you noticed anything like this before Jurgen? I was looking for an explanation. If this effect really is due to auroral doppler it would show which carriers have travelled via a higher latitude. Since this system of monitoring carriers is half way to being radar, it would make sense.

Thanks

John

Bingo!

The method you gave me was simpler than that explained in the documentation Stuart. Yours worked too!

I did a search back through our chat and found your instructions. I presume Perseus should be in AM mode first.

Tune to 909 kHz
Set bandwidth to 0.8 kHz (Filter window)
Click "Center"
Double click exactly on top of centre spike (Filter window)
You should see freq display change from 909.000 to something like 909.008, for example, then click "Cal" button and the freq display changes to 909.000

I did this but found the Cal button was inactive, so I clicked CalClr first and repeated the procedure and the Cal button became active. Bingo!

909, 9996 and 14996 are now all 100% accurate. All I need to do now is try and stop the existing drift, though I doubt that will be easy.

It depends on the room temperature also, Perseus is more temp dependend than Winradio. When I warm up the room in the morning I do see it in the spectrum. My Perseus after warm up is ok for MW, for 50+ MHz it would be much worse.

> I was more curious about those auroral like visuals in the screen grab.

I think your waterfall scrolls too fast.
I get the same type of smearing in Speclab when I let it scroll too fast.

You can do the same with a 'normal' waterfall in Perseus, increase the speed to max and you'll see it.

I never let Perseus run with the resolution that you used, so I don't know what speed is wise, and it takes ages to find out

Geomag disturbance cause the traces to get fuzzy (wide, unsharp), Paul Crankshaw recently posted some examples. But yours looked more "shiny", due to the speed

These scrolls are made using the slowest speed Perseus can offer. I
don't think they need to be any slower.

I understand what you mean about the smearing effect, but all the
carriers would exhibit the same characteristics if this were the case,
whereas they clearly don't. It's an odd one.

> I never let Perseus run with the resolution that you used, so I don't

It takes hours to fill the waterfall window. Typically five to six hours
I think.

It is interesting how our grabs differ slightly, bit I believe I am using the same settings exactly as Paul.

I will monitor 1230 again tomorrow to see if the same effect occurs.

Thankfully, today I calibrated Perseus and did not see any drift. I have more grabs if anybody is interested but they are nothing unusual.

Thanks and best wishes

John

Glad that you got it work. Yes, AM it must be, because - this is the worst point in Perseus software - the center frequency goes outside the screen in SSB when using deep zoomings.

I prefer the larger screen, because then I can use wider span and the the screen updating is faster. Please check these instructions and the video and tell me how it could be said or showed clearer.

Choose AM, Zoom, 6 kHz filter, 0.196 kHz span
Click Tuning - Center (if not lit)
Tune to your favourite calibration frequency
Click CalClr
Double-click on the carrier of the calibration station on the big screen
Adjust the last fq digit, if necessary
Click Cal

> I was more curious about those auroral like visuals in the screen grab.

I think your waterfall scrolls too fast.
I get the same type of smearing in Speclab when I let it scroll too fast. You can do the same with a 'normal' waterfall in Perseus, increase the speed to max and you'll see it.

These scrolls are made using the slowest speed Perseus can offer. I don't think they need to be any slower.

I understand what you mean about the smearing effect, but all the carriers would exhibit the same characteristics if this were the case, whereas they clearly don't. It's an odd one.

I suppose Jurgen meant to say too slow. I also seldom use so slow waterfall. Now I did, just to get comparison. The screenshot below, which shows CFFB drifting at least 1 Hz, but there are many other stations higher, drifting more. I don't think your system has more rx-generated drifting than mine, I also seem to have some, when go to so deep resolution. There may also be some Doppler shift visible, when the transmitter sunset greyline is reached.

Geomag disturbance cause the traces to get fuzzy (wide, unsharp), Paul
Crankshaw recently posted some examples. But yours looked more "shiny", due to
the speed

It is interesting how our grabs differ slightly, bit I believe I am using the same settings exactly as Paul.

I think the two most beautiful signals have clear transmitter drifting, but maybe the auroral look in them is really caused by auroral smearing/widening of the signal. It will be interesting to see, if you have the same tonight, when no disturbance is reported.

I tried to follow your settings as long as possible, but still the look is different. What settings do you have for Watefall AGC and Mode? I have Auto2 and Legacy.

73, Mauno

I don't have the url of your screenshot anymore, but I do remember that the "tilted" traces showed a vertical smeariness (can't find a proper word for it). That happens when the scroll runs fast, *but* I also remember your waterfall looked very clean in the non carrier areas (no noise visible), compare it against Mauno's shot. That is caused by a too high averaging, that would also explain the "vertical smeariness", even when you use low (= proper) scroll speed.

Sorry that I did not realize the absence of noise earlier.
I once played with the averaging slider on 30+ MHz to get the noise down, but found that the wanted carrier traces really looked ugly and had no sharp start/stop anymore, so I reduce averaging to a small value

But in this case the scroll ran *slow*, the slowest possible speed, see
the time stamps:

But averaging shows like being totally off? Or John, did you switch
averaging off at the end of the session?

I never use it in the main screen, I don't want to lose any sharpness.

Mauno

It must have been on earlier, because no noise is visible.
Also the "sine-shaped" traces show a vertical "shade"
That cannot happen, because a carrier can only be at one spot at a time.
These "shades" show up when you use low pass filtering (= averaging)

> I never use it in the main screen, I don't want to lose any sharpness.

True for this zoomed-in mode.

But my case was 30+ MHz 1600kHz wide, with weak signals. Without averaging I
see a lot of noise, that gets well reduced when using a small amount of
averaging

There is still a lot for me to learn about getting the best resolution
and I don't feel too much inclination to take it much further. I ought
to get the best out of the system, agreed, but it becomes a challenge.

It seems people have different preferences regarding settings anyway. As
for the "averaging", I was told these should be switched OFF. I don't
know what effect these settings would have on the waterfall though.

I will look at your other emails now.

Thanks

John

I have used these instructions before Mauno but they did not work for me. I looked again today and simply do not understand how this should work. It is very different to the method I used yesterday.

This won't be of any use, but I tried to deliberately de-calibrate Perseus so I could try the method shown on the YouTube video, but that didn't work either. Sorry but you will have to accept that I am just not capable of grasping the finer points of this. I did try but I just get confused. Maybe it's old age.

Thanks anyway.

Beautiful scraan grab Mauno. What a lot of carriers!

My waterfall AGC is set to "AGC2".

Waterfall Mode is "v2.1h"

I will attach a screen grab.

John,
why don't you play with these settings to see their effects and get a feeling
for it?
After all that's a brain for: learning, learning :-)
A tired brain means, you didn't feed it enough. :-)

You are absolutely right Jurgen. But there is lots to do here. Work has taken on a new meaning recently as I have become self-employed again. We have also recently welcomed ten, yes TEN Rottweiler puppies into the world and this in itself has become more of a full-time job than we could have imagined. I still relax with radio but it is a struggle at times.

Having a better understanding of Perseus is another one of those things which I hope to delve into more deeply soon. Naturally I appreciate all the help offered here and will do my best to 'keep up'. :)

Not a single carrier on 1230 so far today, so I am unable to post another grab for the moment. 680 has a carrier, presumably KBRW, but conditions are absolutely dire.

I will try again later elsewhere.

3450. Re: [skywavesmw] Carriers/Conditions

Yahoo group: skywavesmw
Date: 2012-12-12 19:28:26 UTC
From: John Faulkner, Skegness
Topic: 3422 Message: 3450

This is odd. I now notice that I have a some kind of steady, spurious carrier on virtually all frequencies I have monitored in the last two days. It always appears absolutely central, i.e. at .000 Hz on the waterfall. There is no signal variation or other effect so this is clearly not an AM carrier.

This also coincides with an increase in general noise levels since moving the flag to the north. Since I am almost pointing at the bungalow I am getting much more interference, though I have yet to discover what is causing this. It's not the nearby street lamp and I haven't discovered anything indoors which it could be, so far. It's strong enough to mask a lot of carriers however.

Overnight I note conditions have deteriorated quite severely, but two stations got through quite well just before local sunrise: 1470 XEAI and 1540 KXEL - these despite a lack of regulars like CJYQ and WINS. Very unusual. Conditions remain VERY quiet but something else is obviously at play blocking signals.

Good DX!

OK - I just discovered a duff connection on the flag. No wonder things were so dire/no carriers.

3452. Skegness Log: 12-12-12

Yahoo group: skywavesmw
Date: 2012-12-13 20:42:38 UTC
From: John Faulkner, Skegness
Topic: 3452 Message: 3452

1470 0400 MEX XEAI-AM Radio F?rmula 3, M?xico D.F/Granjas Esmeralda
(dif) Presumed with Spanish songs
and rock and roll classics. Weak to fair levels
8904 km

1540 0500 USA KXEL, Waterloo (D) (IA) 15-40 KXEL Waterloo, Cedar Falls.
www.kxel.com ID. No ABC News
at this time! 6546 km

Not particularly great conditions on medium wave for the 12th, but I was
surprised that KXEL was the only North American station to get through!
Mostly I just wanted to have a log for that magical date "12-12-12". I
must have missed the end of the world. Did anybody else see it? ;-)

I forgot to attach the recording of WWVA 1170 yesterday. Here it is:
https://www.box.com/s/r8ajwgfsz9oru9mudp4u

Good DX!

John Faulkner, Skegness, Lincolnshire (JO03dd) 1m ASL

3453. For Sale - Steel Interlocking Aerial Poles

Yahoo group: skywavesmw
Date: 2012-12-14 17:22:23 UTC
From: John Faulkner, Skegness
Topic: 3453 Message: 3453

I have seven strong interlocking steel poles, suitable for mobile antenna use. They are 6 feet long each, so that's 42 feet in total. I have had them for a couple of years but never actually used them. They cost me almost ?100 then but I will accept ?30 if anybody is interested. They must be collected from Skegness however due to their length. I may be able deliver but that depends on the location.

Thanks

John

3454. 1440 Khz Unid

Hi All,

Been a while since I've posted (Due To Work), and as John as stated conditions have been a little hit and miss of late on MW US DX, still managed a few new catches, so can't complain to much.

It's worth mentioning that the X Band seemed to be quite good from 5.00 utc, lot's of signals that I'm going to check out.

Ok, can anyone ID this station for myself, it may even be European or latin American, but being that my knowledge of the Spanish is limited, I thought I would chuck it in the ring !

It was captured on the 9th December at 03.00 utc , 1440Khz

https://dl.dropbox.com/u/91837451/1440Khz%20Unid%2009%20dec%202012.mp3

Topic: 3455 Message: 3455

Following my posting of recording of 3945 received this from S.Hasegawa via

DXLD yg

Dear Mark,

It's a closing announcement of Rdio Nikkei 2.

At 1.35

"....JOZ4 3.945MHz kuchusen-denryoku 10kW, JOZ6 6.115MHz , JOZ7 9.76MHz
kuchusendenryoku 50kW de ohkurishimashita"

Here is the original post. Perhaps the carrier which remained was
Vanuatu ?

Hi Everyone

Any help much appreciated.

Listening on 3945khz this am in the hope for Vanuatu, recorded this. The
audio went off at 8.00ut. A sight carrier did remain. Nikkei 2 also listed
here but to go off sooner, and Vanuatu later. Perhaps propagation dropped
at
that time to seem as though off air. The recording is up to 8.00ut when
disappeared.

OM audio better after 1.05 on recording

Nikkei 1 on 3925 was coming in weak but clear also

I think you have Russia there Damien but I would rather somebody else confirmed that. Radio Zvezda, St Petersburg is listed.

The station underneath sounded English At first but on second listen I think it was more likely Spanish. I couldn't begin to guess who that might be. There isn't a lot to go on there, sorry.

Good DX!

Thanks Dmitry,your a star!
And thanks John & Stuart, it's funny what you can stumble over, as 1440Khz, it can be quite a pick & mix frequency.

Not sure if you guys did any overnight recordings ? 1660 & 1690 was certainly a pick & mix, managed to ID WQLR 1660 "The Fan", gave up on 1690, just couldn't get the right peak.

What time did you have WQLR Damien?

North America is trying to recover but is doing so very gradually. Only stations of interest here overnight were:

1590 0800 Gong/large bell chime on the hour. -5 hour time check. AP Network News.
1290 0600 CBS News jingle punctuating the splatter.
1470 0500 Rock & Roll station. WLAM?

1540 had presumed CHIN dominant, rather then the usual KXEL.

Still going through my recording so hopefully something else will show up.

HI John,
Sorry for the delay on the reply, just checked the logs on my other pc, I heard WQLR early this morning 15th Dec at 07.01 UTC, a big clue is they are the only "Fox Sports" channel on 1660Khz, the other sports channel is "ESPN", it's worth pointing out this was a weak and mixing with others.

Let's hope tonight brings some success.

Thanks Damien.

I had a listen around that time but don't hear much. There are two stations there but extremely weak. One sounds like sports but that's about the best I can do - "sounds like".

Thanks anyway.

3465. CJLO 1690khz Unid

Yahoo group: skywavesmw
Date: 2012-12-16 11:17:03 UTC
From: Damien
Topic: 3465 Message: 3465

Hi Folks,
Just thought I would ask for a 2nd opinion, I believe I caught a ID during this recording for CJLO on 1690Kz from Montreal at 06.27 UTC this morning 16th Dec.

Yet again the x band got busy from 05.00 utc, lot's of static, not sure if it's the neighbours central heating, or a storm on it's way. Still got more to listen to later today, but the signals seem a little louder, than yesterday.

As usual let me know your thoughts

https://dl.dropbox.com/u/91837451/CJLO%20%20unid%20%201690khz%2016%20dec\

Nice signal! I checked my 0500 and could only hear very, very weak music. No chat.

You definitely have CJLO as they give out their phone number at 1:29. 514 848 7471. 514 is the area code for Montreal and although I couldn't see that phone number on the website it is mentioned on their Facebook page, though you'll have to search to find it.

Sounds like thunder storm static you have their.

Also check 1510 for WLAC ID at 0700. This was dominant over WUFC at the time. It was the only thing of interest in what was another very poor night - despite continuing very quiet conditions!

Good DX!

John

Thanks John for your help, yes conditions are a bit strange at the moment,although I have to admit, I've been hearing new signals,and the normal powerhouses,are not so needle bending.

I struggle to understand all of the propagration reports on solar activity.

Perhaps your good self or any other Skywave members can educatate myself, I understand that for MW, we need low A & K levels, and a low sunspot numbers. I not sure what we are looking for on Solar Flux, a high or low number?

I tend to use the BDXC webpage for forcasts, although there forecast is for 10Mhz and below on lower frequencies, and because this seems to be such a broad range of frequencies, I've noticed that it can be hit or miss. Is there a more in depth, or is there another factor that I have not taken into account of ?

I will certainly check out 1510Khz later,don't think I've ever caught WLAC

Thanks Again John, I will drop back in later if I get of interest from last night sessions.

A very quick and rushed pile of notes which I hope will be of use.

I'm no expert (I think most of you will know that by now) but the general rule is "quiet conditions" are better.

In very simple terms, "quiet conditions" mean low levels of solar radiation in the upper atmosphere. The sun throws out all kinds of radiation at us and any earth-directed activity is largely drawn to the polar regions because of the earth's magnetic field. When activity is low, lower frequencies propagate better. Signals are able to travel further north because of smaller amounts of disturbances at the poles. When conditions become disturbed, the polar path starts to close up. That's not good for the kind of higher latitude reception most UK DXers want, i.e. North American transatlantic of far eastern reception. The more disturbed conditions become, that northerly path all but closes up and signals may become enhanced along more southerly paths - or not at all, as is often the case.

The K indices are a measurement of the levels of electrification in the ionosphere. Generally assume that the higher the figure, the worse the conditions, though this isn't always the case. The A index is an average of the eight daily K indices.

Nothing is simple: While the above is true in some ways, you have the kind of conditions we have now where things are so quiet yet still hardly anything gets through. Some refer to this as the Midwinter Anomaly.

Usually, one of the best times to catch something rare and exotic is when conditions have been quiet for a few days and a sudden solar disturbance hits us. That initial impact can enhance conditions briefly. The bigger the impact, the longer it takes conditions to settle down again, even if they do immediately return to being quiet. Think of the "stone being thrown into a pond" analogy. The ripples need to die down.

It's a general rule of thumb and some stations appear to defy it. *There are other elements involved which can destroy DX reception.* We even have impacts of radiation from other suns from time to time.

I generally refer to this site for forecasts:
http://www.solen.info/solar and this one
http://www.irf.se/Observatory/?link[Magnetometers]=Data shows if there is any solar disturbances at higher latitudes. Not the black line on this one too - when it drops well below -1000, there may be a possibility of seeing aurora at mid latitudes with these lower negative values.

Hope that is of some use. Anybody else who wants to add anything or comment, please feel free.

John

3470. MF Propagation

Yahoo group: skywavesmw
Date: 2012-12-16 13:29:30 UTC
From: Satnipper
Topic: 3465 Message: 3470

You can't accurately forecast MF propagation by looking at the numerical indicators. I think a good analogy is with Sporadic E. We know the season is from May to August - though it can start in April and last into September/October. There may be upper atmosphere wind shear and thunderstorm atmospherics associated with the phenomenon but you cannot predict any given day will have an opening(s) or not.

In an analogous fashion MF propagation between UK and NA seems to have a correlation (the nature of which is complex) with low A/K values and the DST index. Solar flux is directly related to the number of sunspots and very generally the the bottom of the 11 year cycle is better than the top which is where we are now (though this cycle is very poor). The path to SA on the other hand may be more correlated with a high A/K.

However you cannot predict a "good" night by looking at the figures alone - MF propagation is just not deterministic. Luckily with the Perseus we don't have to worry about this- just record every night and see what happens. Simples!

Cheers

Stuart

From: John Faulkner, Skegness
Topic: 3465 Message: 3471

That's right. Nothing is set in stone, nor simples, but with medium wave we have the 27 day solar rotation cycle which can be useful. If conditions are quiet on day one, then 27 days later they could be quiet again. Of course some other solar activity could have developed on the sun in the meantime which will knock out the reception in 27 days time. This situation would be more useful during solar minima than maxima.

Regarding making predictions, don't forget ace MW DXer Barry Davies in Carlisle who has used the solar indices very successfully over the years. He created patterns using the solar data leading up to the time of a logging. No, it's still *not* 100% guaranteed, but it DOES work a lot of the time. Once again, this method is more reliable during times of solar minima.

Have you been comparing the meerkat Stuart?

Conditions where yet again great here at my QTH from 04.00UTC onwards, certainly the X band was really busy.

2 x unids if anyone can help ID ?

1st one is on 1470Khz, but also mentions 870khz, this is a nightmare channel for myself due to bleed over from another freq close by, so I've never had a ID on this one.

https://dl.dropbox.com/u/91837451/1470khz%20unid%2004.30%20utc%2018th%20\dec.mp3
<https://dl.dropbox.com/u/91837451/1470khz%20unid%2004.30%20utc%2018th%2\0dec.mp3>

And lastly possible latin American on 1600Khz,there is a ID, but I can't quite make it out

https://dl.dropbox.com/u/91837451/1600Khz%20Unid%2005.00utc%2018th%20dec\.mp3
<https://dl.dropbox.com/u/91837451/1600Khz%20Unid%2005.00utc%2018th%20de\c.mp3>

Had a few 1st timers for myself last night, CINA 1650,WWRU 1660 and I'm pretty sure there is more to be heard ,but I have simply run out time LOL!

Ok, time to set the Winradio for tonights session.....Simples!

Subject: [skywavesmw] Re: CJLO 1690khz Unid

Thanks John for your help, yes conditions are a bit strange at the moment,although I have to admit, I've been hearing new signals,and the normal powerhouses,are not so needle bending.

I struggle to understand all of the propagration reports on solar activity.

Perhaps your good self or any other Skywave members can educatate myself, I
understand that for MW, we need low A & K levels, and a low sunspot numbers.
I not sure what we are looking for on Solar Flux, a high or low number?

I tend to use the BDXC webpage for forcasts, although there forecast is for
10Mhz and below on lower frequencies, and because this seems to be such a broad range of frequencies, I've noticed that it can be hit or miss. Is there a more in depth, or is there another factor that I have not taken into
account of ?

I will certainly check out 1510Khz later,don't think I've ever caught WLAC

Thanks Again John, I will drop back in later if I get of interest from last
night sessions.

Damien

Nice catch John,
I just can't seem to get a ID on this one, although I can't certainly hear WUFC, WLAC just doesn't seem to peak at the right time for me, I will keep trying!

I would say 1470 is WLAM and the 870 reference is to WLVP.

1600 could be WUNR which has SS at 0400 UTC but I don't hear an id.

Subject: [skywavesmw] X Band & 2 Unid

Conditions where yet again great here at my QTH from 04.00UTC onwards,
certainly the X band was really busy.

2 x unids if anyone can help ID ?

1st one is on 1470Khz, but also mentions 870khz, this is a nightmare channel
for myself due to bleed over from another freq close by, so I've never had
a ID on this one.

https://dl.dropbox.com/u/91837451/1470khz%20unid%2004.30%20utc%2018th%20dec.
mp3

And lastly possible latin American on 1600Khz,there is a ID, but I can't
quite make it out

https://dl.dropbox.com/u/91837451/1600Khz%20Unid%2005.00utc%2018th%20dec.mp3

Had a few 1st timers for myself last night, CINA 1650,WWRU 1660 and I'm
pretty sure there is more to be heard ,but I have simply run out time LOL!

Ok, time to set the Winradio for tonights session.....Simples!

Doing a search on True Oldies Channel on am 870 an 1470 you get what Stuart said: Your 1470 ID is WLAM and the 870 mention is WLVP.

I am not sure of the 1600 station as Radio Mexico was supposed to be on WUNR at the time according to their schedule. It doesn't sound like Radio Mexico (to me) nor does the spanish accent sound to be from Mexico. The accent sounds more central or South American to me.

3480. 1520 WWKB on portable radio

Yahoo group: skywavesmw
Date: 2012-12-22 08:40:51 UTC
From: pe1etr
Topic: 3480 Message: 3480

Hello all,

To celebrate the World not ending yesterday, I bought a new
portable radio. Actually it is a discontinued Sangean PR-D1. It is rather
good on MW (and LW)-I really bought it for RDS on FM. This morning
I got my first ever TA on any portable I've owned on this Sangean. I rec a good peak and
will post it later. I haven't yet worked out how to set it tp 10kHz spacing so it was set
to 9kHz.

Peter,

Wow! That's an amazing radio. I like the idea of a portable (not needing a large flag antenna), to receive TA.

Please let us know if it's possible to achieve 10Khz steps. If so, I'll look out for one of these for myself.

73s,

Chris (M6NDT).

Chris,

Thanks. It was quite a surprise.

Two different MW tuning ranges are mentioned on the back of the radio and in the user manual, but there is no indication how to switch between the 9kHz and 10kHz tuning steps.

The bandwidth filter is a little wide, but not too bad. The sensitivity is very good.

Peter

Topic: 3480 Message: 3486

HI Peter,

I'm sure there must be some way to change the frequency step on the Sangean radio.

Your email prompted me to have a look at my Hitachi WorldSpace radio (KH-WS1). Of course the WorldSpace part of the radio is more or less redundant now, but it does also have FM, MW and SW1/SW2.
Looking at the instruction manual, it was easy to change MW to 10Khz steps.
I'm now listening to 1520Khz and can hear the 1Khz heterodyne whistle, so here's hoping the receiver front-end is as sensitive as your Sangean.

73s,

Chris (M6NDT).

3496. Re: 1520 WWKB on portable radio-audio recording

Yahoo group: skywavesmw
Date: 2012-12-25 11:28:54 UTC
From: Chris Thatcher
Topic: 3480 Message: 3496

Hi Peter,

I've been looking at various Sangean models (can't find yours), and they seem to have a common method for changing AM step from 9Khz to 10khz. Try the following ->

"To change the AM tuning step from 9 kHz to 10 kHz,
proceed as follows,
1. Press Tuning UP button and
hold, meanwhile press the Power button and hold
2. Until the display shows SEP 10 then shows 520.
3. The AM frequency step is 10kHz now.

Or

To change AM band tuning step, please follow
below steps.
1. Change the AM band tuning step from
9 kHz to 10 kHz.
When radio is OFF,
press and hold Tuning UP button then
switch on radio by pressing Power On/Off
button until LCD display flashes 10 and
then 520, indicating AM step has been
changed to 10 kHz tuning step."

Both the above are taken from Sangean downloadable user manuals.

Let me know if this works with your radio.

Merry Christmas.

73s,

Chris (M6NDT).

Hello Chris

Thanks for trying, but those suggestions didn't work,
however, as I have a printed manual in 5 languages, I looked more closely at thw
non-English versions. Apparently the Dutch and the French are interested in
changing MW steps but not the English, Germans and Spanish!

Anyway my basic Afrikaans enabled me to work out the
Dutch instructions (before I saw the French which might of been OK too)

Ironically I'd got the correct button before but didn't press it for long enough.

Just in case someone else finds a time-warp radio shop...

When the radio is switched on and MW is selected, press and hold the "Display" button for 4 seconds. When you see the step size displayed, release the button then give a short press of the same button. To change back repeat.

Hi Peter,

I'm glad you managed to read the Dutch manual and sorted out how to get 10Khz steps.

Here's my Hitachi WorldSpace radio ->

http://www.farnell.com/datasheets/15419.pdf

I've managed to change the above radio to 10Khz steps, but the IF filter is as wide as a barn door!

I now need to brush up on my AM loop skills and build one. I used to have a "frame" aerial (with tuning capacitor) for MW reception, but I've forgotten the number of turns and gauge of copper wire etc. If I still had this "frame", it would be ideal for TA reception, when used with the Hitachi.

Chris (M6NDT).

> Seeing that frame antenna brings back memories.

Chris,
I used it a lot when I did not know what a beverage was. :-(

Also later I used it in my apartment, first that worked well, until more & more electronic devices with uP's got used by my neighbours above and below me. At the end there was no more quiet spot in my apartement left over.
So eventually I moved out and live now in a house without close neighbours, and much space for EWE's and beverages, I now use the 1x1m frame only for mobile tracking of noise sources.

Jurgen Bartels Suellwarden, N. Germany

3502. Røst 675KHz goes silent

Yahoo group: skywavesmw
Date: 2012-12-25 22:30:25 UTC
From: Christian Stödberg
Topic: 3480 Message: 3502

On 31:st December 2012 Norkring will shut down on the behalf of NRK the medium wave transmitter Røst on 675KHz. Then only Ingøy on 153KHz and Langyearbyen (Svalbard) on 1456KHz will remain. What will happened to Røst is unclear. Maybe it will get the same destiny as Vigra - demolished though it was installed as late as in May 1999.

Vigra (630KHz) covered the North Sea and together with Kvitsøy (1314KHz) which also covered Europe. Røst covers the north east part of the Atlantic Ocean. Ingøy covers the Barent's Sea and will be kept because it's harder with satellite radio so far north. Røst and Ingøy are aimed for the fishing fleet.

Hello Chris,

Thanks..so am I :)

I was the other person who bought a WorldSpace
radio :)

Actually it was very useful in the African bush back
in the days when WS had 40 free to air stations.

Have you thought about using your Blaupunkt Casablanca CD52
for MWDX? It has selectable 9/10kHz steps and the AM IF is not vastly wide.

Hello all

Unfortunately just the usual suspect this morning. Still
it is nice to have the correct step.

There are other videos too of my Sangean PR-D1
portable radio in action.

www.youtube.com/user/pe1etr

This gem of a radio from the late nineties was found in stock in my local radio shop,
unused and boxed.
If you have a local radio shop with a slow turnover
of stock you might find one too.

Hi Jurgen,

I am lucky to live in a detached bungalow (no adjoining neighbours), so a MW frame antenna should work OK for me.

I know which electrical appliances cause interference in my building, so they can easily be switched off (satellite, DTT receivers etc). Surprisingly, my lap-top does not cause interference more than 1 metre away (even when its Switched-Mode PSU is connected).

73s,

Chris.

Hi Peter,

You're right, I could use the Casablanca CD52 for MW reception, but:-

1) It would need to be connected to a directional Frame or Flag antenna (which I don't have at the moment).

2) The Casablanca CD52, when set to "Tuner Area = America", also affects FM reception, and only tunes the American FM band (88.1, 88.3, 88.5 etc), missing all the even frequencies (88.0, 88.2, 88.4 etc).

Living on the West side of the UK, I think your chances of TA reception (across the sea) are greater than here in the East, (although John, in Skegness, seems to do OK).

73s,

Chris.

My problem here is big splatter from European signals. The sea path from here into Europe allows those signals to be received more strongly, often resulting in me having to use very narrow IF filtering if I am to hear anything at all. This can be as narrow as 1kHz, which makes any audio almost unintelligible.

The sea path also seems to offer advantages with transatlantic reception in some ways too. If conditions are good then the northerly path opens up and reception of stations from the Great Lakes and westwards starts to pushes through. Consider recent loggings from here (2010 and 2011) from Alaska and the Canadian North-west Territories. Meanwhile regular east coast DX from the eastern USA and Canada is never that great because the signal has more land to cross and so poor to average conditions just don't do much here.

One thing I plan (hope) to do in the near future is run out a beverage along a nearby beach, pointing NNW and up over the pole. It will be very interesting to see if this throws up something more exotic. This is obviously conditions and time dependent - and I don't seem to have much of either lately.

Good DX!

John

3510. Medium Wave Notes

Yahoo group: skywavesmw
Date: 2012-12-28 11:11:08 UTC
From: John Faulkner, Skegness
Topic: 3510 Message: 3510

Medium wave conditions were better for the first half of the morning, taking a dive after 0300.

The usual east coasters were difficult, apart from 1010 WINS, 1130 WBBR, 1510 WUFC and 1520 WWKB having fair signals.

Conditions didn't seem to be good enough for the following:

1120 KMOX St Louis MO Fair, presumed at 0300
1390 WEGP Presque Isle ME. Fair 0100
1540 KXEL Waterloo IA Fair 0000, 0100 & 0200, etc. ID and ABC News (often mixing presumed CHIN, which never IDs on the hour lately)
1590 WAKR Akron OH Weak 0200
1600 WUNR Brookline (West Boston) MA Fair/Good 0100, mentioning wunr.com

Geomagnetic conditions continue to be very quiet and are forecast to stay quiet for the rest of the year! /S//ounds good, doesn't it!/

The strongest and most consistent north American here at the moment is 1510 WUFC and can peak to good levels. The second strongest signal here can often be 1540 KXEL, which used to be considered an exotic DX catch fifteen years ago. It's here every night this season.

/Off topic, please disregard my skywaves.info and g1vvp.co.uk domains now. Dataflame, the hosts, have suspended my account for some reason. I pay by direct debit so I don't know what has happened. In view of their complete uselessness I doubt I will bother to continue with them. All hosting companies seem to have their problems and while Dataflame have mostly provided a good service, they have not been without their problems. Good riddance//.//
//
//I am still having problems with mail forwarding between Yahoo and Gmail. Now it seems the majority of group messages are *not* being forwarded. The system is useless as it stands and I am hardly seeing any group messages unless I check webmail. Do I expect anything to run smoothly where computers are involved? Of course not.//That would be unreasonable!
/
Good DX!

John

Hi Chris,
I actually used to own the very same unit, I sold it on back on to ebay, as in practice I didn't find it of benefit for DX use.

Of course it depends on what you intend to use it for, I personally found the unit worked well on medium to strong signals,acting almost like a Dolby Unit. It did help on mild channel splatter, but if you are hoping to make a weak signal clearer,it simply won't.

I also found the unit's had poor audio, good for speech,poor on music, and not very loud. Build quality is not the best, and the adjustment knob for the dsp will have you going crazy,as you need a screwdriver to adjust it!

Sorry to sound so negative,I'd imagine if Into radio ham listening,then I would have loved it, so please don't take my views as a personal attack, they are my views from living with the unit, and I would hate for someone to purchase one for the wrong reasons.

From: Chris Thatcher
Topic: 3512 Message: 3515

Thanks Damien,

It's good to hear from someone who has already owned the product.
I wouldn't expect this DSP speaker unit to magically resolve very weak and unintelligible stations. I realise that would be asking too much.

The problem I have at this location is plain, continuous noise (about S5) caused by local interference sources.

In the next day or so, I should be receiving this in the post ->

http://www.ebay.co.uk/itm/330759084496?ssPageName=STRK:MEWAX:IT&_trksid=p3984.m1438.l2648

It should reduce noise somewhat, compared to the long-wire I'm using at the moment.

Depending on how much noise remains, I was hoping the DSP speaker would compliment my receiving system. I'm guessing (hoping) the reviewer has no connection with the seller of the DSP speaker. The results seem pretty good to me, judging by the Youtube video.

Cheers for your observation and comment. The DSP speaker seems expensive, so I won't be in a rush to go out and buy it just yet!

73s,

Chris. Lincoln, UK (M6NDT).

Hi Damien,

My Eton G3 and Tecsun PL-606 are both very good for transatlantic DX. The PL-606 works well because the filters can be switched down to 1 or 2 KHz bandwidth, so you can get rid of most of the adjacent channel interference. It’s spoiled by the soft mute though. The Eton G3 doesn’t have such good filtering, but the sync detector makes most signals very listenable (after I applied the fix for the sync detector). My Degen DE1103 and Tecsun PL-660 also work quite well for transatlantic DX, but the filters are not as sharp so I don’t usually try.

My G3 and PL-606 pick up the stronger signals like the Caribbean Beacon and Newfoundland on 590 and 930 without any help. With the addition of a ~30 cm square loop antenna I can pick up all sorts if I wake up at the right time.

I’ll have to try and get a bit more transatlantic DXing in whilst the nights are long, although generally I have the most success around August and September.

Regards,

Martin

I suffer with the problems as John,WWKB comes in quite good,but due eueopean splash l generally end up using lsb on my winradio g33. Certainly receving it on a portable is a great catch, perhaps you should try 1130khz WBBR.
TBH l have only managed TA on portable on a old Sony ICF7600D using a diy loop,and that was some 27 years ago! I catches improved when l went over to a aor ar 7030 plus, it just goes to show you what is capable these days with cheaper rx's.l find crazy that a lot of us do overnight recordings, and sometimes what John and I receive is completly different,and that can be on the same frequency.
Anyway,enough waffle, congrats on your catch, and let us all know of any more sucess you have.

Excellent David. Nice catch.

After hearing your recording I though "Hmm, I wonder ... " and checked this morning's 0700 file and, to my amazement, there it was! My reception was not as good as yours and I wouldn't have known what to listen for had it not been for hearing your recording. Headphones required but I think you'll agree it's definitely there, painfully weak.

http://www.mediafire.com/?e1ndpge7psw09ac

Thanks for the tip David.

Good DX!

John

Not sure why I used Mediafire there. Box is better:

https://www.box.com/s/ombicyy1543kdq0autxt

I see WCGO is listed with just 2.5 kW at night!!! It's just so weird how the band was really poor overnight. I would never have expected this to poke through.

Great Catch David, just played my files back, and I don't have a cat in hells chance , as my local TX BBC Hereford & Worcestershire is on 1584Khz and to make matter worse,is directly West of my QTH!, certainly I can see a peak,and there is a signal, just too much splash,even on USB narrow.

As John as said, the DX is really strange at the moment,I managed a 1st for myself the other night on 1630KHz KCJJ, and I had CJRS on 1650khz comiing in on a S7 at times,which is a crazy strength for such a low powered tx.

Again congrats David

Hi Peter,

Do you know why heavy rain might boost MW signals?

I need to find some time to do some listening. Usually 1521 is pretty busy for me, as I get a Spanish station, the Saudi station, Flame CCR (which gets out very well considering the power), and more recently China.

Regards,
Martin

Hi all

As there was no rain and no gale-force winds
I took my Sangean PR-D1 portable to the seafront
to experience MW without heavy QRM. Wow! what a
difference a few hundred metres makes.

1071 ARS tent Arabic
1071 IND AIR Rajkot
1575 UAE R Farda withID at 19:00 UTC

www.youtube.com/user/pe1etr

NB one video was uploaded by mistake - The real Rajkot video
has the Indian music

I am using an iphone for shooting videos and upload
direct to youtube- I can't delete videos or amend
headings/ info later.

I think I had 1566 AIR Nagpur but it was faint

Thanks John

I live about 1/4 mile from the sea, but I was
stood at the seafront adjacent to the North Pier. (closed for winter).

Not sure how the Irish Sea helps in receiving India:)

That's close!

It's weird isn't it - this has just reminded me of something: When Oliver came over last year we took a walk to the sea front and he was tuning his Degen DE1103 and had fair reception of City Talk Liverpool on 105.9. There was no tropo at the time! Every time I have taken my DE1103 to the same beach or on to the pier I too hear City Talk on 105.9. Just bizarre!

3539. Skegness Log: 09-01-13

Yahoo group: skywavesmw
Date: 2013-01-09 21:15:53 UTC
From: John Faulkner, Skegness
Topic: 3539 Message: 3539

1060 0308 CAN CKMX Calgary (AB) Classic Country ID squeezed out of the
splatter at 03:08:48
6919 km

1140 0336 CAN CHRB AM1140, High River (AB) Religion over the half hour.
Faded down on all toh's.
Has to be CHRB. No CBC News jingle on the
hour from this
on so definitely not CBI. Good peaks!
6915 km

770 0338 CAN CHQR Calgary (AB) Very difficult in splatter. Finally
heard the call letters at exactly
03:48:51. At 03:30 I heard another partial
ID ... Calgary's ... good evening
I'm (muffled name) on ..QR. Really struggled
with this but conditions fit
6934 km

1470 0400 CAN CJVB Fairchild Radio, Vancouver (BC) Time pips, ID and
Chinese music. Weak to fair signal
but muffled and splattered 7453 km

1070 0406 USA KNX 1070 Newsradio, Los Angeles/El Nido (CA) Presumed.
Rolling news. Mentions of Southern
California and CBS news on the hour but
without the familiar CBS News jingle,
which came around 15 seconds past the hour,
as per web stream. Ten Seventy
Newsradio heard a couple of times - very
weak, KNX muffled. Has to be KNX.
8680 km

1000 0700 USA KOMO Seattle/Dilworth (WA) Presumed. Frequent mentions of
Newsradio, first noticed at 0400.
Possible Komo Newsradio One Thousand ID at
04:00. Likely KOMO (WMVP is ESPN)
7591 km

At last. After hearing precious little from the east coast on my
northerly flag the band opened up to the west coast and Canadian
Prairies this morning. Due to the severe splatter I have to accept some
of the loggings as "presumed", but conditions were strongly favouring
the west coast with nothing at all getting through from the east coast
regulars.

The peak of the action occurred between 04:00 and 07:00.

Good DX!

I am guessing the first one is WGIT Canovanas in Puerto Rico, the most consistent Spanish on 1660. Their ID is "Radio Gigante" but I didn't hear this in your recording. There are also Spanish language stations in Utah and California listed here.

The second one is WQBA Miami with an ID half way through.

The third one is WTAM Cleveland OH with an ID around 13 seconds.

Nice catches!

John

3544. Skegness Log: 10-01-13

Yahoo group: skywavesmw
Date: 2013-01-10 18:16:36 UTC
From: John Faulkner, Skegness
Topic: 3544 Message: 3544

700 0500 USA WLW Cincinnati OH. ID - News, weather and traffic for
... 2013, Newsradio 700 WLW 6292 km

1280 0600 USA WNAM Neenah-Menasha WI. ID - WNAM Neenah-Menasha, a
Cumulus station.
Then ABC News 6178 km

950 0720 USA KJR Seattle WA. Tentative with sports talk. Fair 7595 km

930 0723 CAN CJCA Edmonton AB. Religious talk, then mention of AM 9-30
The Light
before religious songs 6687 km

1250 0728 CAN CHSM Steinbach MB. Lively symphony in parallel with 950
6228 km

950 0730 CAN CFAM Altona MB. Presumed with classical music. Fair and
mixing sports
station. Parallel 1250 at times 6315 km

1040 0734 CAN CKST Vancouver BC. Tentative. Sports talk over other
English talk
station. Both fair signals 7458 km

1140 0759 CAN CHRB High River AB. Presumed with religion. No CBC news
jingle on the
hour on fade so ruling out CBI again. Fair and
slightly low in
frequency 6915 km

1010 0800 CAN CBR Calgary AB. CBC Radio 1 news jingle heard in pile-up
6920 km

Two peaks of reception overnight. The first seemed quite well-defined
between 07:10 and 07:40, then another around 08:00. Some of the signal
strengths were quite good.

I have listed some of the stations as Presumed and Tentative, but all
the conditions, times and formats suggest those stations mentioned. If
only we could identify everything we receive!

There was something on 1000 kHz again after 04:00 but I was not 100%
sure about it being KOMO. It may have been the Chicago station this time
as there were no frequent mentions of "Newsradio" and the speech
intonation heard through the horrendous 999 splatter didn't shout "news"
to me but was more of a softer sports talk.

I like to list only those stations I have positively identified but once again the conditions were such that I wanted to give a more complete picture of what was happening across the band. It really didn't feel like anything like a traditional east coast night.

Good DX!

That one is hard to get here.

Later while I taking a tea break, Alaska improved and 780, 820, 850 got audible, as my DX guest told me.

680 still fading up / down now.

My Perseus is disconnected at the moment as I took it into the wilds overnight to try a North American beverage. Conditions were good and there are still lots of files to listen to so I am now starting to get behind. It's a small price to pay for the good conditions but I need to get back to 'normal' life, whatever that is.

Looks like we are in for another night of great conditions.

Good DX all!

John

Some of these recordings WILL require headphones. I have included one or two of the more regular stations so you can hear the phenomenal strengths they can reach with a beverage.

I have uploaded Perseus files for 07:00 and 08:00 here:

Thanks Mark.

Who would have thought that the east coast would produce DX like this!?
I feel like I am back in the cottage in Sheigra in 1985. :O)

I've got to try this again before the end of the month.

Excellent John! Just goes to show you what can be obtained with a beverage and quieter location.
Last night wasn't as good, and although I've got a few firsts these past days, there has been a lot I just couldn't get ID's due to my locals TX's.
Perhaps I should move to Scotland lol!

Any John, top marks!

Thanks Damien.

The beverage could have been better. It's currently 380m long, or at least that's a rough guess based on using the Ruler option in Google Earth, but it's thin-ish wire and presents more resistance than I would like. I haven't measured it properly but I know it's well over 1000 ohms so better nulling would be possible if I used thicker wire. The problem is that all my thicker wire has either luminous orange or luminous pink coating! The thin wire I use for the BOG is black and so less easy to see. I want the wire to blend in such that I might be able to leave it in place for several weeks, untouched. The termination resistance for a beverage is usually around 600 ohms so I think this BOG could be improved substantially. I need to work on something more suitable for the next season. I am also going to look into erecting a beverage at the field on the other side of the garden again.

True, local transmitters can be a real pest, but even a short BOG or simple flag antenna can easily reduce QRM from the rear and the sides.

Here are the links to the 08:00 and 09:00 Perseus files again should anyone want to experience the band on the 12th:

Oh boy that is lossy. Are sure it is copper?

My relative thin wire has around 10..20 ohm at 300m

Don't believe what other say about the termination R.
Find yourself the optimum.

Mine has 0 ohm, where the F/B is the best, but still far away from what I like.
No idea why it is zero ohm, maybe to do with the soaking wet soil.

The wire I use is quite thin Jurgen. I had no idea until recently that the resistance was so high having always assumed it was adequately low, based on my findings using other, similar wire I've bought from from Maplin. I don't know the gauge but it's obviously too small. I like to hide my wires if possible. It's not copper either.

Remember I am a "Bodgitt & Scarper" man and I admit I lack a lot of the basic knowledge needed for this kind of DX operation, though I now know the BOG wire needs some improvement.

As with the shampoo advert, I just like to "run out the wire and go!"

Probably some pre-disturbance enhancement, which happens even earlier in the north. Both here and at Lars Lahti's northern Perseus 10-frequencies are now empty.

Use black colour to hide it.
I can tell you that out of experience, part of my wire is black. That was a bad decision, it is very hard to find it when it lays on the ground. The other orange is much easier. I will never use black again

Exactly! That's what I want, wire that is not easy to see.

I probably have a couple of km of really thick stranded wire (not copper unfortunately) with pink or orange coating. It's just too obvious. I don't want people to see what I am doing at all. I know where I have laid the thin, black coated wire but I take your point about losing it - something I haven't yet done, thankfully. It's far better to me NOT to see the wire, then I should be able to leave it in place for a whole season without it being seen or disturbed.

I really don't like to be seen running out lots of wire. Our hobby is often considered strange and extreme as it is, without being seen rolling out hundreds of metres of wire along the side of a country lane or along the side of a fen. Perhaps it's different in Germany. Wouldn't people stop you to ask what you're doing? I have had that happen twice so far this season and the hobby isn't an easy thing to explain to somebody, especially when most members of the public here have never heard of amateur radio, let alone BC DXing and beverage antennas.

I admit, I hide myself away. It's easier that way. Am I ashamed of my hobby? Not as all. But I know from experience that people like you and I are often regarded as anoraks, geeks, or unfortunates with some kind of mental disorder. Sad but true.

Sorry if this post is delayed. Lots are lately. What's up Yahoo?

John, you probably saw it way to late, as Yahoo delayed all postings

It was very interesting at 1830z for 590-VOCM
I checked all servers from Scandinavia, Germany, Holland, UK.
Non showed a signal, while I had it loud here.

Seems there was a special path towards me? Sounds very odd!

Around midnight it was back to very low levels, no surpise because at 2100z
disturbance increased, as seen here:

http://flux.phys.uit.no/cgi-bin/mkstackplot.cgi?comp=H&site=lyr2a&site=tro2a&site=kar1a&site=roe1d&site=gdh4d&cust=+Custom+%28above%29+

Certainly, and they bring often the most interesting stations.
Especially in Lapland it sometimes happens, that they concentrate on one
state only and dominants are out.

I have understood this for many years. Often the best DX arrives just before/during the start of a geomagnetic disturbance.

A good analogy is water in a pond where somebody throws in a stone:

Quiet conditions/low geomagnetic activity = a flat, reflective/refractive surface of the water, so signals propagate well; Suddenly, a disturbance arrives, active/storm conditions, etc = somebody throws a stone into the water so it becomes choppy with the initial waves extending outwards = these briefly refract signals from a greater distance becausethe angle of reflection has changed; Disturbance in progress - surface of water messed up and unstable = reflections/refractions less likely as surface is too messed up so less reflective. The greater the disturbance, the longer it takes for the water to level out again.

I hope that makes sense as I rushed it a bit. It's a great analogy and one I have heard many times over the years. I think it fits well.

3583. 1140khz on New Years Eve - Help

Yahoo group: skywavesmw
Date: 2013-01-19 13:27:40 UTC
From: BEAVAN SIMON
Topic: 3583 Message: 3583

I'm madly behind in my checking of overnight recordings and going through 31/12/2012 at 06:00 got this on 1140khz

https://www.box.com/s/w0d24x81kzm9dw64s8ff

It's weak and splatter ridden, but I hear WBXR. I've not seen that mentioned much.

Can somebody with better hearing than me help and give me an idea whether it sounds like WBXR or is clearly something else !

Thanks

Simon

Sorry Simon.

I don't hear much. It's all buried in the splatter. I tried listening for the call letters but nothing comes through to me.

Personally, I haven't seen any mention of this station being logged before. It's listed as 15kW daytimer in Hazel Green, Alabama but silent at night. I really can't see this being on at 06:00 GMT. Their website lacks a programme schedule so I can't see if they do take any other overnight programming.

Sorry. That's what my ears tell me.

Looks interesting Mark. Thanks for this. It's a bit big to risk here unfortunately.

MW conditions have gone down the pan here btw.

Thanks both for listening.

Re-listening to the clip, I realise you must think I am mad to think I can hear anything. The recording isn't as clear as on the Perseus.

On the original I can still hear WBX and a possible R and then there is the type of light non-descript music you get on some religious stations, but I'm giving up now.

It was probably a WRVA announcer with a cold !

3588. BOG wire suggestions please!

Yahoo group: skywavesmw
Date: 2013-01-19 21:10:21 UTC
From: John Faulkner, Skegness
Topic: 3588 Message: 3588

I went to Maplin yesterday to see if they had any wire I could use as a BOG. I wanted something /slightly/ thicker than I already have and there was plenty of (non-copper yet again) black plastic coated wire. I didn't buy any as I couldn't believe how much the price had shot up - ?18.49 for 100m. I need 300m and r Rather than spend money on something which isn't copper, I thought I should look around. There's nothing currently on eBay and I don't know where else to look. So, any suggestions please?

Thanks

John

100m = 11 EUR
buy 3 and knot & solder them together

http://www.conrad.de/ce/de/product/605357/LiY-Schaltlitze-1-x-014-mm-Schwarz-100-m-Conrad;jsessionid=2CF0080B6FBD5639EE7E075CD58A77AE.ASTPCEN01

I'm using a simliar wire

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 90m bev 220°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
http://zeiterfassung.3sdesign.de/station_list.htm

Hello all

I am going overseas and my Alinco and power supply
are too heavy to take with me.

The radio is in as new condition. I am a non-smoker
and I have no pets ot small children with sticky fingers:)

I will include an old but good power supply free.

This radio has an I/Q ouput so it can be used as an
SDR with free software.

Submit serious offers to me via email direct and not to this group.
Plenty of videos on my yt channel showing it in action.

Hi Patrice,

Jurgen is correct, CKNX is a regular here.
Made a slight change with the KAZ antenna today, hope it might favour the West coast a bit more. KOMO has been heard almost nightly aroung 0400, maybe KNX again soon.
Enjoy the receiver.

Pat,

Wiki tells WSBT is CBS
Their web page tells it runs ESPN at night

I guess it could be KMA, that I have heard here in the past and it carries ABC
Never heard WSBT here

It is helpful to check Wiki, details of almost all station are there

Hi Juergen,

reviewing my tape of this morning, indeed there's an interviewed player or commentator mentionning "shenandoah" and "in and out of iowa" which
would nail KMA indeed...
let me run the tape to the end and edit it if positive ID somewhere..

Danke Sehr

3602. Portugal: RTP Antena 1 Miramar (Vila Nova de Gaia) 720 kHz 10 kW - tower collapsed

Yahoo group: skywavesmw
Date: 2013-01-28 22:03:26 UTC
From: Luís Carvalho
Topic: 3602 Message: 3602

Hello all,

According to user "TMG", who reported this info. in the Portuguese Yahoo! Group "Mundo da Rádio" (http://groups.yahoo.com/group/mundo_da_radio/message/781), the tower for Antena 1 in Miramar (V. N. Gaia - near Oporto) didn't survive the storms which affected Portugal mainland two weeks ago. As the tx in Valença (666 kHz) has been inactive since August 2011, MW coverage of Antena 1 in the Northwest of the country is currently much reduced. Re. Valença, RTP 's technical dept. has been delaying this question, because the old transmitter suffered an irreparable breakdown and the public radio is facing budgetary limitations. I hope the tx in Miramar doesn't get the very same treatment as the ones in Madeira archipelago and the tx in Pico da Barrosa (Azores)...

Best regards & 73.
Luís Carvalho

Just a quick note, conditions seem to be back on the up, had a quick listen on X band noticed a good signal 1680Khz and ofther freq at around 07.35 GMT.
Hopefully time to start listening again!

3604. UNID Asia stations from Hawai`i Trip

Yahoo group: skywavesmw
Date: 2013-01-31 21:37:07 UTC
From: kugellagers
Topic: 3604 Message: 3604

A few months back I took a trip to Hawai`i for work and was able to do a little DX'ing at night. I still have a couple of UNID stations on 693 kHz and 702 Khz that I have not been able to figure out.

By playing around with Windows Media Player equalizer settings I am pretty sure the language under the english on the 693 kHz clip is Japanese. If others can confirm it is Japanese then it can only be JOAB 693 in Japan. FYI: the english flamethrower on top is 10kw KHNR on 690 in Honolulu. I was in Volcano on the big island 340 km away.

The second clip seems like it might be Korean or Chinese. If someone who speaks or is familiar with these languages can ID the language it would go a long way to narrowing down the ID of the station. I could at least ID it as the country of origin.

The 693 kHz clip can be heard at:
http://forums.wtfda.org/attachment.php?attachmentid=13196&d=1345609409

THE 702 kHz clip can be heard at:
http://forums.wtfda.org/attachment.php?attachmentid=13197&d=1345609416

Any help is appreciated.

Thanks

John

3605. 1680Khz Bloomberg Radio ?

Yahoo group: skywavesmw
Date: 2013-01-31 23:08:50 UTC
From: damienread@ymail.com
Topic: 3605 Message: 3605

Hi,
Just played back my files last night session, had a really good signal on 1680Khz, however the only ID I could get, and it seems it's simply just carring Bloomberg Radio.
This was during 07.00 & 08.00 UTC, even the adds where national !
Any clues, as I haven't come accros Bloomberg on this frequency.

What was interesting, that the x band only peaked from 7 to 8 utc, and no sign of any east coast stations. I did managed one clear ID on 1660khz at 07.30 TC for KRZI carrying ESPN.

Regards
Damien

Hi Damien.

Apparently it's KRJO Monroe LA. Should have been on 1kW night time power at that time. Nice catch!

Credit to Paul Crannkshaw in Scotland for the info as Topaz just lists them as "ABC Newsradio". Def KRJO Paul says.

Thanks John,
Wow, wasn't expecting that, I will have to post a quick post of a MP3 tomorrow.
BTW I gave your blog a plug on my blog today

http://musicandwires.blogspot.co.uk/

have to say your blog always makes excellent reading, loved the history story of your various BOG locations! Very funny !

3611. Perseus "Expired" Problem

Yahoo group: skywavesmw
Date: 2013-02-01 12:20:21 UTC
From: John Faulkner, Skegness
Topic: 3611 Message: 3611

No listening possible here, partly due to a broken flag antenna, which is not difficult to fix, but more importantly, Perseus has stopped working under Windows 7 on my main machine. I can still run an older version of Perseus on an older laptop, but every time I run Perseus (v4.0c) on my main machine I have a message telling me my trial period has expired. I realise this trial period is for something else and Perseus should still run regardless. I would be well beyond that trial period anyway so I don't know what has triggered this message now. I cannot run Perseus anymore. If I cancel the message, nothing happens - no Perseus!

I uninstalled the Perseus drivers within Device Manager and deleted the Perseus directory so I could start again from scratch. I made sure the "Microtelecom Devices" entry had disappeared from the Device Manager and I removed the "Microtelecom s.r.l." entry in HKEY_CURRENT_USER/Software. I began again from scratch but the same message appeared.

I have also started again and used HDSDR to test Perseus. Nothing! I am guessing the Perseus driver simply cannot be seen. When I run MESTOR recording software, it reports a missing perseususb.dll file.

:-(

John

I still don't know what the problem was but I got Perseus working again.
I merely did a System Restore.

I wonder if recent installation of other SDR software had something to
do with this - namely SDR# and SDR-Radio Console? Odd that they all
worked happily together for a few days, so I am baffled. It seems
Windows 7 became confused in some way.

Thankfully, everything seems to be back in order again.

Thanks

John

A recording of China on 1521. Quite good this afternoon too. Unfortunately I chopped off the ID just after the hour as I was recording with Mestor and you can't hear what you are recording.

Sounds like it's not a bad time to be out with the beverage!

Cheers

3620. WMOB 1360?

Yahoo group: skywavesmw
Date: 2013-02-04 18:21:11 UTC
From: John Faulkner, Skegness
Topic: 3620 Message: 3620

https://www.box.com/s/zr2jz0eb0j7ab2a0ntuo

I've been trying to nail this station all season. Problem is 1360 is so close to 1359 I have to go USB, then I am right next to my local BBC Radio Lincolnshire on 1368, almost pointing at it, so I am forced to use a narrow bandwidth,

I am 90% sure there is a "WMOB" ID at 18/19 seconds. This corresponds with 07:02:43 in real time.

There was soulful Gospel sounding music either side which also went over the hour so I presume this must be WMOB. Maybe there is somebody here who is familiar with their online ID.

Thanks

John

Amazing! Thank you so much Damien! This station has always been considered a real rarity, coming from the deep south of the USA - traditionally one of the most difficult US areas to hear in the UK. Well done yourself too!

I have never been called "Gold Ears" before but I'll take it as a compliment ;O)

I put both our recordings together in a recording, one slightly lagging behind the other, producing an echo. This is something I occasionally do when somebody hears the same station as the echo is usually quite apparent. No echo = not the same station.
https://www.box.com/s/e3498ven4ux8tec9cefw I think the echo is fairly clear in this case.

Conditions weren't too bad, but weren't anything great either. I was just aware of the better-than-usual strength carrier on 1360 and I wasn't hearing WDRC on the hour. WMOB notoriously IDs at any other time BUT the top of the hour. It's probably also the only US Gospel station we are likely to encounter here on 1360. Amazing stuff!

This season continues to throw up some great surprises. I'll post my full log tomorrow.

Cheers

John

Glad I could help out John,
Try 1140Khz WQBA and 1630Khz KCJJ, WPTX 1690Khz, managed to ID all at around 07.00UTC.
I ran out of time lastnight,I'm sure there is more catches to be had, as you said, really strange conditions, and not even a stiff of the usual stations on 930kHz or 1130Khz.

This morning, looked quite good as well, so plenty for us to carry on with!

From: John Faulkner, Skegness
Topic: 3620 Message: 3624

It was interesting again overnight and slightly better, but I'm sure WMOB was still there.

I also posted my recording to the Real DX group and one member thought he could hear the ID, the rest couldn't but gave an interesting account of the station's recent history and usage of power. It seems they have been using their daytime power (5kW) for a while and so have been heard more widely than they would normally. Since they applied for 9k, and were granted this, some speculate that they may even be using that! This would be non-directional, hence the reason why they have been more regular of late this side of the pond.

It's great when we can share things like this. We all benefit in one way or another.

Lots more to listen to from this morning's overnight recording but probably not until later. The log so far at:
http://www.mwlist.org/mw_logmap.php?sort=&datum=2013-02-05&band=ALL&redir=true

Cheers

John

Hi John,
Just finished the 4th tonight, OMG you are correct, there is even more on the 5th,guess I will leave that tomorrow.
Here my list, I tend to log from monthly list, so there were others, a habit due to time, and being a member of the BDXC !

1140 07.00 WQBA,Miami, FL ID on hour
222 04/02 DER

1360 07.03 WMOB, Mobile,AL Really good signal, ID on the hour
322 04/02 DER

1380 07.19 WABH,Bath, NY, ID during Back to back Country Music
111 04/02 DER

1500 07.00 WFED, Washington, NY ID on hour
222 04/02 DER

1510 07.33 WLAC,Nashville,TN ID before sports news
222 04/02 DER

1530 07.00 WCKY, Cininatti,OH. ID after the "Overcomer"
show 212 04/02 DER

1540 07.00 KXEL, Waterloo, IA .ID on hour
211 04/02 DER

1540 07.00 CHIN,Toronto,ON, Mixing with KXEL,reference to Toronti
news 111 04/02 DER

1560 07.00 WQEW,Radio Disney, New York, ID on hour
222 04/02 DER

1640 07.00 WTNI, Biloxi, MS. Super Bowl Highlights
111 04/02 DER

1690 07.00 WPTX, Lexington Park, MD ID was "the News station
WPTX" 212 04/02 DER

Thanks again Damien.

I just checked 1680 after learning about Stuart's KRJO reception. It was here too. I only caught part of the ID due to WOKB being dominant, but the partial ID I heard matched Stuart's recording and so I was able to understand more of what I was hearing. 100% KRJO:

1680 0700 USA KRJO Monroe (LA) "You're listening to Bloomberg Radio on KRJO Monroe, newsradio 16-80 ... absolutely no alternative ... " Tnx Stuart H for help 7324 km

1310 0700 CAN CIWW 1310 News, Ottawa (ON) Thirteen Ten News IDs 5332 km

A better night again! BUT it wasn't a night for IDs. I am pretty sure CHSM was there on 1250 with semi-classical romantic styled music at 0700. There was probably an ID on the hour but the signal had faded.

Other bits and pieces of note:

1210 - Audio! Such a difficult channel
1290 - K call at 0700?
1340 - Weak music at 0700!
1360 - WMOB presumed with Gospel, best signal yet
1430 - Presume CHKT with ethnic programming. Didn't sound Chinese though
1450 - Vague call, sounded like WLKW but unsure

Recordings:

1310 CIWW
https://www.box.com/s/lmqe7i7elg95fwh0irg1

1360 WMOB
https://www.box.com/s/1g6t2a9jgsi0g2yzvcde

1580 CKDO

Hi John,
Can't say I had much luck last night,certainly the signals where there, but to much QRM and splash on some freqs.
However not all has been lost, managed to get a few ID's in and I can confirm your CHSM On 1250Khz

CHSM 1250Khz
<https://dl.dropbox.com/u/91837451/CHSM%201250KHZ%2007.00UTC%206TH%20FEB\%202013.mp3>

WURN 1020Khz
<https://dl.dropbox.com/u/91837451/1020Khz%20WURN%20KENDELL%2007.00%208T\HFEB%202013.mp3>

WJNO 1290Khz
<https://dl.dropbox.com/u/91837451/1290khz%20WJNO%20WEST%20PALM%20BEACH%\2007.00UTC%208TH%20FEB%202013.mp3>

WWNN 1470Khz
<https://dl.dropbox.com/u/91837451/1470KHZ%20WWNN%2CFL%2007.00UTC%208TH%\20FEB%202013.mp3>

I also managed 1360Khz at 06.06UTC, WDRC,Hartford, plenty of signals, let hope things keep carrying on, I still have yet to catch a West Coast Station, and although I have had some great catches this year, that would make a great ending for my 1st proper MW TA season.

Thanks Damien.

Keep trying for west coast. When the conditions allow you WILL get it. When I remember back in the 80s when I used to dream of getting west coast I never though I would hear it so well one day that it could be stronger than some east coast DX and even be strong enough to push the Europeans aside. It's all about timing.

February is not regarded as a great month for TA DX but there could still be a few surprises. March might be better but the key months for TA DX are often September/October and December/January. It's a waiting game though.

Cheers

John

3637. Medium Wave Noise

Yahoo group: skywavesmw
Date: 2013-02-13 10:57:44 UTC
From: John Faulkner, Skegness
Topic: 3637 Message: 3637
Attachments: 1 described; binary payloads are missing from this source WARC

Well, it was time to catch up with the last couple of days worth of overnight medium wave recordings, but when I loaded the files I discovered the MW band had been wiped out by noise.

I have been around the bungalow with my DE1003 in an attempt to find the noise source but nothing seems to show anywhere, which makes me wonder if there is something else amiss. The flag has been working perfectly lately since I re-wired the two connection boxes and this still seems to be working correctly when checking the signals which are getting over the noise. I also removed both inline chokes to minimise the possibility of a duff connection but the noise is still there.

I have attached a screen grab which shows regular spikes with sidebands in the hope that somebody might recognise what this is. My noise floor is generally around -130dB, but as you will see from the grab it is now around 110dB since these spikes have been present.

The noise level starts right down at 50Hz and continues up towards the 80m ham band. The spikes are more noticeable across the lower half of MW but pulsate up and down a couple of times a second around the bottom of MW.

Thanks

John

John:

It looks similar to the noise I got when I lived near an electric sub-station. It was much worse when it rained or for an hour or so after a squirrel discovered electricity. I was only 300 Meters or so away from it so that made it the second worst location for MWDX and low band SWL. Since you use 50Hz on that side of the Pond I'd strongly suspect something running on the grid and possibly at a good distance since the power lines make great antennas for broadband noise.

Not sure about the pulsing, could be some commercial machinery that's arcing or even a high efficiency furnace ignitor.

Just my $0.02

I think I agree with John of something coming over the power lines. The way it looks in your screen shot kind of reminds me of noise from a power tool like a circular saw or something with an high amperage electric motor. Spark gap transmitter anyone?

Could your well pump (if you have one) or one of your neighbors well pumps be stuck on or going bad?

There was someone a couple of years ago on one of the many radio groups I am on that had a neighbor put in a well near to where his antenna was and had horrible noise throughout the BCB when the pump was on.

Well pumps are also horrible noise makers when the get installed near a seismometer you are trying to get data to do your thesis with.

Thanks Tim/John.

The field on the other side of our garden fence has three-phase power lines running through. At their closest they are about 50 metres away from my flag antenna, which actually points away from them. The power lines run closer to this side of the field after 100m or so. I used to run a beverage directly underneath them when I moved here a couple of years ago and never had any noise from them.

If the noise is coming from these power lines (unable to check easily at the moment due to sub-zero temperatures, darkness and a snow blizzard) then something bad is being fed into them and radiated along the length. It's certainly killed off any chance of MW DX from here, even with the chokes inline.

At least it seems the interference is intermittent as I have checked a few more of my overnight files and a few top-of-the-hours are OK. As I type however, the spikes have disappeared and I just have wall-to-wall rasping buzz. Whatever it is is quite variable and, now I think about it, I did have some loud clicks across MW about a week ago which could have been the beginning of whatever it is which is causing the interference.

Since I was unable to find anything by running the DE1103 around the house I have to look further afield and will check those power lines tomorrow.

Thanks

John

12-02-13:
1670 0700 CAN CJEU Gatineau QC. Radio Enfant ID after jungle drums (or similar) 5309 km

13-02-13:
1040 0201 CAN CJMS Saint-Constant QC. Presumed. French anns at 0201 and country music either side. Difficult copy 5191 km

Managed to hear a little - two Skegness firsts for me amid the noise blasts.

Good DX!

Nice Catches John,
Haven't had much luck at this end, although I have got 2 nights to listen to, I don't have heating the garage,and it's a bit cold.

1670 CJEU has been a regular here at my QTH, they don't aways ID,and have school choir's, with children presenting on there.

I hope you have sorted your QRM problem out,my neighbour uses PLT, thankfully we came to a agreement, he knocks them off at night (Thank God)

You are lucky with your neighbour then. Ours are highly unpredictable and I just daren't suggest they switch their off at night. I know the answer I would get. They leave a lot of electrical equipment on all night for their disabled son. I could be wrong but I don't think the noise source is coming from my neighbours.

The noise is less severe at the moment and the top half of MW has improved. I have a reasonable signal from Boston 1510 right now and there is something on 1540. There's a lot of 'rubbish' in the X band though. It doesn't look good with a background noise of -120dB to -110dB. I know these figures don't seem too high but they play havoc with a weak transatlantic signal.

Yes, it can be a lottery with neighbours,I'm lucky that my neighbour lives on his own, and is a nice neighbour.
In all honesty,he didn't know about the interference they caused, and purchased the PLT from maplins.
A really good suggestion to neighbours,and if you can get them to agreed, is to run the PLT's on timers so they switch off at night, the neighbour save electric, and you get your DX back in the night.

Slightly off topic, I have heard plans that my local council in Worcestershire are planning to turn the street lights off at night to save money, this could be great DX news if this happens,of course, I don't know much of a difference it would make?

The street light switch-off sounds like a good for DXing.

Well I am pleased to report that the noise last night was much reduced
and tonight it's back to a very quiet band. I have only -125dB noise in
the X band and -130dB across the bottom half half of MW. Quiet enough to
not need the noise reduction facility. Pity conditions have blown out,
but even so I have quite a few good TA carriers across the band so
hopefully something different will come through tonight.

Good DX!

John

3646. Overnight Conditions

Yahoo group: skywavesmw
Date: 2013-02-15 09:25:26 UTC
From: John Faulkner, Skegness
Topic: 776 Message: 3646

The numbers have been quite bumpy over the last couple of days so I didn't expect to hear much overnight. I just had a quick check as I won't have time to listen until later today and the 0700 slot seems quite lively. There are a lot of TA signals at this time and it looks like a Latin or possibly even Mexican morning. Hopefully there will be a few new ones in there.

Good DX!

John

Just caught up tonight, not much new stuff at my QTH. The usuals on the X band from Canada. Got IDs from 1690 CHTO,last night on the 12th 1400 CBG Gander, and the 13th WCNZ Marco Island.

Well, these were the ones I noted from the morning of the 15th at 0700.
Apart from these it was a fairly uninteresting night:

_*0700*_
1040 Spanish. Top of hour announcements and possible ID up to 07:00:20
Again possible ID at 07:00:46
1070 Spanish 0700
1100 Spanish x UNID 0700
1140 Two stations. One lively Latin
1250 Spanish. ID or anns 06:59:00
1290 Spanish music & second (Spanish?) station
1310 Fox Radio News mixing soft Latin music
1340 Soft orchestral music over the hour
1420 Latin
1470 Pile-up. Latin and US
1500 Second station with WFED
1510 Second station with WUFC, poss WLAC
1520 Second station (Latin) with WWKB
1550 Latin? Lots of splatter
1580 Latin
1590 Latin with ID. "Buena" and "Grande" mentioned.

From other reports I have read it was a Colombian morning. I still
haven't identified anything from the above but will hopefully go through
the recordings again shortly.

Ovnight conditions for the 16th - again, just a quick check at the
moment, but the 0700 slot was VERY lively! There is a terrific signal
from WQBA 1140 and WJNO 1290 was coming in well. More later.

Cheers

John

1320 0701 USA WLQY Hollywood FL. This is WLQY Hollywood, Miami, Fort Lauderdale ID in English and then ID in ethnic language (Creole?) 7110 km

This has, so far, been the only new station I have found over the last couple of days, although there were plenty of other unidentified stations around.

There has also been a station I have heard on 1100 and 1590 which has a very distinctive jingle on the hour and I am wondering if it is something to do with the Colombian RCN network. Here are recordings of both. The 1590 recording may have an ID.

1100: https://www.box.com/s/9jd0yw8h4380dgpapego
1590: https://www.box.com/s/6zij6xaryc0wbmcqkmqn

1320 WLQY Hollywood FL: https://www.box.com/s/7r8od78h2sqjxzhbb9tt

The only other thing of note this morning was a very weak W call, noted at exactly 06:57:55 on 1230. Maybe somebody has a clear window on 1230 at this time and can throw some light on it. Recording available.

For those recording overnight: If you haven't heard 1140 WQBA and 1290 WJNO yet, 0700 this morning provided good signals here.

Good DX!

1430 0700 USA WOIR Homestead FL. Multi-call ID and clear mention of Homestead, Miami at 0700:50.
Spanish language at this time 7175 km

Spotted another one!

https://www.box.com/s/udmohu2xextrmzengry2

Listed 500 watts at night, though I wouldn't be surprised if this was on 5kW day power. Mind you, it was a very good morning for Florida stations, as well as Colombia!

Nicelogs again John,
I only managed one of your Tips WLQY on 1320Khz, and to be honest it was not as clear as your recording.
1590Khz is a No no Freq here due to Woofererton, and no luck on 1100Khz

Managed to get ID on following
1440 Khz WRED "The Big Jam" at 02.57 this is always a hard one to ID due to the amount of sport the channel

Lastly, here is a a bit of a odd one on 1620Khz I heard a ID for the BBC World Service at 04.00 UTC underneath Cuba,any idea's ?

From: Mauno Ritola
Topic: 3604 Message: 3655

Hi John,
did you get any reply yet?

693: if the English speaker is on 690 kHz, you should hear a terrible
het whistle from any station on 693 kHz, so I suppose also the other
station must be on 690 kHz. Is the time really 0727 UTC? Then it still 2
hours before greyline reaches Japan.

702: sounds Japanese to me. But again the time is 0731 UTC?

73, Mauno

You are the first to answer this thread. Thank you!

I went back and listened to the original recording thinking that I removed any het in my clean up and heard no het. I didn't think I would hear intermod from so far away? I was relatively far away to get any intermod and I have not heard it with this radio/antenna combination in much more RF saturated locations. Both of the Japanese language Hawaiian station are over 325 km away from the QTH I was at.

The 702 clip has a pretty stong het on the original which I removed in the version you heard. However, the closest local station to 702 in Hawaii is the same strong EE station on 690. The 690 station is the only station on that frequency in Hawaii and the only local station close to either 693 or 702.

There is nothing on 680 in Hawaii and the next local station after 690 is on 720. So there is a good gap there after 690.

The times I listened are correct as it was late evening (10:00 PM-around 01:00 am) in Hawaii when I listened.

Thanks Jurgen.

At precisely what time does your recording begin? Your AM List log says 0704 but I don't hear the Radio Rebelde jingle at that time. I hear R Rebelde on the hour mixing with WDHP (BBC World Service relay) and then there is an oriental station (still WDHP?) with a long pip (like the Japanese time pip) and far eastern Asian language.

This is my recording, beginning at exactly 06:59:45:
https://www.box.com/s/2gf9y0ns7luabz80lid8

John,
I think it was 0600z, but I heard it also 30min later
I already deleted the file.
Didn't hear an oriental station, actually never heard any on 1620

> This is my recording, beginning at exactly 06:59:45:

Topic: 3657 Message: 3660

I have too much noise here that to turn off the noise reduction. Trust me, if I did you wouldn't hear so much detail. My listening environment is not ideal and I am only running a flag right next to the bungalow at the moment. Our garden is only about 10 metres square so space is limited. As soon as I find some suitable wire I plan to run a BOG under the hedgerow along the field to the rear of the property.

Here is my 0600 recording of 1620.
https://www.box.com/s/ia073aolhatj9rq2x92l For you I have recorded the top of the hour three times, with FULL noise reduction, then WITHOUT noise reduction and finally with minimal noise reduction. Maybe now you will understand why I use so much noise reduction. Tell me what you think to the clarity/lack of. I don't know if this is the Radio Bayamo ID in here. It sounds like it could be but I am not 100% convinced.

I also heard Latin rhythms on 1520 and 1540 around 06:30 - 07:15. 1540 is slightly high in frequency and I wondered if this was Turbomix. The Latin on 1520 does not have any IDs or jingles between songs. 1500 also has something slightly low in frequency. Peru again perhaps but not strong enough to ID easily.

John

If possible don't put t on ground, lift it a bit, the increase in level is dramatic. I once tried a BOG, but levels were so much down, so I lifted it back up to 1m. Simulations tell the same.

It sounds that Bayamo relayed Rebelde at that time.
The part with NR=off is the best
The noise is not that bothering, my brain can adjust to it, but it can't adjust to a spectrum warbling (causede by NR)
NR sounds nice at first glance, but is pretty useless when you want to hear details, the brain needs *all* details
Better adjust AGC_Threshold to get a better noise behaviour. Personally I never found a good setting, and I use SpecLab as the demod that does not have a AGC, so the "dynamic" range is larger but it sounds better (uncompressed), the noise isnt brought to the forefront that much

If you hear a 500Hz het than it's Turbomix, it seems they use big compression, because everytime the carrier gets up, the audio gets audible

1520 is WVOZ
Check the carrier, then you'll see it right away

> Latin on 1520 does not have any IDs or jingles between songs. 1500 also

Thanks Jurgen.

Under the hedgerow is the only option for a wire as the field is often used by walkers (and sheep at certain times in winter). The last raised beverage I ran out there was destroyed after only two days. The wire was scattered across the field in pieces. It must remain hidden if I am to try another one.

As for the noise reduction, I am surprised you can hear more with the noise reduction off. It's the opposite for me. I realise that all forms of noise reduction will spoil the wanted audio to a degree, but it's often the only way I can extract audio out of the mush. Other people often comment on my my use of noise reduction and I don't have a problem with that. We DX in what ever way suits us.

I will give those Puerto Rican/Peruvian loggings a miss this time. 1520 is very likely WVOZ, based on past experience and I have little doubt on the two Peruvians, 1500 and 1540, as the offsets would confirm this, but I would be happier to report hearing an actual ID for a MW logging. I think I heard a Turbo Mix ID at some other time, I think it was around 06:32, but it was too weak to be sure. I need a westerly flag :O)

3663. Skywaves Skype Chat

Yahoo group: skywavesmw
Date: 2013-02-22 13:13:43 UTC
From: John Faulkner, Skegness
Topic: 3663 Message: 3663

Following a few requests to re-open an instant chat group I have set up "*Skywaves Chat*" on Skype. This will enable free instant messaging - excellent for DX alerts, along with the option to share audio and video and stream it too if wanted.

Hopefully somebody will be able to join me there in the next hour or so while I test it out.

It will be very informal and subjects covered in there will simply relate to whatever conditions are relevant at the time. MW in winter, FM band 2 in summer/during tropo, etc.

Looking forward to seeing you in there.

Remember, you might not always get an instant response if other users are not present or not sat by their computers. Obvious to some I know but perhaps not apparent to new users.

Thanks

John

Hi Mauno.

I am discovering this from other users. It's all changed since I last set up a chat group on there.

I will probably have to accept people individually for now as I don't believe the group is public (still going through the settings) so you will need to come through me - my username is John Faulkner but you might also find me under "skywavesdx". I can then add you to the group.

Same for everybody I guess so patience if I am not by the keyboard.

Thanks

John

I don't pay attention to the noise and concentrate on what's below. Garbling that up makes it extremely hard, and you'll hear phantom phrases. Maybe your suspected exotic language on 1620 is a result of that?
In Realdx you see it often that people ask to turn NR off.

Well Jurgen, I must be doing it all completely wrong and my imagination has been running wild.

Thanks for the explanation.

Seriously Jurgen, I am trying to hide the wire, hence burying it under the growth around the hedge/trees. It's not ideal but it's better that way. The housing association are keeping their eye on me as it is. I am not lucky enough to live in a remote location in a large detached house with huge gardens like you. I live in rented accommodation and the immediate neighbours are strange (I'm sure they all think I am with my FM5 and large rotator). Amateur radio aerials of ALL kinds are banned on ALL properties owned by this housing association.

I still hear more on most frequencies when I use the noise reduction. I started to post something earlier today about this issue but deleted the post as I didn't want to dwell on the matter, but since you mention it, I was lucky to hear WMOB on 1360 again around 0700 this morning and, for a change, that part of the band was nice and quiet so I was able to turn off the NR and actually hear more. It depends on the amount of noise on each frequency. In an ideal situation I would prefer not to use any NR, but sadly it is usually necessary and actually helps, even if the resulting sound is digitally garbled.

As for my phantom signals, well, you leave me speechless. I'll get my hearing checked. I did think it rather odd when I heard the Japanese time signal playing from the toaster earlier today. Hey ho!

Good DX your highness!

John

3669. 1320 Radio Apolo

Yahoo group: skywavesmw
Date: 2013-02-23 09:41:04 UTC
From: John Faulkner, Skegness
Topic: 3669 Message: 3669

Not an exceptional catch but this one has been absent this season until this morning. Here is a recording of Radio Apolo from Turmero, Venezuela on 1320 at 0601.

https://www.box.com/s/in5zev967znftn53tdhf

At first I thought this was an ethnic station from North America until I realised the song at the end was actually a jingle, then everything else became clear. The OM also says "Apolo" close to the beginning of his speech.

I have repeated this recording. Firstly without noise reduction and then with. The ID at the end is much clearer to my ears with the noise reduction. Not trying to prove anything here but I would be interested to hear from anybody whether they think the speech is rendered clearer with the noise reduction, or is better without it. I'm close to 50/50 on this but I think I still prefer it with the noise reduction.

Cheers

John

Thanks to Tim who just reminded me of this ...

Not so long ago, BBC Radio Lincolnshire (and another station, forget who) played a looped announcement on 1368 kHz, advising listeners to re-tune to FM frequencies, as part of an experiment to see if people were actually listening to their MW service. Were any results actually published about this?
/
//'Scuse me posting this to both MW and FM groups.///

3675. WEEF 1430 ??

From: John Faulkner, Skegness
Topic: 3675 Message: 3675

Morning all. I have a clear ID of WEEF on 1430 at exactly 05:59:50 this morning. Don't know if anybody else heard this. Can't help but think it's just one of those things WENE drops in when referring to other stations on the sports net, but WEEF is listed with "ethnic" format. Perhaps somebody also hears this.

John

1370 0500 USA WDEA Ellsworth ME. Call letters heard in small gap of
local BBC Lincolnshire
splatter 4929 km

1690 0500 USA WPTX Lexington Park MD. Call letters, mentioning
Lexington Park. Over Enlgish
UNID. Weak CBS News jingle seconds later but not
sure who that belonged to 5887 km

Just a couple of news ones to my log this season.

Two unusual things of note this morning: I had a clear ID of WEEF on
1430 at exactly 05:59:53 this morning. Don't know if anybody else heard
this. Can't help but think it's just one of those calls WENE sometimes
drops in when referring to other stations on the same sports net, but
there is a WEEF listed on 1430 with an "ethnic" format.

More interestingly to me was hearing the ABC News jingle on 1460 at
0500. It's very unusual to hear anything other than CJOY on 1460 and
even that's not exactly common as it's usually a well-splattered
frequency. Who is the likely supect to carry ABC News here? Looking at
the regulars: WDDY is Disney; WHIC is EWTN and KXNO is ESPN so probably
nonoe of these. A mystery!

Good DX!

That should be "new", not "news".

No luck with WEEF on 1430Khz,I can here a music station, and apart from WENE is too loud at my QTH.

I also managed WPTX on 1690, and had a ID from CKNB on 950 Khz, and Cuba on 1180Khz, with the usual on the hour themes.
It wasn't as good as the 23rd,but hey ho! Looks like the East coast TX's are starting to become louder again.

Last night was pretty average,nothing new really at my QTH. Does anyone have a idea on the TX that seems to be playing back to back music on 1430Khz,sounds possibly latin america at time, and was mixing with WENE, just couldn't get a ID.

Maybe WNEL "Radio Tiempo" from Caguas, Puerto Rico?

I hear this too most mornings lately. Never an ID though.

Won't have time to check this morning's overnight recordings until tomorrow.

Thanks John,
Like you said,they are a bugger to ID, and there is certainly nothing on the hour, still who knows, perhaps we can get a ID between us sometime.

1290 0500 USA WNBF Binghamton NY. Top of the hour ID - "News Radio
12-90 WNBF Binghamton, a ... statio"n 5569 km
1630 0600 USA WRDW Augusta GA. WRDW call letters hears at the top of
the hour. V weak 6608 km

Two firsts for me at this QTH this morning, although I have never heard
WNBF before anywhere.

Perhaps somebody might recognise the call letters before the WNBF ID on
my recording: https://www.box.com/s/5e25z5pumoifck2kls1q

I think I hear CJOY in the mess on 1460 this morning around 0400 - 0500.
Possible ID in a long promo just before 0400.

Apart from this, conditions are still quite disappointing.

Good DX!

Sorry John, No luck on WNBF 1290Khz, I can get a carrier and see the carrier, but I'm swamped with co channel interference I'm afraid, 1450Khz is also a no go channel hear in the Midlands.

Managed to get WRDW 1630Khz, a amazing signal around 04.00 Utc CJEU 1670khz, 1700Khz WJCC,1660Khz WCNZ and 1690Khz CJLO.

Also 1330khz WRCA at 04.01UTC, and 1190Khz WLIB at 05.30 UTC

Nearly had a ID on 1280Khz at 04.00UTC

Not a outstanding night, the norm on the x band for myself, WRCA & WLIB haven't been heard for a few weeks.

1430Khz was back to normal, had a good signal from WENE, no sign of the background latin america station tonight.

Lets hope tonight will be good

1280 is usually occupied by WNAM Neenah Menasha WI these days (if conditions are OK), I don't know what's happened to the old regular WFAU on there lately. WNAM have ABC News and I've been hearing a weak ABC News jingle on 1280 for the last two or three nights. Also funny because WNAM used to be considered an exotic catch.

I still haven't worked out what my other North American ID is just before WNBF pops up. There was a lot happening on 1290 at that 0500.

MW not in bad shape again considering the hour.

Cheers for now Damien.

Thanks for this Jurgen.

Signals are starting to fade at 0700 but 0600 is better. I have a second station on 1600 with an OM presenter but I haven't found an ID yet. What was the exact time of your recording? I know your recording states 0700, but your loggings are always listed at 4 or 34 minutes past the hour on MWList. Can you be more specific? Was the ID exactly 0700?

Thanks

John

There are problems with StationList.exe, for unknown reasons it suddenly
switches to UTC-mode, and the logs then appear as one hour later in MWLIST
I have to fix that problem
Timemarks carry the end-of-file mark, that's why you see :04

Bayamo ID is at 0500z
that's local midnight in Cuba, when they all play the N.Anthem

The others were 0600z

1510-Boston still audible as I type (0800z)

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el

Thanks.

:-(It seems I have only WUNR ID at 0600 and 0700. Conditions were generally better at 0400 here with a nice ID from WUNR.

Thanks. Log to follow.

John

I really can't be bothered with the offsets at the moment. I need to re-calibrate and I can't remember the procedure. Too much hassle, sorry.

https://www.box.com/s/9k98c3vabdzp5cgk2fpo

1290 WRNI Providence RI 0404 27-02-13
https://www.box.com/s/w999jfwqy67iv4cmlwn1

1310 WLOB was coming in well this morning. I think it was 0500 - very weak on the hour but peaked fair during their news bulletin.

Jurgen - I am running a screen grab of 1600 and will post soon, but there is no calibration. You will see which carrier is WUNR and should be able to compare with that. I don't think it's possible to calibrate Perseus on a recording, is it?

Good DX!

John Faulkner, Skegness, Lincolnshire (JO03dd) 1m ASL

Screen grab of 1600 around 0600 this morning Jurgen. Hopefully
meaningful. I probably have the settings wrong somewhere though ;-)

John

Nice logs John,
Here are mine from last night, 1430Khz is still bugging me, still no ID better peaks, and a few ID's fromWENE, and at one point I had 3 signals mixing. I could have log a few more last night, but as they say tomorrow is another day!

1290 04.04 WRNI, Providence,RI, Weak LSB, ID help via Skywaves
211 27/02

1430 04.00 WENE, Endicott,NY, ID on hour
212 27/02

1600 04.00 WUNR,Brookline MA, ID on the hour LSB
211 27/02

1650 04.00 CJRS, Montreal,QC ID as "Radio Shalom" strong
signal 333 27/02

1670 04.00 CJEU,Gatineau,QC Usual French chat with children
222 27/02

1690 04.01 CHTO, Toronto,ON, ID top of the hour
222 27/02

1700 04.00 WJCC, Miami Springs FL, Spanish songs, mention of Palm
Springs 222 27/02

And if anyone is interested,you can see a full list of my Feb Logs until the 26th on my recent Blog..Just hit the link below

John,
you zoomed in to much, .005 sits beyond your range
Also, better set it to spectrum, a waterfall is not that helpful (for me) to
judge the levels

Here you see it nicely:
http://dx.3sdesign.de/unid/Spectr-130226-0601-1600-WAOS.jpg

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 300m Bev 260°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus

Thank you Jurgen. Appreciated.

I don't have that file anymore so I will look again tomorrow. I won't log it of course unless I hear an ID, but I would be interested to see if the carrier can be received here.

Not much time to listen to this morning's overnight session. Hopefully tomorrow.

Good DX!

John

3697. 28th Feb 2013 Logs

Yahoo group: skywavesmw
Date: 2013-02-28 23:33:55 UTC
From: damienread@ymail.com
Topic: 3697 Message: 3697

Hi All,
Was not to bad last night, some really strong Candian signals in the X band again.

The logs (Not including the usuals)
1310 05.13 WLOB.Portland ME,News then ID "1310 All News Radio"then sports 211
1660 05.05 WCNZ, Marco Island FL, ID after Van Morrison Song 333
1680 05.03 WTTM,Lindenwold,NJ ID just after the hour 212 (a 1st timer)
1680 05.04 WOKB, Winter Garden,FL ID "your Urban Empowerment station" 212
1690 05.05 WMLB,Avondale Estate,GA. ID after news "The Voice Of Arts" 111

Finally had some luck on 1430 KHz, and what I hope is a ID ?? As it's in spanish,I'm not sure if it's a ID or not, hope you chaps can help out ?

1430Khz Unid

First time something else than VOCM / WEZE
590 CUB Radio Musical Nacional, La Julia (Batabanó)
Heard N.Anthem before Rebelde started its NA
But at the end too much noise for an ID, so this is tent.

1640 DOM Radio Juventus Don Bosco, Santo Domingo
weak ID thanks to Frederik it got solved.

3699. CHHA Radio Voces Latinas

Yahoo group: skywavesmw
Date: 2013-03-07 18:34:29 UTC
From: scottishdxer_markborthwick
Topic: 3699 Message: 3699

Hi all.. my perseus recordings on the 6th March produced a personal first for myself , CHHA Radio Voces Latinas 1610khz was received. Normally this frequency is dominated by the Caribbean Beacon, so it was refreshing to finally receive another station on this frequency.Conditions on the 6th favoured Canada with many of the usual stations producing some great signals.
For me at the moment the upper portion of the MW band say from 1100khz and up is were the signals seem to be the best the lower portion seems poor at the moment especially around dawn.
Here is a link to my YT video of my CHHA reception if anyone is interested, CHHA 1610khz Video <http://youtu.be/q8bcVgv3jKA>
Perseus SDR and Super KAZ antenna @320deg

Hello Mark.

That's a superb recording of CHHA. Your noise floor is exceptionally quiet too!

I have been out of action on MW for a few days, [art;y due to a broken flag antenna. I will attempt to record MW again tonight.

Great website!

John

Hi John, thanks ! It was great to hear a new station on 1610khz and It helped with the propagation favouring the Canadian stations.
I hope your flag antenna is back up and running ready for DXing.
I would like to congratulate you also on your great website\blog lots of good reading....and also thanks to your article on the Climax DTV300 dongle, I am now the owner of one :) and am over the moon with it receiving NOAA Apt satellites with better results than my Icom R20 that coast allot more than £15 :o

Cheers Mark

Thanks Mark.

I must link to your blog. Perhaps you could reciprocate? Actually, I have got a bit behind with this and need to add a few bits. Glad the dongle info was useful.

As for MW, the flag was simple to fix this time and I can report reasonable east coast North American reception already (23:00)!

I had a shock today when I read the latest predictions for the current sunspot cycle - later this year! I thought we had already passed the peak. This is bad news for MW DX.

Good DX!

John

3703. WKCW 1420khz Virginia

Yahoo group: skywavesmw
Date: 2013-03-08 21:20:48 UTC
From: scottishdxer_markborthwick
Topic: 3703 Message: 3703

Hi all, I am delighted to have managed to winkle out a PF this morning from WKCW 1420khz at 06:30utc. If their on-line station info is correct then their night time TX power is only 60 watts !! For me in Southern Scotland the best signals are currently in the 06:30utc recordings and again today some really good signals especially on the the X band.
Youtube video of my WKCW reception WKCW 1420 khz
<http://youtu.be/ToIe5c_TGpw>
8th March 2013 @ 06:30utcPerseus SDR and Super KAZ antenna @ 320deg

I'm shocked!

https://www.box.com/s/sbzngmvhhbkihkk9957s

I checked MW on the hour at 0600 and 0700 and heard nothing of interest, although conditions were clearly better than in recent days. Then I thought I would check my 0630 file, just in case WKCW might be there, and BINGO! They must surely be using their daytime power to be heard with this sort of signal, especially down here, but this is a great example of how 'rare' DX get logged and is then never heard of again. Assuming they have a tx power-down issue I would keep a check out for this again tonight. Once this one's gone it may be a long time before it is heard again on this side of the Atlantic, if it is ever heard here again!

Cheers for this Mark.

John

I just checked the All Time MW Log, sadly this isn't a UK First. It has been logged a number of times, firstly in the North of Scotland in Clashmore in 2011, then there were a few loggings in 2012 it seems.

Oh well, a great catch nonetheless.

Great to see the signal made it down to south uk, your flag antenna must be back working again, thanks for the list John ! It is a nice thought that they are using only 60w but I agree the signal is awfully strong I hope the station can confirm with an email

Cheers mark

I had it a year ago 23-Feb-12, when it also ran daypower
Forget the 60W, and don't expect they will tell you the truth :-)

I also saw a strong carrier, with a bit audio during the pips of strong
14220-DLF. But it seems to be a different signal as the carrier had a different
offset. My ant doesn't favour east-coast anyways.

3708. 1450 WPGG Atlantic City - Now

Yahoo group: skywavesmw
Date: 2013-03-09 00:25:35 UTC
From: John Faulkner, Skegness
Topic: 3708 Message: 3708

Conditions not too bad as I type. Listening to an English OM talk show on 1450, suddenly overtaken by a semi-classical female vocalist. The latter seems to be WPGG Atlantic City NJ as their web stream is carrying the same. I suspect the talk station is VSB Hamilton, Bermuda. Just hoping it fades up again so I can check for a web parallel.

Good DX!

John

1450 0020 USA WPGG Atlantic City NJ. Semi-classical female vocalist, as web 5670 km
1680 0500 USA WTTM Lindenwold NJ. Weak reference to Lindenwold-Philadelphia 5667 km

Peaks and troughs overnight. WTTM is a first for me here. WKCW Warrenton 1420 was audible again with an ID at 0600.

Good DX!

Nice Logs John,
Been away from the radio for a few days, although I managed to get WKCW VA on 1420Khz at 06.00UTC last night, A 1st for myself.

No luck on 1450Khz WPGG.

I have a feeling things are going to improve again,let hope!

3711. Conditions Improving

Yahoo group: skywavesmw
Date: 2013-03-11 10:20:16 UTC
From: John Faulkner, Skegness
Topic: 3711 Message: 3711

You were right about conditions improving Damien. 0600 and 0630 were quite good today. I didn't hear anything new but there were some fair signals from:

930 CFBC St John NB
1100 WTAM Cleveland OH
1120 KMOX St Louis MO
1420 WCKW Warrenton VA
1430 CKHT Toronto ON (Presumed - Oriental)
1510 WLAC Nashville TN
1540 KXEL Waterloo IA
1580 CKDO Oshawa ON
1590 WAKR Akron OH
1600 WUNR Brookline MA

... all at 06:00

It made a change to hear WAKR dominating 1590 today instead of the usual WARV.

Good DX!

John

Hi John

Conditions still holding here in Southern Scotland with some really good signals from the east coast WQEW and WUNR were among the really strong ones. WKCW 1420 was received again at just after 06:00

No sign of WLAC with me John as WUFC was booming, also no sign of KXEL instead I think CHIN no ID just CRI reference also good signal.

And on 1590 I was getting WARV and others mixing 1590 is one of those frequencies for me that can be a mess of stations the only station I think I have received on this freq with a solid signal was la mexicana.

Cheers and Good DX

1170 0600 USA WWVA Wheeling WV. Heard WWVA Wheeling clearly in pile-up 6021 km
1180 0600 USA WHAM Rochester NY. ID - This is WHAM Rochester News 5605 km
1200 0600 USA WXKS Newton MA. References to Central University and Bloomberg Twelve Hundred. WXKS ID and FM frequency 5251 km

Conditions still improving a little more. WHAM and WXKS are first here.

Unidentified:

Sports was heard on 1350, maybe WOYK which I haven't heard for a good few years. Perhaps somebody else heard this - the time was 06:00.

I also heard a call of WGCQ/P, or very similar, a few seconds before 03:00 on 1430. It was uncomfortably weak but did not sound like the usual WENE. Perhaps somebody else was monitoring at this time.

Good DX!

Hi John,
Finally Catching up, manage to get all your ID's for a change! Allof them 1st for myself. No luck with 1350Khz, However I checked out 1430Khz at around 03.00 UTC and although it's weak, and I can't get a ID, it's is certianly latin American, it dosen't last for long,WENE fades back in.

Keep pluging away mate!

Thanks Damien.

Glad you caught the stations I heard.

I'm not sure this is South American in your recording. The language and the way the vocals are processed sound Indian to me, or something from that area, which would point to CHKT Toronto. There is a La Voz De ... at 50 seconds. Then a possible CHKT ID at 52 seconds, in whatever the language is.

I checked my 0300 recording at that time and didn't hear the Indian sounding station. There was something Latin sounding around 0259:30 but it wasn't clear. There's still that WECQ, or similar, ID a few seconds before the hour. That's a mystery and possibly even an FM call WENE could have mentioned. There's nothing resembling those call letters on 1430 according to Topaz. Nothing is clear sadly.

Conditions sound reasonable again so far tonight.

Good DX!

3718. 1400 UNID

Yahoo group: skywavesmw
Date: 2013-03-14 09:55:06 UTC
From: John Faulkner, Skegness
Topic: 3718 Message: 3718

If anybody has the 0500 top of the hour recorded from this morning I hear what appears to be a legal ID of a station mentioning 1540 and 1130. Presume other frequencies in a network. Maybe something there mixing with CBG. Hopefully somebody can make more out than I could.

Other than that, conditions not so good overnight.

John

Here in eastern Finland only CBG audible, but about 20 carriers in addition. Some stations still audible at 0600, which is exceptionally late for this time of year.

Thanks Mauno.

I did a recording, /without/, then /with/ noise reduction.

https://www.box.com/s/774yl592xvjywu4colaj

Is that AP Network News in there? Probably not enough to go on in the vocals but shouting OM presenter there, not sure if advert or sports.

Cheers

John

Sorry - looks like the 1130, etc. is a CBC reference, "in Newfoundland", etc so CBG dominating.

Still unsure about the AP News. I'll try to check more of this later as it looks like something else is definitely in there which isn't CBG or WOND.

Cheers

Do not know if this has previously been reported but thought I would send it in
Edward G1MXP

Australian MW AM broadcaster heard in Scandinavia
ABC Adelaide reports that their medium wave 1161 kHz AM transmitter was heard by a listener in Finland.
Kimmo Vuorela received the Australian AM broadcaster using a Perseus type communications receiver and an array of 3000 foot long antennas, one of which was pointing toward the station.

ABC news feed reported
Tuning in to ABC South East - from Scandanavia
13/03/2013 , 10:36 AM by stuart stansfield
Believe it or not, but the reach of ABC South East extends as far as Finland.
A radio enthusiast whose hobby is listening to foreign broadcasters tuned in to our 1161 frequency on January 24.
"You may wonder how on earth I could hear your stations this far," Kimmo Vuorela from Helsinki wrote."For the past 30 years DXing - trying to reach far away radio stations - has been my number one hobby.
"My equipment consists of a Perseus type communications receiver and an array of 3000 foot long antennas, one of which is pointing at your direction.
"Circumstances are ideal up in Finland's northern region Lapland, far above the Arctic Circle, because there is space for long antennas, and hardly any man-made electrical noise or interference.
"The weather outside can be as fierce as in Alaska, but I was happy to stay inside a tiny cabin (Aihkiniemi DX Camp), listening to AM radio signals from around the world."

I don't mind hearing that and giving it a try Jurgen. I didn't think my Perseus carrier monitoring was of much use as I don't know if I have the settings correct anymore. I forget so much these days - old age creeping on I think.

I attach a grab of the carriers and also a link to the file if the attachment doesn't work.

Assuming I have done this correctly, I understand CBG is currently on 1400.087, so I have adjusted the frequency scale in Photoshop so it lines up. This is, assuming the first "1400.00" is exactly 14.000 kHz.

Now I have done this, and overwritten some files on Photoshop, I don't even know which file I am attaching anymore. (My brain cell hurts) I am struggling to interpret everything now. I will just have to post this and if anybody wants to tell me if they see anything then I would happily accept any suggestions. Nothing beats a vocal ID of course but I have always found carrier monitoring to be a fascinating subject.

Attached:
Original screen grab
Photoshop Adapted grab

My brain needs a rest!

John

You forgot a '0'
mwoffset says: 1400.0087

Although that has moved now to about .0094

You screenshot isn't that helpful. A waterfall does not show the needed level details, a spectrum view is better. Also you zoomed in too much

This is what I got
http://dx.3sdesign.de/unid/Spectr-130314-2231-1400kHz.jpg
CBG is barely audible

Maybe .995 is WOND, there's no carrier at .991 anymore

Jurgen Bartels Suellwarden, N. Germany

My 0630 (last one) recording still had fair signals like 1510,
1510 had another EE mixing with WUFC, not sure who that was
maybe WRNJ ?

Is that from tonight 2131 or from morning 0500?

Here's mine for comparison:

Just thought I would give you all a update, I finally got a ID from 1430khz, and you were correct, John, it was CHTK from Toronto, they happen to have a Indian show during the week. Anyway, here is my ID "Sanjha Punjab Radio"

CHKT
<https://dl.dropbox.com/u/91837451/1430Khz%20%20CHKT%20TORONTO%2001.13UT\
C%2014TH%20MARCH%202013.mp3>

I understand that we have got magnectic storms due soon, so I guess we will have some down time again, which is a shame, as things were starting to hot up again.

Glad you caught an ID from CHKT. It's a tricky one to bag.

As I type, conditions sound quite promising. The forecast has been
updated to "quiet" conditions until the 17th.

I'll get there eventually Jurgen :O)

Do you by any chance have a screen grab of your controls when set for carrier monitoring? I just cannot remember how to get these right.

Thanks.

Remember I use SpecLab fed via VAC from Perseus in DRM mode.
That's probably too complicated for you?

If you want to use Perseus alone, then Mauno may tell you his setting, that
gives perfect images.

Here are the settings I use routinely. FFT is set to time to get maximal speed for waterfall. In software settings I us Waterfall AGC: Auto2 and Waterfall mode: Legacy. Sometimes, when specifically checking for carriers I go deeper with 3 kHz filter.

Thank you _*very*_ much Mauno and Jurgen for your help. This is looking much better. Interesting to see similarities in our grabs.

Regarding the FFT, I have it set to "Time".

John

From: John Faulkner, Skegness
Topic: 3738 Message: 3738

1300 0600 USA WJMO Cleveland OH. Reference to Praise 13 Hundred heard in the middle of
WDGJ ID. Soulful gospel singing after this, peaked
fair by 0601 5981 km

1300 0600 USA WGDJ Talk 1300, Rensselaer (NY) WDGJ Rensselaer
(pronounced Rensler) Talk 13
Hundred ID. Reference to presenters then ABC News
5392 km

Two more personal firsts, not heard by me here or back in darkest Nottinghamshire. The "Praise 13 Hundred" ID was difficult amid the WDGJ ID but the signal had peaked well by 0601 with some soulful Warbling Whitney type gospel vocals. And here was me thinking only the other day that I never hear anything other than WOOD on 1300!

If you are having difficulty hearing the ID on WDGJ then I made a recording of their top of the hour ID (which they cocked up slightly) and then played my recording afterwards:
https://www.box.com/s/ieo3r8d626iknxeyblty The third recording is that of Barry Davies in Carlisle who also heard WDGJ this morning. This was my attempt to mix all three recordings together for Real DX to demonstrate exactly what was being spoken.

I wouldn't be surprised if there are one or two other interesting catches in last night's recording. Just wish I had more time to go through it.

Good DX!

Lucky you John, I've got no chance on 1300Khz at my QTH, although I could certainly see the carrier.
Wasn't that good for myself, although I caught this ID on 1680Khz st 06.00UTC, that sounds like WQPM,? And I can't find any listings for that call sign.

Chances are it's my ears !, take a quick listen.

It's WTTM. They also mention Lindenwold afterwards, the city of licence.

Looks interesting again for tonight, despite last night's minor blow-out.

Good DX!

Nothing new here overnight. Conditions slightly down on yesterday morning.

The last audible North Americans hung on until 0700 with CHIN and KXEL on 1540.

There was a nice ID from WMOB 1360 at 0502:57 if anybody is still looking for this one.

Good DX!

Yes, that's it. I use a bit less colour to make carriers a bit narrower.
3 kHz filter at deepest resolution is better for such a bunch of
carriers, but audio becomes too muffled.
And calibration is about 5 Hz, but that yuo know already :-)

3745. Fox Sports - 1290 at 0400

Yahoo group: skywavesmw
Date: 2013-03-16 21:18:10 UTC
From: John Faulkner, Skegness
Topic: 3745 Message: 3745

Maybe somebody has this clearer. Something unusual on 1290 - "Fox sports, G0-0-0-0-0" ID on the hour at 0400.

Only real possibility would be WWTX Wilmington DE, but they would need to be on their listed day power of 2.5kW, as opposed to 32 watts.

The only other alternatives, according to Topaz, are:

KCUB Tucson AZ 1kW
WHKY Hickory NC 50/1kW
KOWB Laramie WY 5/1kW.

The signal is not clear enough to hear the local ID at my QTH, only the "Fox Sports, G-o-o-o-o" slogan. Hopefully somebody else has a better window on this one.

Good DX!

John

Hi John!
This is most probably CJBK who carries Fox Sports Radio.

Thanks Bernt.

I never thought of CJBK. I got my information from the Topaz website, which simply has CJBK listed as "Newstalk 1290". I just checked their website and you are correct. This is a pity as Delaware is quite a difficult state to catch.

Cheers

Hi John
Just checked my 0400 recording and at 0400 exactly I think I can hear
CJBK followed by ....W...CU ? I checked my 0400 recording from the 15th
and at 0400:16 I hear "fox sports GOOOO ! CJBK Fox 1290" ID
So slightly different so maybe someone else may have a better reception
to confirm things by 0401.10 Radio Puerto Cabello comes up to a good ID.

I thought I heard "Newstalk 12-90" before the Fox Sports .. Gooo ID but it's not clear enough. Well done on catching this one. 1290 has been an interesting channel this season but I haven't got a definite on the CJBK ID. Maybe tonight! Not sure what the W CU could be.

580 0204 CAN CFRA Ottawa ON. CFRA Weather update 5332 km
750 0400 USA WSB Atlanta GA. WSB ID heard clearly under CBGY 6725 km
1430 0400 CAN CHKT Toronto ON. Fairchild Radio ID 5668 km
570 0500 CUB Radio Reloj, Santa Clara. Time pips & RR morese ID 7387 km
940 0515 MEX XEQ B?same 940, M?xico City. Weak ID around 0515 and
Spanish OM &
Latin music. Offset at approximately 939.880 (I didn't
measure it).
Fair peaks too! 8904 km
740 0600 CAN CHCM Marystown NL. Pops, as 590 3914 km
1250 0600 CAN CJYE Oakville ON. Mention of sister station CJMR 5703 km

Seven firsts for me overnight!

Lots of other 'new' North American stations were heard but without ID. I also heard less common stations such as WHAS 840. WCRN 830 and I suspect WHAS 820. The lower part of the band was definitely better. 560 produced something with ABC News at 0400 and 570 had an English station at 0500 - with another painfully weak ID, sounding like WSYR - I didn't log it though. KMOX was good at times on 1120.

It's probably "goodbye" to high latitude DX for a few days following today's auroral activity.

Good DX!

3752. UNID North American 1540 at 0500

Yahoo group: skywavesmw
Date: 2013-03-19 10:25:01 UTC
From: John Faulkner, Skegness
Topic: 3752 Message: 3752

Conditions on MW have already started to recover. This has come as a big surprise after the recent auroral conditions.

I recorded overnight on the off chance that some Latin activity was present. On checking 1540 I heard a fair signal from KXEL Waterloo IA. If that wasn't a surprise, There was a clear CBS News jingle just after the KXEL ID, doubling with KXEL. I have never heard CBS News on 1540 before. The question is, who? WNWR are listed with China Radio International on Topaz. No other real options exist.

Good DX!

John

3753. Unid on 1570khz possible Radio Bethel

Yahoo group: skywavesmw
Date: 2013-03-20 18:43:10 UTC
From: scottishdxer_markborthwick
Topic: 3753 Message: 3753

Hi All
I have received this station this morning on 1570khz and I am hoping it
it Radio Bethel as it would be a new one for me, the off set matches
1570.001.
Below is the audio just wondering if anyone can confirm it is Bethel
with what is being said the jingle at the start I think I can hear
Bethel but not sure.
The clip was taken from the 06:00utc clip just in case anyone wants to
check their own recordings
Radio Bethel Audio ??
<https://dl.dropbox.com/u/49704474/Radio%20bethel.mp3>

Thanks in advance for the help
